

MAPPING REPORT

CLIMATE CHANGE LAWS AND POLICIES IN CLIMATE VULNERABLE FORUM (CVF) COUNTRIES

Prepared by:

G L O B E

The Global Legislators Organisation

UPDATED November 2022

MAPPING REPORT

CLIMATE CHANGE LAWS AND POLICIES IN CLIMATE VULNERABLE FORUM (CVF) COUNTRIES

NOW UPDATED FOR COP27

The Mapping Report has been updated for COP27 and now includes seven additional country profiles, bringing the total of CVF members profiled to 55.

The seven new countries covered in this special COP27 edition are: Uganda, Liberia, Guinea, Eswatini, Benin, Guyana and Nicaragua."

Originally published in June 2022. Updated for COP27 in November 2022.

About Climate Vulnerable Forum (CVF)

The CVF is an international forum for countries most threatened by climate change. Founded in 2009, it is composed of 55 members across five regions including Africa, Asia, the Caribbean, Latin America and the Pacific, and represents some 1.4 billion people worldwide. The Forum is led by a rotating chair for an ordinary period of two years, with Ghana currently chairing for the period 2022-2024. For more, visit: <https://thecvf.org/about/>

About GLOBE International

GLOBE International is a non-partisan, cross-party network of parliamentarians dedicated to improving governance for sustainable development. Established in 1991 by Senators Al Gore, John Kerry and their counterparts in the European Parliament, Russian Duma and Japanese Diet, GLOBE has grown to include legislators from every global region. GLOBE members have been instrumental in the establishment of legislation on climate change, biodiversity and natural resource protection in parliaments across the world. GLOBE International's current work includes supporting implementation of the Rio Conventions (climate change, biodiversity, desertification), the Sendai Framework on Disaster Risk Reduction and the UN Sustainable Development Goals. GLOBE also serves as the UNFCCC Focal Point for the Parliamentary Group. www.globelegislators.org

Foreword

As the world tries to tackle climate change, media stories often give great attention to the latest pronouncement by Presidents, Prime Ministers and high-level officials in governments. With all the focus on the executive branch, Parliaments and Parliamentarians are often ignored, sidelined or perhaps forgotten. But Parliaments - as the foremost democratic and legislative bodies in our nations - have a crucial role to play. We represent the people, make laws, and scrutinise and provide oversight over governments and the executive bureaucracy as they implement national policies. This is the primary role assigned by the people, through election of Parliamentarians, and by the constitutions of democratic economies.

On climate, many Parliaments have been taking the lead, by framing and passing climate legislation which legally mandates governments to meet specific ambitious climate targets. As these policies are implemented, Parliaments are involved at every stage of the process. These range from framing energy regulatory systems to delivering feed in tariffs and power purchasing agreements, to preventing corruption and ensuring gender equity and strong participation by the youth.

In some of our Parliaments we have already passed strong climate legislation with binding targets and mandating governments to present carbon budgets to lawmakers on an annual basis. Several Climate Vulnerable Forum countries have already passed or are working on passing similar legislation. In this report you will find the latest developments in parliamentary climate legislation in 55 CVF member countries. Reviewing these laws and regulations, we were reminded of just what a crucial role Parliaments have to play - and just how far we still have to go. At the same time, we remind the globe of the importance of Parliamentarians in the climate policy process and the need for our participation at all levels.

There is still insufficient legislative attention given to climate change in many countries, and we have to urgently change this situation if we are to push our governments to meet the goals set out in the Paris Agreement. We hope this report will add to the urgency of this collective effort, and provide much-needed guidance for legislators moving forward to tackle climate issues.

Hon. Dr. Emmanuel Marfo

Chairperson of the CVF Global Parliamentary Group, and Chairperson of the Environment, Science and Technology Committee, Parliament of Ghana

Hon. Mohamed Nasheed

Former President of Maldives and speaker of the Maldives parliament, the Peoples' Majlis, and Ambassador for Ambition of the Climate Vulnerable Forum.

Hon. Loren Legarda

Senator, House of Representatives, Republic of the Philippines and Ambassador for Parliaments of the Climate Vulnerable Forum

Hon. Saber Hossain Chowdhury, MP

Honorary President, Inter-Parliamentary Union Chairman, Standing Committee on Ministry of Environment Forest and Climate Change, Government of Bangladesh

Executive Summary

The first edition of the CVF Climate Laws & Policies Mapping Report emerged from conversations with former President Nasheed at the GLOBE COP26 Legislators Summit at the Scottish Parliament in Edinburgh in November 2021. The Climate Vulnerable Forum (CVF) has since its inception in 2009 played a formidable role in global climate diplomacy and COP26 was no exception. Moral advocacy aside, CVF members have also added to the growing volume of climate change laws and seek to learn from and innovate the most effective legislative responses to the climate crisis, on which they are on the frontlines.

As the CVF seeks to support more proactive engagement by member parliaments to strengthen legislative frameworks and exercise more effective scrutiny of government climate commitments in the post-Glasgow era, GLOBE is well-positioned to act as a knowledge partner to support these efforts across CVF parliaments. Including in its role as the Focal Point for the UNFCCC Informal Parliamentary Group.

Since COP3 in Kyoto in 1997, climate change laws around the world have grown from some 52 in number to more than 2500 today. GLOBE has documented the growth of this global architecture of climate change legislation for many years, with GLOBE members playing a key role in championing legislation in many countries. What began with the annual GLOBE climate legislation reports has now developed into the substantive LSE Grantham database of climate laws of the world, which this study draws on and refines further.

This Mapping Report is the first time that the climate change laws and policies of 55 CVF members have been brought together in one place. The objective is to facilitate peer to peer learning, identify gaps and promote best practice. The Report is designed to serve as a reference point and input to capacity building workshops and trainings on climate change legislative development that will help countries implement their NDCs and climate targets more effectively.

In addition to documenting climate change legislation, the report includes key policies and targets, such as Nationally Determined Contributions (NDCs) and net zero targets. It also includes reference to climate change litigation and ranking produced by the Climate Action Tracker. Given the significance of political context and multilevel governance, both the national constitutional framework as well as sub-national (where known) are included.

The initial analysis shows that 84% of CVF members have climate change laws with more than $\frac{3}{4}$ having adopted or considering net zero targets. More than half seek to integrate mitigation but links to adaptation and resilience are weaker, with 57% containing no reference to adaptation and 70% no reference to resilience in climate laws and policies. This suggests one vital area for legislative and related improvements. As CVF members prepare for COP27 in Egypt and accelerate implementation of the Paris and Glasgow commitments, this Mapping Report demonstrates their resolve and will provide a valuable reference point and inform the development of additional measures such as the CVF Climate Prosperity Plans.

Malini Mehra

Chief Executive, GLOBE International secretariat

1. Introduction to the mapping report

In the wake of COP26, as nations reflect on the outcomes of the Glasgow Climate Pact and the numerous pledges and partnerships launched, it will be for national legislatures to hold governments to account for promises made. Without national legislative frameworks and enforcement mechanisms, governmental promises run the risk of being paper tigers. Many climate vulnerable nations, despite having contributed least to the climate crisis, have raised the game through their moral courage and political leadership. Numerous members of the Climate Vulnerable Forum (CVF) have committed to low-carbon or net zero pathways in their NDCs. Now is the time to anchor these commitments in domestic legislation to ensure follow-through and attract donor support and foreign direct investment for implementation. This project provides an initial mapping of climate change laws and policies in CVF countries to support this process as part of a multi-year programme of work by CVF Parliament, in partnership with GLOBE International.

Aims

Although the Paris Agreement does not explicitly mention the role of legislators in addressing climate change, other than 'recognizing the importance of the engagements of all levels of government and various actors, in accordance with respective national legislations', GLOBE legislators, including many CVF leaders over the years, have demonstrated the importance of national leadership to develop appropriate domestic climate change legislative frameworks, and exercised their constitutional duties of law-making, scrutiny and budgetary approval to hold governments to account as elected representatives of the people.

As Paris had done, and Copenhagen before that, the post-COP26 period will see yet another surge of law-making in parliaments across the world on climate change to establish national legal frameworks for mitigation, adaptation, disaster risk reduction, resilience, and other related policies and measures. This mapping report provides the first overview of what is currently in place in 55 CVF member countries to support comparative analysis, benchmarking, and best / better practice adoption. The mapping report is aimed at providing a standardized resource that will inform future research. Against the backdrop of this report, future research may respond to the following questions: how can existing best practice be learnt from, given the fact that the oldest climate change framework laws date back to the late-2000s? Are there model climate change legislative frameworks,

institutions and practices that can be readily adopted or adapted? What lessons can be learnt – not just for CVF members, who only account for 5% of global GHG emissions, but also for larger emitting nations?

This project seeks to support responses to these questions and to further support CVF Parliament members in developing greater awareness and building capacity to respond to climate change. In this first phase, this mapping report will be used as an input for awareness raising and capacity building workshops for CVF member parliaments, learning from good/ better/ best practice within the network through peer-to-peer learning, with a view to strengthening parliamentary engagement and performance on climate change across the membership. The project will also draw on GLOBE's familiarity with climate change and related legislation in other geographies and jurisdictions to inform learning and improve on existing models and practice.

2. Summary of initial analysis

This mapping report provides an overview of national climate change and related legislation and policies in 55 CVF member countries. Importantly it places these in the context of national governance and constitutional arrangements, as well as, where known, sub-national arrangements. In addition, the overview includes features such as the country's contribution to global greenhouse gas emissions, population size, net zero policies, climate change lawsuits, the Human Development Index ranking, the Economist Intelligence Unit (EIU) Democracy Index and the Climate Action Tracker ranking of the country.

This information is designed to present a more complete picture, in proper governance context, to inform legal and policy development, than currently available in key source material such as the Grantham Research Institute's Climate Change Laws of the World.

The initial analysis suggests diversity across the network, but also that most members already have some form or another of climate change legislation in place. Nine members - Comoros, Eswatini, Lebanon, South Sudan, Sudan, Guyana, Marshall Islands, Grenada and Haiti - have no climate change laws in place. The majority have national climate laws, strategies, policies and targets in place; 9% have self-declared net zero and in 53% have net zero policies under consideration.

In the vast majority, these date from adoption of the Paris Agreement in 2015, which drove the largest surge of climate change legislative development. In some countries, climate change legislation has been driven by air pollution concerns as in Mongolia, in others it is linked with renewable energy, agriculture, water, forestry or land-use policies as in Senegal, Rwanda, Morocco and Lebanon. In Nepal, the national climate act came about as the result of a Supreme Court order due to a successful civilian lawsuit. In Columbia, climate legislation provides guidance for multilevel governance on climate change from national government to subnational municipalities and districts.

Disaster risk reduction in the context of climate change is a key theme for a number of members. From Tuvalu, the smallest of the CVF nations in terms of population, which has a

Climate Change and Disaster Survival Fund Act to address climate-related disasters effectively. To the Philippines, which has a comprehensive framework for integrating climate change and disaster risk reduction into policies, development plans, poverty reduction strategies and other development tools.

