PARLIAMENTARY MEETING
ON THE OCCASION OF THE UNITED NATIONS
CLIMATE CHANGE CONFERENCE
Paris (France), 5 and 6 December 2015
Organized jointly by the Inter-Parliamentary Union
and the French Parliament

Version 06.11.2015

Revised preliminary draft outcome document

Prepared by the Rapporteur of the Meeting, Senator Hervé Maurey (France)
following consultations held during the 133rd IPU Assembly

The Parliamentary Meeting in Paris is expected to adopt a succinct outcome
document, to be conveyed to the UN Climate Change Conference. The
constraints of the format of a two-day event are such that the draft must be
adopted by the Parliamentary Meeting without resorting to a vote or extensive
re-drafting. With this in mind, the IPU and the host Parliament have started a
process of broad consultations in the period leading up to the Meeting.

The Rapporteur of the Meeting in Paris, Senator Hervé Maurey (France), had
prepared a preliminary draft that had been circulated in advance of the 133rd
IPU Assembly and discussed by the IPU Standing Committee on Sustainable
Development, Finance and Trade at its session in Geneva on
19 October 2015. On that occasion, delegates made a number of
observations. A few other comments and suggestions were received by the
IPU Secretariat from international parliamentary assemblies and
organizations in writing. They were duly taken into account in the preparation
of a revised text, reproduced below as a basis for further work.

Parliaments are invited to submit their comments and amendments to the
current version of the draft by 20 November 2015, in electronic form, to the
IPU Secretariat (postbox@ipu.org). A revised version of the draft will be
posted on the IPU website on 25 November.

1. We, parliamentarians from around the world, gathered in Paris on the occasion of the
21st session of the Conference of the Parties to the United Nations Framework Convention on
Climate Change (COP21) and the 11th Meeting of the Parties to the Kyoto Protocol (CMP11),
forcefully reaffirm our concern over the consequences of climate change and our determination to
take account of it in our national laws.

2. Caused by human activity, climate change is now documented beyond dispute by solid
global and interdisciplinary scientific work. This scientific consensus on the existence of climatic
warming (according to the latest IPCC report the increase in the average world temperature could
be as high as 4.8°C by the end of the century); on a rise in sea levels (by up to 1 metre by 2100,
which would affect one of every 10 inhabitants on earth, i.e. 600 to 700 million people); and on an
increase in extreme weather events (droughts as well as more frequent and intense rainfall and an
expansion of desert zones). Climate change thus appears to represent a serious threat to the
planet.
3. The impact of climatic change is felt throughout the world. It is a global problem with major environmental, economic, social and political repercussions. It is a serious threat to access to water, food security, public health and biodiversity that could cause extensive forced migrations (between 50 and 150 million inhabitants will be displaced between now and the end of the century) that would threaten peace in the world.

4. The current trends will produce temperature increases well above 2°C between now and the end of the century. The acceleration of phenomena and of deterioration and change calls for courageous decisions by governments, parliaments and the international community, which must come together to confront one of the gravest threats known to the planet and to humanity.

5. In this context we reaffirm the urgency of reducing global greenhouse gas emissions and limiting the increase in average world temperature to less than 2°C relative to preindustrial levels, in line with the fundamental objective of the United Nations Framework Convention on Climate Change (UNFCCC) and as agreed by governments in the Copenhagen Agreement of 18 December 2009.

6. We reiterate our belief that the principles of equity, common but differentiated responsibilities and respective capabilities, depending on different national situations, are fundamental for multilateral action to address climate change and should be incorporated into the Paris Agreement.

7. We consider it imperative that the Paris Agreement be an accord by all and for all, a durable and dynamic agreement to fight effectively and accelerate action against climate change over the coming decades. This agreement must take into account the needs and capacity of developing countries, in particular the poorest and most vulnerable countries, facilitate the transformation of development trajectories in order to remain under the 2°C limit and help each country deal with the impact of climate change.

8. To that end, the agreement should cover the issues of mitigation, adaptation and means of implementation (financing, technology, capacity building) out of a concern for true transparency in the activities conducted by the countries, with a common framework defined to achieve this transparency.