The report highlights each country's rank on the Human Development Index. If a country's Human Development Index rank is particularly low, the report flags this in the "Issues & Challenges" section of a country's profile. This low ranking poses a potential risk and challenge to developing countries in promoting climate change policies and laws that support both equity and sustainability. Climate resilience, as is the case with the Philippines' comprehensive framework referred to earlier, ought to permeate through policy measures, development plans and poverty reduction strategies.

Countries such as Bangladesh and the Maldives provide examples of further policy and legislative innovation, with the former's Climate Fiscal Framework 2014 seeking to harmonise climate-related financing across government departments, and the latter's Climate Emergency Act 2021 incorporating legally binding targets and carbon budgets.

Given the diversity of approaches, the report suggests identifying some key features of climate laws and policies that could form the core of legislative responses to the climate emergency across jurisdictions and help deliver the Glasgow Pact.

BENIN

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
1	4	0	35	12.45m	0.06%	N/A

SUMMARY

Benin's national climate framework consists of 1 law, 4 policies and 35 targets. Benin's [Law no 2018/18 Regulating Climate Change Actions](#) aims to combat climate change and increase the resilience of communities through adaptation and mitigation measures. The law sets objectives for sustainable development, security and energy efficiency, following national and international legal instruments. Benin's [National Development Plan \(PND\) 2018-2025](#) policy includes the environment and climate change within its major themes. Benin suffered from catastrophic floods in 2019 and as of October 2022, is still suffering from the effects of severe flooding since September 2022. Climate change impacts in Benin include the threat of deteriorating ecosystems and natural resources, coastal erosion, lost livelihoods and income, notably in agriculture, and the degradation of infrastructure.

- Ranked 158 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Benin is a presidential representative democracy republic where the president is the head of state and head of the government. Only two parties - both allied to the president - ran in the 2019 elections (run under a new electoral code), down from 20 parties in 2015. The National Assembly is the parliament of Benin and consists of 83 directly elected members, six of whom are currently women. The president is elected for a five year term and can only serve two terms.

CONSTITUTION

In 2018, the president introduced constitutional reforms which would have included a gender quota and extended the parliamentary mandate from four to five years. However these reforms did not get the required majority in the National Assembly. The 1990 constitution states men and women are equal before the law and states: "The State shall assure to everyone equality before the law without distinction of origin, of race, of sex, of religion, of political opinion or of social position."

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Law no 2018/18 Regulating Climate Change Actions](#). According to the [SDG Knowledge Hub by IIISD](#): "Benin's climate legislation aims to combat climate change and its negative impacts and increase the resilience of communities, as well as to enable effective response, adaptation and mitigation measures by setting objectives for sustainable development, security and energy efficiency, in accordance with national and international legal instruments related to climate change. The law requires that, going forward, all national- and local-level development strategies and programmes incorporate climate change." The law further sets out a carbon tax.

Policies:

A paper for a 2030 vision of Benin which has a focus on climate change has been mentioned in [Council of Ministers' minutes](#) from February 2021, however the paper itself is unavailable online.

[National Development Plan \(PND\) 2018-2025](#). This plan is structured around major themes including the environment and climate change. The plan seeks to adopt more sectoral policies in its approach to development, land use and pressures on natural resources to ensure the effectiveness of spatial management instruments and to develop good practice in environmental governance and territorial management.

[Low Carbon and Climate Change Resilient Development Strategy 2016 - 2025](#). Responds to Benin's need to address climate change impacts, in particular the identification and adoption of adaptation measures as well as reducing GHG emissions. The strategy is split into three objectives: strengthening the resilience of local communities and economic production systems, reducing GHG and strengthening the protection of communities. Finance mobilisation for these measures is also discussed.

[Decree No. 2003-142 of 30 April 2003 on the Establishment, Powers and Functioning of the National Committee on Climate Change](#). The Committee is in charge of following and implementing UNFCCC-related work and to carry out climate change research.

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS

Laws:

[Law no 2018/18 Regulating Climate Change Actions](#). Local-level development strategies and programmes should incorporate climate change. The law promotes sub-regional, regional and international cooperation to ensure preservation and improvement of the management of biological and geological systems.

NET ZERO TARGET

2000 - achieved (self-declared).

CLIMATE ACTION TRACKER RATING

N/A.

ISSUES & CHALLENGES

According to [NAP Global Network](#): "The impacts of climate change are already being felt today by the people of Benin, and the projected consequences are concerning. Benin faces current and future threats of deteriorating ecosystems and natural resources, coastal erosion, lost agricultural production, lost livelihoods and income, degradation of infrastructure, weakening of health and socio-economic services, and communities being displaced.." Benin suffered from catastrophic floods in 2019 and as of October 2022, is still suffering from the effects of severe flooding since September 2022.

BURKINA FASO

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	8	0	21	20.9m	0.08%	N/A

SUMMARY

Burkina Faso's national climate framework consists of 4 laws, 8 policies and 21 targets. Title II of the 2013 [Code for the Environment Law](#) focuses on climate change, the maintenance of ecological balances and improving the living environment. [The 2014 concerning framework law on sustainable development](#) contains provisions which guide the implementation of sustainable development in a manner which is beneficial to present generations without compromising the needs of future generations. Most national policies focus on sustainable development and adaptation, including fighting land degradation, sustainable energy systems and protecting carbon sequestration sources. A [decree](#) passed in 2015 approves the country's National Adaptation Plan for Climate Change, which intends to reduce the vulnerability of Burkina Faso to the effects of climate change and increase its resilience through modifying development policies to cope with mitigation and adaptation.

- Ranked 182 on the [Human Development Index](#).

CONSTITUTIONAL SYSTEM

- Burkina Faso was a semi-presidential, multi-party system where the President is the head of state and the Prime Minister is the head of government, respectively.
- In January 2022, the President was ousted by the army, which suspended the 1991 constitution, dissolved the government and the 127 member National Assembly. Parts of the constitution were restored a week later.
- In March 2022, a national forum on transition adopted a transitional constitutional charter that provides for a 36-month transition period and the formation of a 71-member Transitional Legislative Assembly, who were appointed the same month.

CONSTITUTION

Approved by referendum in 1991. Last revised in 2018. Certain rights are enshrined in the revised wording, such as access to drinking water, decent housing and a recognition of the right to civil disobedience.

CLIMATE POLICIES AT NATIONAL LEVEL

4 Climate Laws:

1. [2014 law to prevent and manage risks, humanitarian crises & disasters](#), whatever their nature, origin & extent.
2. [2014 framework law on sustainable development](#): General rules for guiding implementation of sustainable development.
3. [2013 Code for the Environment](#): The Code provides that the government must take action on adverse effects of climate change, the maintenance of ecological balances & improving the living environment. In addition to this, the government must adapt the occupation of the national territory to the requirements of climate change.
4. [2013 law of Finance](#) excludes certain solar equipment from customs & VAT taxes.

Climate policies:

Most policies focus on sustainable development & adaptation, including fighting land degradation, sustainable energy systems, protecting carbon sequestration sources, modifying development policies to cope with mitigation & adaptation. [2015 National Adaptation Plan for Climate Change](#). Disaster preparedness & response. [2013 National Council for the Environment & Sustainable Development](#). Scope includes adaptation, conservation of biodiversity, and investment in sustainable land management. [Useful link to 2021 Climate Centre report](#).

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Under Article 31 of the Constitution (last revised in 2015), Burkina Faso is a Unitary State made up of territorial collectives. The Constitution also makes provision under Article 101 that the law establishes the rules and fundamental principles of the free administration of the territorial collectives, their competencies and their resources.

The [2015 National Adaptation Plan](#) refers to integrating climate change adaptation into subnational development.

NET ZERO TARGET

A net zero target of 2050 has been proposed and/or is in discussion.

CLIMATE ACTION TRACKER RATING

N/A.

ISSUES & CHALLENGES

- Ranked 182 on the [Human Development Index](#).
- Scarce water resources are being hit by drought.
- East and South West parts of the country which usually have more favourable weather are increasingly being hit by drought, which will reduce agricultural productivity.
- Higher temperatures are expected which increases the risks of forest and bush fires.
- [3.5m are in need of humanitarian assistance](#).
- There is an ongoing threat of violent extremism.

The UNDP identified 4 challenges: deforestation, desertification, low rainfall & extreme weather events.

COMOROS

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	1	0	17	869 595	0.0%	N/A

SUMMARY

The Comoros's national climate framework consists of 0 laws, 1 policy and 17 climate targets. The 2014 [Accelerated Growth and Sustainable Development Strategy 2015-2019](#) detailed measures to be taken by the government to decrease vulnerability to climate change related disasters, promote the green economy and raise public awareness of climate change. This policy contained a target to increase forest cover by 6% by 2019 against a 2015 baseline. Climate change is leading to a reduction in dry season rainfall, as well as an increase in cyclone activity during the wet season. Most of the population lives in coastal areas and are vulnerable to sea level rise and natural disasters.

- Ranked 156 on the [Human Development Index](#).

CONSTITUTIONAL SYSTEM

- Federal presidential republic, whereby the President of the Comoros is both head of state and head of government, and of a multi-party system.
- Executive power is exercised by the government.
- Federal legislative power is vested in both the government and parliament.
- According to Article 52 of the Comoros Constitution (2001 Constitution as amended in 2018) the presidency of the Union rotates between the islands. Each Island enjoys free administration and autonomy of management (Article 99) and is led administratively by a Governor. The Governor is assisted by a cabinet and certain matters fall within the exclusive competence of the islands including economic planning and development of the island territory amongst others (Article 102).

CONSTITUTION

The [Constitution](#) of the Union of the Comoros was ratified by referendum on 23 December 2001, and the islands' constitutions and executives were elected in the following months. It had previously been considered a military dictatorship, and the first peaceful transfer of power in Comorian history is said to have occurred in 2006. The Constitution was last amended in 2018. The preamble of the constitution guarantees an Islamic inspiration in governance, a commitment to human rights, and several specific enumerated rights, democracy, and "a common destiny" for all Comorians.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

None

Policies:

2014 [Accelerated Growth and Sustainable Development Strategy 2015-2019](#)

Aims to strengthen the social, economic & environmental situation. It details specific measures to be taken by the government to achieve such development, notably regarding land degradation, vulnerability to climate change related disasters, the promotion of a green economy, and raising public awareness to climate change. Further promotes sustainable production in sectors such as agriculture, tourism and energy. Policies/targets: large project alongside the Green Climate Fund and UNDP announced to increase resilient water supply. Has set [objective](#) of being a carbon sink. Current and planned adaptation: enforce regulations for restoration of degraded areas, increase involvement of women in environmental decision making, build resilience, [Strengthening](#) the capacity and resilience of the agricultural sector.

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Under Article 102 of the Comoros Constitution the following matters fall within the exclusive competence of the islands: economic planning and social development of the island; the development of the island territory; the acquisition of assets for the needs of the island; road maintenance; fairs and markets amongst others.

These exclusive competences may present challenges relating to conflicts of competence between the union and the authorities in the various islands. It has been argued that the political and institutional systems developed by the constitution continue to contribute towards state fragility. See: [Priority Plan for Peace Building in the Comoros](#) p. 4 at para 12.

[NET ZERO TARGET](#)

A net zero target of 2050 has been proposed and/or is in discussion.

CLIMATE ACTION TRACKER RATING

N/A.