9. The priority objective of adaptation should be to reduce vulnerability, in particular among countries most negatively affected by climate change, and especially the small island developing States (SIDS), including certain Pacific atolls, the countries of Africa, the least developed countries, and certain large megalopolises in coastal areas, and to achieve sustainable development that is resilient to climate change.

10. The interests of future generations require the promotion of ambitious mitigation measures, in favour of sustainable and diversified agriculture, renewable, non- and low-carbon emitting forms of energy, better energy efficiency, more effective management of forest and marine resources and the organization of access to water for all.

11. The financial provisions of the agreement should give priority to the financing of transition to low-carbon and climate change-resilient economies. We emphasize the need to intensify the mobilization of financial resources to achieve the objective fixed at Copenhagen of collecting $100 billion annually in public and private funds by the year 2020. Part of the response to this objective lies in the success of the Green Fund, whose creation was decided in Copenhagen, to serve as the main multilateral fund for the financing of this transition in developing countries. This fund needs to rapidly secure effective project financing while adhering to the principles of equity, transparency, and effectiveness.

12. Transfers of technology, knowledge, and good practices, and support for capacity building in developing countries are essential elements for climate change adaptation and mitigation. They should be the subject of concrete and measurable commitments.

13. We observe a troubling discrepancy between the global objectives for reduced greenhouse gas emissions and limited increases in average temperature on the one hand, and the national commitments undertaken to achieve those objectives on the other. We therefore reaffirm the importance of national contributions and commitments by every country to help achieve the global...
objectives. We undertake to exercise the greatest vigilance in finalizing and applying these contributions in each of our countries to achieve the development of clear and ambitious national legislation on climate and to urge governments to adapt that legislation based on the results obtained.

14. We support the approach of a solutions agenda to help strengthen the ambitions of all countries by offering solutions to be included as part of a low-carbon development strategy compatible with the 2°C objective, thanks to specific and broad initiatives on the part of nongovernmental actors added to the commitments undertaken by States. We consider it necessary for all governments and civil society actors (enterprises, local communities and NGOs) to support and strengthen this agenda for action, which is intended to put in place immediate measures without awaiting the entry into force of the Paris Agreement in 2020. Partnerships with stakeholders, and particularly local authorities, economic actors and NGOs, should be sought out and encouraged.

15. The proliferation of territorial measures to reduce greenhouse gas emissions is a major issue on the climate front. We support the commitments undertaken by local communities in the fight against climate change. The first to be impacted by the consequences of such change, the territories are and should be essential actors in transitioning towards a low-carbon or carbon-free economic model. Parliaments need to encourage and facilitate that effort.

16. In encouraging developers and initiators to accelerate their work we express the wish that the Paris Conference and subsequent meetings will help to generate momentum for the process and convey the message of economic and social opportunities as part of the fight against climate change. The Paris Agreement, like those to follow, must lead to real and concerted solutions.

17. The fight against climate change cannot be an obstacle to development. The two challenges must be met together. The Paris Agreement must be fully consistent with the sustainable development goals to be adopted in New York on 25 September 2015.

18. The search for innovative solutions in all areas—mitigation, adaptation, financing, technology transfer, transparency and capacity building—will be encouraged by parliaments. Among other activities, parliaments undertake to draw particular attention to the establishment of a carbon credit regime, among other relevant measures.

19. Parliamentarians have an essential role to play in contributing to the success of policies to combat climate change. They share part of the responsibility for their effective implementation. In developing, adopting and modifying legislation, in approving national budgets and in holding governments to account, they are a key part of the process for putting international agreements effectively in place. We therefore undertake to exercise our powers and responsibilities with the greatest vigour in the global fight against climate disruption.

20. We wish for contacts between parliaments to be a means of strengthening the parliamentary capacity for the implementation and monitoring of climate legislation and the dissemination of good practices. We shall ensure that questions related to climate change are systematically included on the agenda of inter-parliamentary meetings. The 22nd Conference of Parties to be held in Morocco in 2016 will provide an opportunity to take stock of the mobilizing role of parliaments in the fight against climate change. Cooperation should be developed between the IPU and the competent UN bodies to ensure follow-up of the Paris Agreement.

21. We request that our commitments, as set forth in this document, be attached to the Final Acts of the Paris Conference.