ISSUES & CHALLENGES

- Reduction in dry season rainfall, increase in wet season rainfall and increased cyclone activity. Access to surface water is a challenge, with some islands being reliant on rainfall only as there are limited to no groundwater resources.
- Comoros is marred by various secession attempts, constitutional changes and political instability which presents challenges for formal institutions to take root. See: [2019 World Bank Report Towards a More United & Prosperous Union of Comoros Systematic Country Diagnostic](#)
- Ranked 156 on Human Development Index.
- [Hazards](#) also include temperature increase, sea level rise, change in wind regime & ocean acidification.
- Majority of the population lives in coastal areas.

DEMOCRATIC REPUBLIC OF CONGO

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	2	0	2	89.56m	0.47%	N/A

SUMMARY

The DRC's national climate framework consists of 3 laws, 2 policies and 2 climate targets. The 2014 [Law on Protection of the Nature](#) mandates the government to take into account the potential value of carbon sequestration services for climate change mitigation. According to the [Africa NDC Hub](#), insufficient funding for the implementation of large-scale strategies and action plans remains a key issue. The DRC's [updated NDC](#) (28/12/2021) improved their total GHG emission reduction target from 17% to 21% by 2030 compared to BAU. Of the 21%, 19% is conditional and 2% is unconditional.

- Ranked 175 on the Human Development Index.

CONSTITUTIONAL SYSTEM

- Bicameral parliamentary system.
- Legislative power belongs to the National Assembly & Senate.
- 108 members of the Senate elected by provincial assemblies (since 2007).
- 500 members of the National Assembly. The election system is a mixed system by way of proportional representation in constituencies with 2 or more seats to fill and by simple majority for constituencies with one seat to fill.
- Members of both elected for 5 year terms.
- The President is the head of state & appoints the cabinet. The Prime Minister is the head of government.

CONSTITUTION

- [Constitution](#) adopted in 2006 & ratified in 2011.
- Establishes strict separation between laws & regulations.
- Laws determine general principles and rules in domains explicitly quoted in the Constitution, such as civil or economic rights. After a law is approved by both houses, it is sent to the President to sign.
- Regulations establish rules outside of the law's domain determined by the Constitution or specify the implementation of the law.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

Promote energy efficiency and sound policies.

The [2014 law on Protection of the Nature](#) aims to adapt the DRC legal order of protection of nature to modern principles on biological and genetic resources management and to requirements of international conventions, including among others the Treaty on protection and sustainable management of forestry ecosystems in Central Africa.

Rational management of forest resources, taking into account carbon sequestration potential.

[2011 Fundamental Agricultural Law](#). Shift energy mix towards renewables. Support sustainable development, improve agricultural production & provide food self sufficiency.

[2010 Disaster Relief Organisation Plan](#): includes developing a repository of risks and their effects on human life, infrastructure, and the environment.

[Establishment of management structure of implementing REDD process.](#)

This decree establishes the following management structures: National REDD Committee and Inter-ministerial REDD Committee (to ensure multi-sectoral co-ordination in the preparation and implementation of the national REDD+ strategy); National REDD Co-ordination (in charge of daily management of the REDD Readiness process).

Policies:

From NDC: reduce GHG emissions by 17% (in relation to GHG emissions BAU levels (2000)) by 2030 conditional to external support in sectors of agriculture, forestry and energy.

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

The [Constitution](#) in terms of Article 204 places certain matters in the exclusive competence of the provinces. These include the drafting, adoption and implementation of policies aimed at conserving nature; the exploitation of non-nuclear sources of energy and the production of water for the needs of the province; provincial planning and provincial public finances amongst others.

201 [Protection of the Nature](#) law calls on central and regional governments to adopt and implement policies, plans and programmes promoting the contribution of natural and biological resources and ecosystems to the economic growth, rural development, fight against poverty and regulation of the climate.

NET ZERO TARGET

No target.

CLIMATE ACTION TRACKER RATING

N/A.

ISSUES & CHALLENGES

On the DRC, the [Africa NDC Hub](#) states “The integration of environmental concerns, including climate change, in all sectoral strategies and national development planning remains a key issue due to insufficient funding, both internal and external, for the effective implementation of large-scale strategies and action plans, as well as major legal and institutional impediments.”

Ranked 175 on the Human Development Index.

Eswatini

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
6	11	0	27	115m	0.4%	Almost Sufficient

SUMMARY

Eswatini's national climate framework consists of 0 climate laws, 7 policies and 4 targets. Eswatini's [National Climate Change Policy 2016](#) lays out strategies to ensure a climate resilient, sustainable and inclusive low-carbon green growth society. The [National Development Plan 2019/20 - 2021/2022](#) states that natural resources must be used sustainably and greater resilience to natural disasters and climate change risks must be developed. The plan includes examples of key projects and feasibility studies. Eswatini experiences seasonal flooding and periods of drought which are further exacerbating the country's existing challenges of food insecurity.

- Ranked 138 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Eswatini is an absolute monarchy, where the King holds supreme executive, legislative and judicial powers and is the head of state. [The Prime Minister is appointed](#) by the King with the recommendation of the King's Advisory Council from the House of Assembly. The parliament is bicameral and consists of the House of Assembly and the Senate. 10 members of the House of Assembly are appointed by the head of state with 59 being directly elected. The Senate comprises 10 members who are elected by the House of Assembly and 20 members who are appointed by the head of state, at least 8 of whom must be women. Political parties are banned so candidates stand as independents.

CONSTITUTION

The 2005 constitution stipulates that one woman from each of the four regions of the country is elected by the House of Assembly if the number of women in parliament (House of Assembly and the Senate) is less than 30%. The constitution is the supreme law and sets out that the King is a hereditary head of state.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National Development Plan 2019/20 - 2021/2022](#). Strategic goals of the plan include managing natural resources and environmental sustainability, with resilience to climate change. Policy directions should be towards renewable and clean energy sources and mainstreaming climate change and environmental sustainability into projects. The plan states that natural resources must be used sustainably and greater resilience to natural disasters and climate change risks must be developed. Key projects include feasibility studies for power generation along the Ngwempisi River and compiling environmental statistics and accounts to incorporate into national accounts and planning procedures.

[Energy Master Plan 2034 \(2018\)](#). Of Eswatini's four climate change mitigation action in their 2015 INDC, two are energy related and include doubling the share of renewable energy in the energy mix, and introducing an ethanol blend in petrol of at least 10% by 2030.

[Vision 2022 - National Development Strategy \(2016\)](#). Aims includes boosting afforestation efforts and assessing how renewable energy projects can be implemented.

[National Climate Change Policy 2016](#). Lays out strategies to ensure a climate resilient, sustainable and inclusive low-carbon green growth society. Seeks to ensure responses to climate change by stakeholders are coordinated and integrated into the country's social and economic development. Objectives of this policy include enhancing climate resilient and low-carbon green growth investments and raising public awareness of climate change and its impacts.

[National Energy Policy \(2003\)](#). Discusses developing a renewable energy information programme and supports and promotes the dissemination of renewable energy technology information.

- [Swaziland Environment Action Plan \(1997\)](#). Has a section dedicated to the UNFCCC which had been ratified.

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS

Policies:

[National Energy Policy \(2003\)](#). Establishes local energy committees within local communities that are setup by local authorities with the help of relevant NGOs and Regional Energy Units, with the reasoning that local communities are best placed to address energy issues that affect their community/area. The committees can educate and raise awareness as well as feed back to regional and national authorities.

NET ZERO TARGET

No net zero target.

<u>CLIMATE ACTION TRACKER RATING</u>	
N/A	
ISSUES & CHALLENGES	
<p>Eswatini suffers from recurring droughts, affecting the agriculture sector amongst others. In the section of the National Development Plan 2019/20 - 2021/2022 which addresses health, the plan states: "despite substantial donor financing, there are challenges in meetings [sic] some of the SDGs that are health related, like maternal, neonatal and child health." Prevention Web states: "Eswatini is at high risk of natural hazards, which are expected to primarily affect the agricultural sector, through seasonal flooding and periods of drought. The country experiences natural hazards, such as violent storms and persistence [sic] drought, which is further exacerbating the country's existing challenges of food insecurity, ability to attain development goals."</p>	

ETHIOPIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
6	11	0	27	115m	0.4%	Almost Sufficient

SUMMARY

Ethiopia's national climate framework consists of 6 laws, 11 policies and 27 climate targets. The 10-year development plan policy (passed in 2020) is based on 10 pillars, pillar 6 of which is to build a climate resilient and green economy. Measures included in the policy seek to increase basin development efforts to fight land degradation and reduce pollution, as well as reducing GHG emissions, increasing forest cover and increase electricity production from renewable sources for domestic use and for export. Other policies set targets for increasing forest cover and for energy generation from renewables. The Ethiopian Programme of Adaptation to Climate Change (EPACC) (passed in 2010) calls for climate change to be considered in decision-making at a national level. The CAT gives Ethiopia an overall rating of "Almost Sufficient", indicating that its climate commitments are not yet consistent with the Paris Agreement's 1.5°C temperature limit but could be with moderate improvements. On Ethiopia's policies and action, the CAT gives a "1.5°C Paris Agreement Compatible" rating, with Ethiopia rating well compared to what its fair share contribution is, but notes that its policies and action are not sufficient when compared with what modelled domestic pathways based on global least cost pathways say should be occurring within its borders. It suggests additional support is needed to implement additional policies.

- Ranked 173 on the Human Development Index

CONSTITUTIONAL SYSTEM

- Federal parliamentary republic.
- Bicameral system - upper house known as House of Federation (HOF) and Lower House known as House of People's Representatives (HPR). The HPR has 550 members who are elected every 5 years. A minimum of 20 seats are reserved for minority nationalities and peoples. HPR is main legislative authority by issuing laws.

- HOF serves as a representative house for nations, nationalities and people - each recognised ethnic-national group has one representative and an additional rep for every million of its population. Members elected by State Councils. Does not have general legislative powers but interprets the constitution, issues of self-determination, disputes among states & distribution of federal and state revenues.

CONSTITUTION

- Constitution adopted in 1994
- The Constitution establishes a Federal and Democratic State
- The State has the obligation in terms of the constitution to allocate ever increasing resources to provide to the public health, education and other social services.

The Constitution of Ethiopia further recognizes the right of the Peoples of Ethiopia to improved living standards and to sustainable development. Nationals have the right to participate in national development and to be consulted with respect to policies and projects affecting their community. All international agreements and relations concluded, established or conducted by the State shall protect and ensure Ethiopia's right to sustainable development. (Article 43).

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Formation of Ethiopian Energy Authority](#) (2014). Duties include formulating energy efficiency & conservation strategies.

[Rural electrification fund](#) (2003) provides loans and technical services, particularly for projects with renewable energy sources and to encourage utilisation of energy for production and social welfare services in rural areas.

Policies:

[10 year development plan](#), passed in 2020. Based on 10 pillars. Pillar 6 is to build a climate resilient, green economy. It seeks to increase basin development efforts to fight land degradation and to reduce pollutions, improve productivity and reduce GHG emissions, increase forest protection and development, increase production of electricity from renewable sources for domestic use and for export, and focus on modern and energy saving technologies.

[Growth & Transformation Plan \(2016\)](#). Covered 2015-2020. Aimed to increase forest coverage by 15.5% to 20% as well as setting targets for energy generation from renewables and biofuels. The Plan focused on improving the macroeconomic indicators, sectoral economic development plans, infrastructure, human and technology capacity building, good governance and cross cutting issues.

[National Disaster Risk Management](#) (2013) policy recognises vulnerability caused by climate change as a cross-cutting issue.

[Climate Resilient Green Economy Strategy \(2011\)](#). Outlines 4 pillars: agriculture (improve production, security and reduce emissions), deforestation (protect & re-establish), power

(expand renewable generation) & transportation (leapfrogging to modern, energy efficient tech).

- [Ethiopian Programme of Adaptation to Climate Change \(2010\)](#). Mainstreaming of climate change into decision making at national level.

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

According to Article 52 of the 1994 Constitution, states are reserved with all powers not given expressly to the Federal Government alone, or concurrently to the Federal Government and the States. States therefore have powers and functions to formulate and execute economic, social and development policies, strategies and plans of the State and to administer land and other natural resources in accordance with Federal Laws, amongst others.

NET ZERO TARGET

No target.

CLIMATE ACTION TRACKER RATING

"The "Almost sufficient" rating indicates that Ethiopia's climate commitments are not yet consistent with the Paris Agreement's 1.5°C temperature limit but could be with moderate improvements. Ethiopia's policies and unconditional target ("fair share target") meet its fair share contribution to limiting warming to 1.5°C. However, Ethiopia's conditional target ("internationally supported target") is currently only compatible with 4°C of warming, and should be strengthened. Ethiopia needs additional support to implement additional policies and meet its conditional target."

ISSUES & CHALLENGES

- Land use & forestry are a considerable source of emissions.
- From the Climate Action Tracker: The CAT rates Ethiopia's conditional target as "Highly insufficient" when compared to modelled domestic pathways. The "Highly insufficient" rating indicates that Ethiopia's internationally supported target in 2030 leads to rising, rather than falling, emissions.
- Ranked 173 on the Human Development Index.
- Large agricultural sector at high risk from droughts and floods.

GAMBIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	6	0	29	2.417m	0.01 %	Almost Sufficient

SUMMARY

Gambia's national climate framework consists of 2 climate laws, 6 policies and 29 targets. Whilst neither of the 2 laws specifically mention climate change, they do relate to energy production, with the [Renewable Energy Act 2013](#) promoting renewable energy resources in Gambia. [The Gambia 2050 Climate Vision](#) (2021) policy sets a net zero emission target of 2050 and sets out the government's strategy to meet commitments made under the Paris Agreement. Policy actions include climate-resilient food and landscapes as well as a climate-aware integrated coastal zone management. The 2016 [Climate Change National Policy](#) seeks to mainstream climate change into national planning, budgeting, decision-making and programme implementation. After a review of Gambia's second NDC, the CAT changed its rating from "1.5°C Paris Agreement compatible" to "Almost Sufficient", noting that Gambia had not increased its ambition.

- Ranked 172 on Human Development Index.

CONSTITUTIONAL SYSTEM

- Presidential republic. The President is head of state and head of government, and of a multi-party system. The President elected by popular vote for 5-year term. Number of terms not restricted. President appoints members of cabinet.
- Executive power is exercised by the government.
- Legislative power is vested in both government and parliaments.
- The Parliament is unicameral. The National Assembly has 53 members of which 48 members are elected for a 5 year term and 4 members are appointed.

CONSTITUTION

1996 Constitution provides for a presidential system, unicameral legislature, independent judiciary & protection of human rights. The Constitution provides that the state pursues policies

protecting the environment for posterity and for co-operation with other nations and bodies to protect the global environment.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Renewable Energy Act 2013](#). Establishes the legal, economic and institutional basis to promote the use of renewable energy resources. Establishes Renewable Energy Fund.

Policies:

[2050 Climate Vision \(2021\)](#). Sets out strategy to meet Paris Agreement commitments. Move towards resilience and net zero by 2050. It underlines the long-term strategy (LTS) for low greenhouse gas emissions and climate-resilient development. 4 strategic axes of policy action are identified: 1. Climate-resilient food and landscapes 2. Low emissions and resilient economy 3. Climate-resilient people 4. Climate-aware Integrated Coastal Zone Management.

[2016 climate change national policy](#). By 2025, to achieve the mainstreaming of climate change into national planning, budgeting, decision-making, and programme implementation.

SUB-NATIONAL LEVEL / ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

According to the 1996 Constitution an Act of the National Assembly shall make provision for the functions, powers and duties of local government authority including provision for the infrastructure and development of the area within the authority's jurisdiction and the preservation of the environment amongst others.

NET ZERO TARGET

Gambia's 2nd NDC aims for net zero by 2050, reiterating what was in their 2050 Climate Vision policy. Gambia's 2nd NDC did not increase ambition, according to the [Climate Action Tracker](#) analysis. It aims for 45.4% GHG reduction below 2010 levels by 2030 compared to the expected BAU level.

CLIMATE ACTION TRACKER RATING

Changed to "Almost Sufficient" with the 2nd NDC from "1.5°C Compatible" with Gambia's 1st NDC.

ISSUES & CHALLENGES

- Ranked 172 on [Human Development Index](#).
- Climate change will impact coastline and River Gambia watershed. Gambia is dependent on its coastline and riverine economy.

GHANA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	6	0	26	31.07m	0.11%	N/A

Summary

Ghana's national climate framework consists of 4 laws, 6 policies and 26 climate targets. The objective of the 2016 [Renewable Energy Act](#) was to provide for the development, management and utilisation of renewable energy sources in an efficient and environmentally sustainable manner. The 2019 [Ghana Renewable Energy Master Plan](#) aims to increase the proportion of renewable energy in the national energy mix whilst reducing the dependence on biomass. The [National Climate Change Policy](#), passed in 2013, aims "to ensure a climate- resilient and climate-compatible economy while achieving sustainable development and equitable low-carbon economic growth for Ghana". Whilst acknowledging that economic modernization will increase emissions, it argues that the new development path will reduce emissions against the NAU baseline through energy waste reduction, better infrastructure and improved public transport. In its assessment of national level readiness, the [CAT](#) states that whilst Ghana's president and government are showing support for efforts to fight climate change, they are sending mixed messages due to their ongoing support for fossil fuel extraction.

- Ranked 138 on the Human Development Index.

CONSTITUTIONAL SYSTEM

- Constitutional democracy.
- Legal system is based on English common and customary law.
- President is both head of state and government.
- The Cabinet consists of president, vice-president and 10-19 ministers who are nominated by the president and approved by parliament.
- Unicameral 275 seat parliament elected for 4 year terms serves as legislature & carries out all primary legislative functions. Bills require assent of president.

CONSTITUTION

Approved in 1992 and is supreme law. Allows for decentralisation and local government. provides for a president who is the head of state and is elected for a four-year term, renewable only once, a cabinet consisting of the president, vice-president and ministers of state, a council of state to counsel the president and a parliament.

CLIMATE POLICIES AT NATIONAL LEVEL

Law:

[Renewable Energy Act 2016](#). objective is to provide for the development, management and utilisation of renewable energy sources for the production of heat and power in an efficient and environmentally sustainable manner.

Policies:

[Ghana Renewable Energy Master Plan \(2019\)](#). Increase local participation in renewable energy industry, reduce reliance on biomass.

[The National Climate Change Policy \(NCCP\)](#) (2013) outlines the vision and objectives with respect to effective adaptation, social development and mitigation. Its aim is 'to ensure a climate-resilient and climate-compatible economy while achieving sustainable development and equitable low-carbon economic growth for Ghana'. It acknowledges that economic modernisation will increase emissions but argues that the new development path will reduce emissions against the BAU baseline through energy waste reduction, better infrastructure and improved public transport.

[2012 National Climate Change Adaptation Strategy](#) released by a joint venture between UNEP/UNDP & Danish Ministry of Foreign Affairs. Outlines strategies to increase climate resilience, decrease vulnerability of population, deepen awareness, draw from funding opportunities, and facilitate mainstreaming of disaster risk reduction to national development frameworks.

NET ZERO TARGET

No target.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

- Ghana's president and government support efforts to fight climate change, but at the same time also support fossil fuel extraction.
- Desertification in northern savannah.
- According to the [Climate Action Tracker's August 2021 Climate Governance report](#), Ghana does not have comprehensive climate change legislation, but rather piecemeal laws, regulations and policies across various sectors. These do not provide for climate measures in all sectors. Furthermore, Ghana's NDC targets are not enshrined in law.

GUINEA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	7	0	23	13.13m	0.1%	N/A

Summary

Guinea's national climate framework consists of 2 laws, 7 policies and 23 targets. The [National Strategy on Climate Change of Guinea \(2019\)](#) is structured around nine strategic axes, which includes promotion of measures to increase climate resilience, furthering sectoral measures to limit GHG emissions, integration of climate change into policies and strategies, education and communication and promotion of access to climate finance. The [National Sustainable Development Strategy \(NSDS\) of Guinea \(2019\)](#) also contains climate related goals, such as reducing GHG emissions and promoting energy efficiency. Guinea is at a high risk from flooding, and agriculture and water availability are impacted by rain variability and increased drought conditions.

- Ranked 178 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Guinea is a presidential republic. The president is head of state and the government. The unicameral National Assembly was dissolved in September 2021 after a military coup and the constitution was suspended. A Transitional Council of 81 members was appointed by the Transitional President in January 2022, including 24 women.

CONSTITUTION

In September 2021, following a military coup which saw the National Assembly dissolved, the 2010 constitution was suspended. This constitution limited the term of the president to five years, renewable once, and provided for equality regardless of gender, religion, political party and race.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Environmental Code \(2019\)](#). Establishes fundamental principles for sustainable development and sets out to manage and protect the environment from land degradation. Climate change mitigation and adaptation measures include creating a database of harmful emissions and ensuring sectoral ministries and local authorities incorporate relevant aspects of the [National Strategy for Adaptation for Climate Change](#).

[Forest Code \(2017\)](#). Sets out to protect and sustainably develop forests with climate change mitigation given as an outcome.

Policies:

[National Strategy on Climate Change of Guinea \(2019\)](#). The policy includes both adaptation and mitigation measures. The policy is structured around nine strategic axes, which includes promotion of measures to increase climate resilience, furthering sectoral measures to limit GHG emissions, integration of climate change into policies and strategies, education and communication and promotion of access to climate finance.

[National Sustainable Development Strategy \(NSDS\) of Guinea \(2019\)](#). Contains climate related goals such as to reduce GHG emissions and promote energy efficiency. By 2040, 70% of households should use “improved cookstoves” and the share of renewables in the energy mix should increase from 22% to over 44%.

[Vision 2040 for an emerging and prosperous Guinea \(2016\)](#). Climate change is mentioned once as a threat made worse by poor management practices.

[National Economic and Social Development Plan \(PNDES\) 2016-2020](#). Contributions to fight climate change include inspecting vehicles amongst other methods in the transport sector, which will be the responsibility of those who choose and manage contractors, as well as the road maintenance fund. The governance will be strengthened by implementing a risk analysis associated with procurement. Mentions GHG reduction and climate change adaptation.

[National Environment Policy of Guinea \(2011\)](#). The policy sets adaptation to climate change as a prominent goal, as well as promoting measures towards soil restoration and carbon sequestration.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

Policies:

[National Strategy on Climate Change of Guinea \(2019\)](#). Contains a section titled “Policy Instruments in the Fight Against Climate Change in Guinea”. The [National Risk and Disaster Management Policy \(2017\)](#) is discussed within this section, and contains measures to increase the resilience of local communities in the face of risks, which includes climate risks. The National Strategy on Climate Change of Guinea (2019) discusses how climate change can be taken into account within policies, including strengthening advocacy with policy makers, local ministries and local authorities.

NET ZERO TARGET

2050 - proposed/in discussion. It is unclear when or where this was proposed.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

In 2018, [Climate Links](#) described the issues and challenges facing Guinea as a result of climate change and other stressors: "Already prone to flooding events during the rainy season, changing rainfall patterns are likely to exacerbate this issue, stress agricultural livelihoods, and threaten water quantity and quality. Warming oceans and sea level rise, combined with non-climate stressors such as pollution and overfishing threaten Guinea's coastal communities and fishing industry. Rising temperatures are expected to expand the range and transmission period for disease vectors to higher elevations. Pressure on Guinea's agriculture and water supply due to rainfall variability and increased drought conditions may increase dependence on forest resources, threaten climate vulnerable species, and prolong fire seasons in the montane and lowland forests."

KENYA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
5	14	1	7	53.77m	0.1%	Almost Sufficient

SUMMARY

Kenya's national climate framework consists of 5 laws, 14 policies and 7 targets. There has been 1 climate litigation case, focussing on whether the National Environmental Management Authority and Amu Power Company fulfilled their obligations under the [Climate Change Act, 2016](#). It was found by a tribunal that they had not fulfilled their obligations. The Act aims to "mainstream climate change responses into development planning, decision making and implementation" as well as aiming to "formulate programmes and plans to enhance the resilience and adaptive capacity of human and ecological systems to the impacts of climate change". The [CAT](#) gives Kenya an overall rating of "Almost Sufficient" for its climate targets and policies, with their policies and unconditional NDC target meeting their fair-share contribution to limiting warming to 1.5°C. However, their unconditional target is currently only compatible with 4°C of warming or higher and needs to be strengthened.

- Ranked 143 on the Human Development Index.

CONSTITUTIONAL SYSTEM

From [Climate Change Laws of the World](#):

- In 2010, Kenya's unicameral Parliament was replaced with a bicameral Parliament comprising a National Assembly and a Senate.
- The National Assembly consists of a Speaker, 290 MPs elected by constituencies, 47 women MPs elected by registered voters from each county and 12 members nominated by political parties according to the proportion of members they have in the National Assembly to represent special interests including youth, persons with disabilities and workers.

- The Senate consists of 47 members, each elected by the registered voters of each county, 16 women members nominated by political parties according to their proportion of members of the Senate, two members (a man and a woman), representing young people and two members, (a man and a woman), representing persons with disabilities. Proposed laws are either public or private bills. Public Bills concern matters of public policy or changing existing legislation. The government initiates them with its executive power while private members of either house can promote a private bill.

CONSTITUTION

- The Constitution is supreme law.
- Most recent draft enabled in 2010.
- Changed structure of state from federal to unitary.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

- [Climate Change Act 2016](#). Framework for promoting climate resilient low carbon economic development. Includes: mainstream climate change responses into development planning, decision making and implementation, mainstream and reinforce climate change disaster risk reduction in strategies and actions of public and private entities, provide incentives and obligations for private sector contributions to achieving low carbon climate resilient development. Act also established National Climate Change Council. The Act also mandates the Cabinet Secretary to formulate a National Climate Change Action Plan, to be then updated every five years, with implementation review conducted every two years. The Act allows Citizens to apply to the Environment and Land Court "alleging that a person has acted in a manner that has or is likely to adversely affect efforts towards mitigation and adaptation to the effects of climate change" [Related litigation case](#).

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Climate Change Act 2016](#): "integrate climate change into the exercise of power and functions of all levels of governance, and to enhance cooperative climate change governance between national government and county governments."

The 2010 Constitution provides that national legislation providing for the governance and management of urban areas and cities is to be implemented by local governments. County assemblies may make any laws that are necessary for, or incidental to, the effective performance of the functions and exercise of the powers of the county government; for the management and exploitation of the county resources and for the development and management of its infrastructure and institutions.

NET ZERO TARGET

No target. Kenya's [updated NDC](#) reiterates their goal of reducing GHG emissions by 30% (in relation to 2010 BAU levels) by 2030 conditional to external support in sectors of energy, transportation, industrial processes, agriculture, forestry and land-use and waste.

CLIMATE ACTION TRACKER RATING

The [CAT rates](#) Kenya's climate targets and policies as overall "Almost sufficient": "Kenya's policies and unconditional target meet its fair-share contribution to limiting warming to 1.5°C. However, Kenya's target with international support is currently only compatible with 4°C of warming or higher and should be strengthened. The strong difference in the two ratings reflects Kenya's situation as a country with strong development needs and a small historical responsibility, but with relevant mitigation potential on their own territory, which should be exploited to a large extent with the help of international support. Kenya should strengthen its conditional target and specify support needs."

ISSUES & CHALLENGES

From the [Africa NDC Hub](#):

- Over 84% of the country's land area is arid and semi-arid and the economy is dependent on climate-sensitive sectors such as rain-fed agriculture, water, energy, tourism, wildlife and health.
- Kenya has been experiencing the impacts of climate change resulting in socio-economic losses estimated at 3-5% of the GDP annually, and impeding development efforts. The situation is exacerbated by the country's dependence on climate sensitive natural resources.

LEBANON

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	4	0	5	6.825 m	0.07%	N/A

SUMMARY

Lebanon's national climate framework consists of 0 laws, 4 policies and 5 climate targets. Lebanon does not have any specific climate change policies, but does include mitigating the impact of climate change and other natural hazards as a goal in its [2015-2025 National Forest Programme](#) (2015) by enhancing ecosystem resilience in forestland. The seventh course of action in the [Ministry of Agriculture Strategy 2015-2019](#) (2014) focusses on ensuring sustainable management and use of natural resources (including water and agricultural resources) notably in response to climate change impacts, as well as others such as land degradation. The agricultural sector in Lebanon will be negatively affected by climate change, as temperatures rise and water resources become scarcer, impacting the lives of many communities.

- Ranked 92 on the Human Development Index.

CONSTITUTIONAL SYSTEM

- Parliamentary democratic republic within the overall framework of confessionalism, a form of consociationalism in which the highest offices are proportionately reserved for representatives from certain religious communities.
- Parliament is unicameral with 128 directly elected members. The seats are equally divided between Christian and Muslim members proportionately between the 18 different denominations and proportionately between its 26 regions
- Parliament elects a president to a single term and the election is held within 15 days of the validation of the MP who is a candidate.
- Conventionally, the President is a Maronite Christian, the Prime Minister a Sunni Muslim & the Speaker of the Parliament a Shi'a Muslim.

CONSTITUTION

- The Constitution was adopted in 1926 and last updated in 2004 and it grants people the right to change their government.
- The entire Lebanese cabinet resigned in 2020 and a new government was formed in 2021.
- Article 24 of the constitution mandates the distribution of offices on the basis of Confessionalism as an interim measure.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National Renewable Energy Action Plan 2016-2020](#). Focuses on the objectives of a 12 per cent share of renewable resources in the energy mix by 2020. Broad document setting Lebanon's quantitative objectives of renewable energy penetration in the energy supply market. It details sectoral plans for wind, large-scale and household solar, hydro, geothermal and biomass.

[National Energy Efficiency Action Plan](#) (2016) is a mid-term vision determining horizontal and sectoral policies and targets to improve energy efficiency in the country.

The [2015-2025 National Forest Programme](#)'s goals include 1) establishing restoration and rehabilitation plans in degraded lands to counteract soil erosion and desertification, 2) enhancing ecosystem resilience in forestland to mitigate the impact of climate change and other natural hazards, and 3) carbon sequestration.

[Ministry of Agriculture Strategy 2015 - 2019](#). Seventh course of action of the Strategy focuses on ensuring sustainable management and use of natural resources (land, forest, water, genetic resources, fisheries and aquaculture resources), notably in response to climate change impacts, land degradation, overgrazing, unsuitable cropping patterns, overuse of forest resources, over exploitation of fisheries vulnerable stocks.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Lebanon is a unitary state with a multi-tier governance system composed of the central government, regional governments, subregional, unions of local governments, and local governments.

Municipalities constitute the main decentralised tier of governance.

Municipalities are governed by a municipal council elected by their registered population. The council holds policymaking power which benefits from the administrative and financial autonomy granted by the Municipal Act.

NET ZERO TARGET

A net zero target of 2050 has been proposed and/or is in discussion. Lebanon's [updated NDC](#) built upon its ambition in its 2015 NDC by unconditionally increasing its GHG emission target relative to the BAU scenario from 15% to 20%, and conditionally increasing its target relative to the BAU scenario from 30% to 31%.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

- From [Climate change in Lebanon: a Threat Multiplier](#); climate change will increase temperatures and make water resources scarcer. This will negatively affect agricultural output and the livelihoods of many communities. Higher temperatures will also result in increased energy demand, putting a strain on businesses and services as they struggle to meet their power needs.
- There have been wildfires in the North of the country that have burnt large swathes of pine forest.

LIBERIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	6	0	12	5.058m	0.02%	N/A

SUMMARY

Liberia's national climate framework consists of 2 laws, 6 policies and 12 climate targets. Liberia has a [Climate Change Gender Action Plan \(2012\) \(CCGAP\)](#) which aims to ensure gender equality is mainstreamed into Liberia's climate change policies and programs so that there are equal opportunities for men and women to implement and benefit from mitigation and adaptation initiatives. Liberia's [National Policy and Response Strategy on Climate Change \(2018\)](#) articulates the government's visions and aspirations for establishing a framework to address climate change through concrete actions. The policy states climate change in Liberia has increased occurrences of flooding as well as low agricultural yields. Climate change undermines development gains and poses a risk to food security and adaptive capacity.

- Ranked 175 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Liberia is a presidential republic. The president is head of state, head of the government and commander-in-chief of the armed forces. The bicameral legislature consists of the Senate and the House of Representatives. The House of Representatives has 73 directly elected members who serve a term of 6 years. The Senate consists of 30 directly elected members who serve a term of 9 years. In October 2016, the House of Representatives passed the Equal Representation and Participation Bill, creating five seats for women, one for youth and one for people with disabilities. However, the Ministry of Justice had not incorporated these changes into election law before the last House of Representative elections in 2017.

CONSTITUTION

The Liberian constitution came into force in 1986 and is the supreme law. In 2020, the Senate elections were held jointly with a referendum on amendments to the constitution. None of the eight proposed amendments received the requisite level of support (two thirds of votes). The proposed amendments included reducing Senate terms from 9 to 7 years and reducing House of Representative terms from 6 to 5 years.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Environmental Protection and Management Law of the Republic of Liberia \(2002\)](#). The Law states that the Environmental Protection Agency shall "measure the value of unexploited natural resources in terms of watershed protection an [sic] influences on climate and other potential genetic value." In section 89 on protecting the ozone layer, the Law states the Environmental Protection Agency shall issue guidelines and implement programmes to conserve Liberia's rainforests as sinks for GHGs. The aim of the Law is to "establish a legal framework for the sustainable development, management and protection of the environment by the Environment Protection Agency".

[Act creating the Environment Protection Agency of the Republic of Liberia \(2002\)](#). Also established the Environmental Protection Fund.

Policies:

[Pro-Poor Agenda for Prosperity and Development 2018 to 2023 \(PAPD\)](#). This is the second in a series of five-year National Development Plans (NDPs) anticipated under the Liberia Vision 2030 framework. The Agenda seeks to craft a national identity aligned with the Africa Agenda 2063 (AU 2063) and the Economic Community of West African States (ECOWAS) Vision 2020. A national environmental action plan (NEAP) will incorporate climate change into national development programmes, and future-proof all future national policies and sectoral plans. Further measures include increasing climate change awareness and implementing the [Climate Change Gender Action Plan \(2012\) \(CCGAP\)](#) recommendation. The CCGAP aims to ensure gender equality is mainstreamed into Liberia's climate change policies and programs so that there are equal opportunities for men and women to implement and benefit from mitigation and adaptation initiatives.

[National Policy and Response Strategy on Climate Change \(2018\)](#). The policy articulates the government's visions and aspirations for establishing a framework to address climate change through concrete actions. It also sets a mandate and strategy for government engagement with local and international stakeholders and partners. The policy was developed using methodological tools, such as reviewing other countries' climate policies and taking best practices. Key adaptation policies include adapting to short-term climate variability and extreme events to eventually enable adaptation to long-term climate change issues and policies and measures assessed in relation to development. The policy recognises the following sectors as a priority for adaptation: "forestry and wildlife, agriculture, coastal areas, water resources,

fishery, energy, mining, industry, transport, tourism, Infrastructure, urbanization and settlement, and health". Mitigation strategies include enhancing Liberia's carbon sequestration potentials by promoting sustainable forest management, conservation and reducing key drivers of deforestation. These measures will also contribute to sustainable wildlife management. The policy has included policy statements on mitigation for the following sectors: forestry and wildlife, agriculture, energy, mining, industry, transport, tourism and waste management.

[National Disaster Management Policy \(2012\)](#). Objectives of the policy include creating a foundation for the development of legal and institutional frameworks and good governance

for disaster management, by getting the National Legislature to pass a law creating the National Disaster Management Agency (NDMA) as an autonomous body. The policy incorporates integrated climate risk management within sustainable development, and recognises that developing capacity to deal with existing disaster risks will help generate capacity to deal with future risks due to climate change. Efforts will also be made to integrate disaster risk reduction into climate change adaptation strategies. A key policy priority activity is "Developing and recommending enactment of an environmental, industrial and agricultural and gender sensitive NDM Act with a clear link to climate change adaptation and /or climate risk management."

[Executive Order on the Continuation of the Liberia Rural and Renewable Energy Agency and the Rural Energy Fund \(2012\)](#). Orders the continuation of the Rural and Renewable Energy Agency and Rural Energy Fund to "support economically viable, socially acceptable, and environmentally friendly energy projects and programs in Liberia, especially those involving renewable energy, to support the economic and social development of the Nation's rural population." References the UNFCCC in considering renewable to reduce emissions.

[National Energy Policy \(2009\)](#). Includes a policy declaration to drive Liberia towards a carbon neutral economy by 2050 as well as encouraging the use of renewable energies and improving energy efficiency.

[Food and Agriculture Policy and Strategy \(2008\)](#). Aims to provide information to farmers on climate change and to implement adaptation programmes, particularly amongst Liberia's subsistence farmers.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

Laws:

[Act creating the Environment Protection Agency of the Republic of Liberia \(2002\)](#). The Policy Council on the environment shall "promote co-operation among Line Ministries, local authorities, the private sector, non-governmental organizations engaged in environmental protection programs and the public."

Policies:

[National Policy and Response Strategy on Climate Change \(2018\)](#). A key adaptation policy includes developing adaptation measures at the local level. The policy also seeks to ensure environmentally sustainable development at the national and local level. The policy seeks to promote ecotourism, conservation and Payment for Ecosystem Services (PES) that involve local communities, targeted at biodiversity conservation, minimising illegal poaching and community benefits (pro-poor and gender sensitive). The policy looks to identify local and traditional knowledge that can be incorporated into climate change adaptation and mitigation efforts.

[National Disaster Management Policy \(2012\)](#) Priority actions to increase information and knowledge management include "Promoting the integration of DRR knowledge in the school curricula at all levels and the training and learning programmes for development planners, emergency managers and local government officials."

NET ZERO TARGET

2050 - in policy document.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Pro-Poor Agenda for Prosperity and Development 2018 to 2023 \(PAPD\)](#). According to the Agenda: "The low level of awareness among the general population of environmental protection and climate change issues, coupled with the competition between human economic activities and the environment, also undermines efforts to improve environmental management."

[National Policy and Response Strategy on Climate Change \(2018\)](#). Climate change has increased occurrences of flooding as well as low agricultural yields in Liberia. Climate change undermines development gains in Liberia and poses a risk to food security and adaptive capacity. The policy states: "Liberia faces challenge with the impact of climate change coupled with many socio-economic problems like poverty,

poor infrastructure, lack of information technology and access to finance, and weak institutions and resource competition, among others challenges." The policy also goes on to explain the risks to Liberia's dense forest from various sources, such as shifting cultivation which uses slash and burn and the indiscriminate clearing of forest for industrial and artisanal mining.

[Food and Agriculture Policy and Strategy \(2008\)](#) Livelihoods in coastal areas are and will continue to be affected by rising sea levels.

[A Climate Parliament roundtable](#) saw Liberian MPs discussing climate impacts already identifiable, noticeably the variability of the rainy and dry seasons, which historically have been distinct. Along with rising temperatures, this has impacted areas such as farming and hydropower.

MADAGASCAR

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	6	0	9	27.69m	0.12%	N/A

SUMMARY

Madagascar's national climate framework consists of 4 laws, 6 policies and 9 targets. The [National Climate Change Policy](#), passed in 2011, aims to promote a national response to reduce the vulnerability of the country against climate change. The focusses of the policy include mitigation, adaptation and promoting research, development and technology transfer, and implementation will be co-ordinated by the Ministry of Environment. The Ministries of Agriculture, Livestock and Fisheries developed the [National Strategy to Face Climate Change in Agriculture-Livestock- Fishery](#) in 2013 for the period 2012-2025. The policy is aligned with the National Climate Change Policy and includes measures such as generating socioeconomic benefits via mitigation for the sector as well as adaptation. The policy also aims to promote applied research and technological innovations to agriculture-livestock-fisheries. Adaptation measures are particularly important in Madagascar due to the increasingly frequent extreme weather events which severely impact the population's livelihoods along with the economy. Madagascar is rated 12th on the [Global Climate Risk Index](#) for 2000-2019.

- Ranked 164 on Human Development Index.

CONSTITUTIONAL SYSTEM

- Madagascar is a State based on a system of Decentralized Territorial Collectivities composed of Communes, of Regions, and of Provinces
- Madagascar is a semi-presidential representative democratic multi-party republic, wherein the popularly elected president is the head of state and selects a prime minister, who recommends candidates to the president to form his cabinet of ministers.
- The public directly elects the president and the 127 members of the National Assembly to five-year terms.
- For the National Assembly 87 members are elected by plurality vote in single-member constituencies for 5-years; 64 members are elected by single non-transferable vote in two-member constituencies for 5-years.
- In the Senate, all 33 members of the Senate serve five-year terms, with 22 senators elected by local officials and 11 appointed by the president.

CONSTITUTION

- According to the constitution, executive power is exercised by the government while legislative power is vested in the ministerial cabinet, the Senate and the National Assembly.
- The constitution establishes independent executive, legislative and judicial branches and mandates a popularly elected president limited to three five-year terms.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

2017 [Reform of the National Electricity Fund](#). Sets up a National Sustainable Energy Fund intended to contribute to the financing of electricity infrastructure development projects in rural and peri-urban areas, based on renewable energies and the promotion of energy efficiency.

There is a [National Policy of Risk Management & Catastrophes](#).

[Flood protection law](#) (2013) establishes bodies responsible for flood protection & setting the fees.

[National Strategy for Disaster Risk Management](#) (2003). According to the law, risk management and disaster fits into the overall framework of activities relating to civil protection and security. The guiding principles are: guarantee the protection of the population and of the environment; improve the resilience of the population in cases of risks and catastrophes; and develop conditions to reduce the vulnerability of the population - although there is no explicit mention of climate change adaptation.

Policies:

[2015 law established a Steering Committee](#) of the Carbon Credit Sales Fund for Communities whose mission is to guide the use of this fund.

[2014 law](#) created the National Coordination Office for the Reduction of Emissions related to Deforestation and Forest Degradation (BNC-REDD +) within the Ministry of Environment and Forests.

[The Ministries of Agriculture, Livestock and Fisheries](#), developed a National Strategy to Face Climate Change in Agriculture-Livestock-Fishery for 2012-2025.

[National Climate Change Policy \(2011\)](#). The Policy aims to promote a national response to reduce the vulnerability of the country against climate change. It has five axes: promoting adaptation; promoting mitigation; integrating climate change at all levels; developing funding instruments; and promoting research, development and technology transfer and adaptive management.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

- The decentralized territorial collectives are provided with regulatory power (according

to Article 140 of the constitution), financial autonomy (Article 142). In terms of Article 141 the Decentralized Territorial Collectives assure the participation of the State, notably, the administration, the territorial development, the economic development, the preservation of the environment and the amelioration of the framework of life, amongst others.

From the 2018 [USAID report on Madagascar](#):

- Regions and communes prepare social and economic development plans (PCDs) that are accompanied by a land zoning and development blueprint. Urban communes develop urban plans. Few development plans reflect climate change considerations and priorities for adaptation explicitly, and even fewer cite or are informed by climate change vulnerability assessments.
- Some PCDs include priorities that do address potential climate impacts, whether perceived or real. For example, the Tsihombe communal development plan (2016) does not explicitly mention climate change, but cites crop genetic diversity, degraded pastureland, deforestation, soil erosion and degradation, pests and diseases, and water stress as recurring challenges to development. However, the plan does not provide feasible, actionable solutions or a detailed budget for proposed actions, rendering it too vague to be a useful framework for communal development and resilience.

NET ZERO TARGET

Achieved (self-declared). Madagascar's 1st NDC set a goal to reduce GHG emissions by 14% (relative to BAU levels (2000)) by 2030 conditional to external support in sectors of energy, agriculture, LULUCF and waste.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

- 12th on [Global Climate Risk Index for 2000 to 2019](#).
- [Due to its geographical position](#), the island frequently experiences extreme weather events that significantly affect its national economy, as well as the population's livelihood.
- Ranked 164 on Human Development Index

MALAWI

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	11	0	13	19.13m	0.04%	N/A

SUMMARY

Malawi's national climate framework consists of 4 laws, 11 policies and 13 climate targets. Malawi is heavily dependent on rain-fed agriculture which makes it highly vulnerable to the increasingly severe floods and droughts due to climate change. The [Africa NDC Hub](#) describes Malawi as one of the most vulnerable countries in sub-Saharan Africa to climate change, therefore urgent action is needed to undertake measures to ensure the resilience of sectors such as agriculture. The 2020 [Malawi Vision 2063](#) policy includes developing the resilience of the agricultural sector, notable through innovative technologies. The 2018 [National Resilience Strategy 2018-2030](#) aims for scaled-up climate-resilient infrastructure, along with better climate communication and education for stakeholders to increase their capacity for adaptation as well as early warning systems and response mechanisms to safeguard lives and livelihoods from disasters. The [National Climate Change Management Policy](#), passed in 2016, focusses on the country's mitigation and adaption strategies. Its long-term goal is to reduce the long-term socio-economic impacts of climate change as well as improving community resilience through more sustainable livelihoods and reduced GHG emissions.

- Ranked 174 on Human Development Index.

CONSTITUTIONAL SYSTEM

- Malawi is a unitary presidential republic.
- The executive includes a President who is both Head of State and Head of Government, first and second Vice Presidents and the Cabinet of Malawi.
- The President and Vice President are elected together every five years. A second Vice President may be appointed by the President if so chosen, although they must be from a different party.
- The members of the Cabinet are appointed by the President and can be from either inside or outside of the legislature.

The legislative branch consists of a unicameral National Assembly of 193 members who are elected every five years, and although the constitution provides for a Senate of 80 seats, one does not exist in practice.

CONSTITUTION

The current constitution was put into place on 18 May 1995 and it was last amended in 2017. The constitution is supreme law.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Environment Management Act 2017](#). Concerns the conservation and management of the environment in Malawi and prescribes environmental standards. It also concerns the conservation and management of biological (genetic) resources.

[Energy Regulation Act 2004](#). Members of the Authority should have adequate knowledge related to renewable energy. The Authority shall notably promote energy efficiency and the exploitation of renewable resources.

[There is a 1992 Disaster Preparedness & Relief Act](#).

Policies:

[2020 Malawi Vision 2063](#). Notably seeks to develop the resilience of agriculture technology through innovative technology.

[National Resilience Strategy 2018-2030](#). Includes the following: Scaled-up climate-resilient infrastructure, and enhanced climate-adaptation capacity of all stakeholders, through better access to climate information and early warning and response mechanisms that safeguard lives and livelihoods from shocks. Expanded public, private and community partnerships to safeguard Malawi's natural resource endowments and ecosystems that contribute to social and economic prosperity.

[2016 National Climate Change Management Policy](#). Aims at setting the country's mitigation and adaptation strategy. Its long-term goal is to reduce the socio-economic impacts of adverse effects of climate change; its medium-term goal is to improve community resilience through the development of sustainable livelihoods and reduced emissions of GHGs.

There is also a [2012 Climate Change Policy](#).

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

The [National Resilience Strategy 2018-2030](#) states: "strengthened national and devolved government institutions, civil society, and private sector actors to adopt effective and accountable practices that prevent, mitigate, and respond to disasters, and promote long-term development."

The local government authorities have powers to ensure the promotion of infrastructural and economic development, the consolidation and promotion of local democratic institutions

and democratic participation, and the participation in the delivery of essential and local services, as may be prescribed by any Act of Parliament, amongst others.

NET ZERO TARGET

A net zero target of 2050 has been proposed and/or is in discussion. [Malawi's updated NDC](#) states the alternative GHG pathway which implements its unconditional mitigation contribution estimates a 6% reduction against BAU levels by 2040, whilst implementing its conditional contribution is estimated to reduce emissions by 51% against the same baseline.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

- Malawi is a land-locked and densely populated country. The [Africa NDC Hub](#) describes Malawi as one of the most vulnerable countries in sub-Saharan Africa to the deleterious impacts of climate change. As a result of the country's vulnerability to climate change, there is urgent need to undertake interventions to enhance the resilience of productive sectors to the associated negative impacts.
- Ranked 174 on [Human Development Index](#).
- The NDC explains that major climate related hazards that wreak havoc in Malawi are floods and droughts.
- Malawi is heavily dependent on rain fed agriculture. Vulnerability is related to the sources of energy production being affected by floods and droughts in terms of damage to machinery, loss of biomass productivity and availability of appropriate alternative technology. Women and girls are particularly vulnerable as they have to walk further in search of basic commodities for the family such as firewood and water. [Africa Adaptation Initiative](#).

MOROCCO

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
8	15	0	75	36.91m	0.19%	Almost Sufficient

SUMMARY

Morocco's national climate framework consists of 8 laws, 15 policies and 75 climate targets, most of which are from the country's first NDC. Whilst Morocco's updated NDC contains strengthened and additional targets, the [CAT](#) describes the updated NDC as containing measures which could jeopardise long-term decarbonisation and lead to a lock-in of emissions, such as plans to build additional natural gas infrastructure. The overall CAT rating for Morocco is "Almost Sufficient". Morocco's [Law On Water](#) (passed in 2016) and [Framework Law on the National Charter for the Environment and Sustainable Development](#) (passed in 2009) both explicitly mention climate change. In 2020, a [Decree established the National Climate Change and Biodiversity Commission](#) under the scope of the Department of the Environment. The Commission aims to enable consultation, coordination and the monitoring of commitments. It is reinforced by a number of committees. The 2019 [Climate Change Policy of Morocco](#) is one of a number of national climate-related policies. It establishes Morocco's response to the Cancun Agreements and coordinates climate change initiatives as well as being a flexible political tool for low carbon development.

- Ranked 121 on the Human Development Index.

CONSTITUTIONAL SYSTEM

- Morocco is a constitutional monarchy.
- In 1996 a bicameral legislature was established. The bicameral parliament is composed of a Chamber of Representatives with 395 members, elected for 5 years, and a Chamber of Councillors, elected indirectly by local and national electoral colleges, with a minimum of 90 and a maximum of 120 members, who are elected for six years.
- The parliament enacts national laws, oversees the government, and assesses public policies.
- The king exercises his powers through Royal Decrees, which are part of the king's discretionary powers in a variety of fields related to administration, legislation and other regulatory mechanisms. They are enforced as laws and constitute one of the most important sources of legislation in Morocco. There are two types of Royal Decree: those

that allow the king to exercise his religious prerogatives and those related to his status as head of state.

CONSTITUTION

- Responding to the Arab Spring movements and pro-reform demonstrations, King Mohammed VI proposed constitutional amendments in 2011. The electorate voted the amendments into law and a new constitutional text was enacted. The constitution also distinguishes between decrees that are countersigned by the head of government and those that are signed only by the king.

International treaties ratified by the Moroccan state supersede national laws.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Agency for Development of Renewable Energy and Energy Efficiency](#) (2010). ADEREE aims to contribute to the implementation of the national policy on renewable energy and energy efficiency.

2016 [Law on water](#) includes administration of water conservation & takes into account climate change.

[A law created the Moroccan Agency for Solar Energy in 2013](#) to implement the Moroccan solar energy programme.

2009 [framework Law on the National Charter for the Environment and Sustainable Development](#) One of the aims is to strengthen the legal protection of resources and ecosystems by listing the types of actions or measures the State proposes to take in order to fight against all forms of pollution and nuisance and provide a high level of effective protection to such resources. The framework law explicitly mentions the fight against climate change. Environmental protection involves the promotion of sustainable uses of resources, the fight against pollution and the combined effects of desertification and climate change. It does not mention the UN Convention on Desertification.

Other laws include one for [energy efficiency](#) (2009-setting minimum requirements for appliances) & [environmental protection](#) (2003-repair damage & compensate victims).

Policies:

2020 policy establishing [National Climate Change and Biodiversity Commission](#). Commission aims to enable consultation, coordination, monitoring of commitments, and is reinforced by a range of committees.

[Forest of Morocco 2020-2030](#). Strategy aims at improving the management of forests in the country to avoid further degradation and stimulate private investment in the sector.

[Generation Green 2020-2030](#). Closely linked to human development, Generation Green's second foundation concerns the sustainability of agricultural development, through specific actions in production chains, distribution channels and the preservation of natural resources in the context of climate change.

[National Plan Against Climate Change](#) (2019).

[2019 policy creating GHG inventory system.2019 Climate Change Policy](#). Climate Change Policy of Morocco materializes Morocco's response to the Cancun Agreements.

[National Strategy of Sustainable Development 2020 & 2030](#). Frames the future of governmental action, notably in order to achieve the transition to a low-carbon economy.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

- The territorial collectivities of the Kingdom are the regions, the prefectures, the provinces and the communes and the regions and the other territorial collectivities participate in the implementation of the general policy of the State and in the enactment of the territorial policies through their representatives in the Chamber of Councilors.
- Laws on the [Agency for Development of Renewable Energy and Energy Efficiency \(ADEREE\)](#) (2010) proposes national, regional and sectoral plans for the development of renewable energy and energy efficiency.
- [National Climate Change and Biodiversity Commission](#) (2020) also sets a subnational framework for climate-related efforts.
- [National Action Programme to Combat Desertification](#) (2013). Policy prepared in consultation with regional & local actors.

NET ZERO TARGET

No target. Morocco increased its GHG emission reduction targets in its [updated NDC](#) to an 18.3% unconditional reduction and a 45.5% conditional reduction compared to a 2030 baseline.

CLIMATE ACTION TRACKER RATING

- Almost Sufficient.

The [Climate Action Tracker](#) states:

- "Morocco's conditional target, to be achieved with international support, is almost, but not yet compatible with 1.5°C of warming, and should be strengthened. Morocco should receive international support to implement additional policies and go slightly beyond its current conditional target."
- Morocco strengthened its NDC pledge. "The new target includes an unconditional emissions reduction of 18.3% below BAU by 2030, up from a 17% reduction in the previous NDC. Thanks to an updated BAU scenario, the new target translates to an absolute emissions level that is 21% lower than that of the previous target."
- "The conditional target has been strengthened to 45% below BAU by 2030, up from a 42% reduction target in the first NDC."
- Morocco has put forward a detailed list of measures to reach this new NDC target, separated into conditional and unconditional measures, with many of them already being implemented. "It also mentions national strategies and plans, such as the national energy strategy, which aims to reduce energy consumption by 20% compared to a BAU scenario in 2030 and to reach a share of 52% of renewable energy in installed electric capacity by 2030."

ISSUES & CHALLENGES

- The [Climate Action Tracker](#) states: "There are measures in the updated NDC that could jeopardise long-term decarbonisation and lead to either a lock-in of emissions or stranded assets, with the new NDC including plans to build additional natural gas infrastructure. The Moroccan electricity mix also continues to rely heavily on coal, which supplied over two-thirds of electricity demand in 2019."
- Morocco has experienced an increased pressure on natural resources, affecting the resilience of forest ecosystems and the agriculture sector, particularly because of water scarcity.

NIGER

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
1	3	0	6	24.21 m	0.09%	N/A

SUMMARY

Niger's national climate framework consists of 1 climate law, 3 policies and 6 targets, which come from its first NDC. The 2012 [National Policy on Climate Change \(PNCC\)](#) provides the mitigation and adaptation framework of Niger. The policy's objectives include improving knowledge, communication and research and development on climate change, promoting green jobs and integrating climate change issues within national and regional planning tools. It also seeks to reinforce adaptation capacities and resilience throughout communities, an important aspect given the vulnerability of Niger to droughts and floods.

- Ranked 161 on Human Development Index.

CONSTITUTIONAL SYSTEM

Niger is a semi-presidential republic, whereby the President of Niger is head of state and the Prime Minister of Niger head of government. The officials holding these posts are chosen through a representative democratic process of national and local elections, in the context of a competing multi-party system. Executive power is exercised by the government. Legislative power is vested in both the government and the National Assembly

The unicameral National Assembly was expanded in 2004 to 113 deputies elected for a 5-year term under a majority system of representation. The National Assembly was then expanded again to 171 seats. Political parties must attain at least 5% of the vote in order to gain a seat in the legislature.

CONSTITUTION

The Constitution of December 2009 was revised by national referendum on 25 November 2010. It restored the semi-presidential system of government of the 1999 constitution (Fifth Republic) in which the president of the republic, elected by universal suffrage for a five-year term, and a prime minister named by the president share executive power.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Framework Law on Environmental Management](#) (1998). A Fund called the National Environment Fund is set up to finance the National Environmental Policy (art.15). This fund will notably be used in support of programs to combat desertification, including reforestation, fight against bush fires, improve farming techniques and use of energy sources other than firewood, and for the promotion of the use of renewable energies and clean technologies.

Policies:

[National Policy on Climate Change](#) 2012. Mitigation & adaptation framework. 1) improve knowledge, promote research and development, produce and communicate information on climate change, 2) reinforce adaptation capacities and resilience throughout communities, 3) develop mitigation actions, 4) integrate climate change issues within national, regional and planning tools, 5) capacity-building and 6) promote green jobs.

[Order Establishing the Technical Commission on Climate Change and Variability 1997](#). Tasks include developing the National Policy on Climate Change, monitoring and evaluating its implementation, collecting data on climate change and developing adaptation and mitigation strategies.

NET ZERO TARGET

2050 proposed/in discussion. 1st NDC: 2.5% (unconditional) to 25%(conditional) reduction by 2020 and of 3.5% (unconditional) to 34.6%(conditional) reduction by 2030 in GHG emissions compared to the BAU scenario.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Situated in a desert zone so highly vulnerable to climate risks. Experienced losses due to droughts & floods.

Ranked 189 on Human Development Index.

PALESTINE

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
5	1	0	16	4.803 m	N/A	N/A

SUMMARY

Palestine's national climate framework consists of 5 laws, 1 policy and 16 climate targets. The [Legislative decree no 14/2015 on renewable energy and energy efficiency](#) and [Legislative Decree no 10/2011 on the Law of Industry](#) both encourage renewable and clean energy sources, with the latter giving incentives to companies who protect the environment. The [Amended Law no. 2/2003 on Agriculture](#) aims at preventing the decline in the production value of land due to climate change. The [National Agricultural Sector Strategy \(2017-2022\)](#) seeks to increase resilience to climate change by developing resources and policies for the Risk Prevention and Agricultural Insurance Fund and promoting innovative and adaptive solutions. Palestine's updated NDC discusses the difficult political context it operates within.

- Ranked 115 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The Palestinian Authority (PA) is the overarching political authority, encompassing an executive arm (the cabinet) and a legislative arm (the Palestinian Legislative Council; PLC). Palestine is a unitary state.

The Palestinian Legislative Council (PLC) is the unicameral legislature of the Palestinian Authority, elected by the Palestinian residents of the Palestinian territories of the West Bank and Gaza Strip. It currently comprises 132 members, elected from 16 electoral districts of the Palestinian Authority. The PLC has a quorum requirement of two-thirds, and since 2006 Hamas and Hamas-affiliated members have held 74 of the 132 seats in the PLC. The PLC's activities were suspended in 2007 and remained so as of January 2021, while PLC committees continue working at a low rate and parliamentary panel discussions are still occurring.

CONSTITUTION

[The Palestinian Liberation Organisation under instruction from the Palestinian National Council finished preparing a constitution in 2003.](#) According to the Constitution (last revised 2005) the governing system in Palestine shall be a democratic parliamentary system, based upon political and party pluralism.

CLIMATE POLICIES AT NATIONAL LEVEL

[2015 Legislative decree on renewable energy and energy efficiency.](#) Encourages alternative and clean energy resources. The Decree's objectives are to increase 1) the development of renewable energy production, and 2) energy efficiency in all sectors, including for local manufacturing firms.

[Legislative Decree on Law of Industry \(2011\).](#) Priority is given to award additional incentives to companies that protect the environment and use renewable energy resources.

2003 [Law on Agriculture](#). Enabling the sustainable use of natural resources, the agricultural capital, and forestry and forest trees. The law also aims at preventing the decline in the production value of land uses due to climate change and humanitarian activities. Defines ministry's powers including to combat desertification.

[1999 Law on Environment](#). Protect the environment from pollution in all its forms, to integrate the foundations of environmental protection in economic and social development plans, and to promote sustainable development of vital resources.

Policy:

[National Agricultural Sector Strategy \(2017-2022\)](#).

Seeks to increase resilience to climate change, by 1) developing resources and policies for the Risk Prevention and Agricultural Insurance Fund and 2) promoting innovation and adaptive solutions.

NET ZERO TARGET

No target.

Palestine considers two BAU scenarios when projecting its emissions until 2040: the Status-quo Scenario; and the Independence Scenario.

Definition from 1st NDC: "Independence scenario – by ending the Israeli occupation, Government of the State of Palestine achieves independence and is able to exercise full control over its resources. Status Quo Scenario – reflecting a continuation of the Israeli occupation of the State of Palestine. This does not mean that this is an acceptable situation."

Status quo scenario: 1st NDC 12.8% emissions reduction by 2040 relative to business-as-usual.
2nd NDC 17.5% emissions reduction by 2040 relative to business-as-usual.

Independence scenario: 1st NDC 24.4% emissions reduction by 2040 relative to business-as-usual.
2nd NDC 26.6% emissions reduction by 2040 relative to business-as-usual.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[From the updated NDC:](#) "The Oslo II Accord, formally entitled the 'Interim Agreement on the West Bank and the Gaza Strip of 1995', created three territorial zones in the West Bank: Area A, where the Palestinian Government has responsibility for public order and internal security;

Area B, where the Palestinian Government assumes responsibility for public order for Palestinians, while Israel controls internal security; and Area C, where Israel maintains exclusive control. Most land resources are in Area C, which is under full Israeli control. Restrictions on access to land and actions that can be taken, especially in this area, pose challenges for implementation of both mitigation and adaptation actions. Hence, the Updated NDCs focus on actions that can be implemented despite the occupation." "Israeli occupation of the State of Palestine restricts availability of land and resources, freedom of movement of goods and people, import and export of raw materials and products, full control of international borders, and the development of domestic and industrial infrastructure." "The NAP identifies the following 12 sectors as "highly vulnerable" to climate change: agriculture, coastal and marine, energy, food, gender, health, industry, terrestrial ecosystems, tourism, urban and infrastructure, waste and wastewater, and water."

RWANDA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
5	7	0	16	12.95 m	0.02%	N/A

SUMMARY

Rwanda's national climate framework consists of 5 laws, 7 policies and 16 climate targets. The [Five Year Strategic Plan for the Environment and Natural Resources Sector \(2014-2018\)](#) policy identified climate change as a cross-cutting issue and its objectives included building resilience to threats posed by climate change. Innovations to achieve this included ecosystem rehabilitation based on job creation, new approaches and innovative technology for irrigation, renewable energy and agro-forestry and incentivising good performance in environmental management. The 2010 [Ministerial Order Preventing Activities that Pollute the Atmosphere](#) specifies emission standards for CO2 along with other pollutants, and prohibits open burning of any substance except in specific instances, such as open air kitchen fires for cooking. Climate change is highlighted as a cross-cutting issue in the [7 Years Government Programme: National Strategy for Transformation \(NST1\) 2017 – 2024](#). The strategy focusses on cross-sectoral cooperation as a mechanism to address climate change, focussing on agriculture, urbanisation, infrastructure and land-use management. However, this policy also identifies Rwanda's oil and gas reserves as an opportunity yet to be fully exploited.

- Ranked 160 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Rwanda is a presidential republic with a legal system based on German and Belgian civil law systems and customary law.

The president is head of the government and head of the state.

The parliament is bicameral and comprises the Senate and the Chamber of Deputies. The Senate has 26 members, some of whom are appointed and some elected for an eight-year term.

The Chamber of Deputies has 80 members, who are elected for five years. The main legislative organ is the Parliament, although the President has legislative powers as well. Laws can be initiated by the Chamber of Deputies or by the cabinet. The president of the Chamber of Deputies then passes the proposals to a permanent commission. Proposals are debated in detail in the plenary session and then voted on. The President has the authority to request a second examination by parliament of organic laws and ordinary laws after they

have been voted on. If no re-examination is requested (or after it has been re-examined), the President promulgates the law within 30 days.

CONSTITUTION

The Constitution of 2003 is the supreme law. International treaties ratified by Rwanda come second in the legislative hierarchy, followed by organic laws (which require a special majority), ordinary laws (requiring a regular majority) and Orders by the President, Prime Minister, and Ministers.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

2018 [Law on the Environment](#). Establishes 1) the conservation and the protection of the natural environment (soil, water resources, biodiversity, atmosphere, etc), 2) obligations to the state, decentralised entities and local communities with regard to the protection and promotion of environment, 3) the inspection and criminal investigation power in environmental matters.

[2010 Preventing Activities that Pollute the Atmosphere](#). Annex A specifies emission standards for CO₂, along with other pollutants (such as NO_x, SO_x, PM10, Lead and Ozone). It prohibits open burning of any substance, except for fires used for recreational purposes and ceremonial; fires purposely set for agricultural control of disease and pests; and open air, kitchen fires for cooking meals.

Policies:

[Environment and Climate Change Policy](#).

The policy was approved by the Cabinet on 7 June 2019, and is a revised version of a previous policy which was introduced in 2003. The updated policy contains a number of new provisions to better align it with Rwanda's overarching medium-term National Strategy for Transformation, long- term Vision 2050 as well as multilateral commitments including the EAC Vision 2050, African Union Agenda 2063 and the Sustainable Development Goals. The Paris Agreement on Climate Change and the Kigali Amendment to the Montreal Protocol are also considered in the new policy.

[7 Years Government Programme: National Strategy for Transformation 2017 –2024](#). The 7 year strategy, adopted in 2017, sets out the Government of Rwanda's plans for achieving its 2020 and 2050 Visions for economic development. Climate Change is highlighted as a priority cross-cutting area in the strategy.

[Five Year Strategic Plan for the Environment and Natural Resources Sector \(2014-2018\)](#). The Objective of this strategy is to ensure that environment and natural resources are utilised and managed productively in support of equitable and sustained national development and poverty reduction. Includes: To increase and sustainably manage ecosystems and forest resources to optimize their economic as well as ecological functions and to ensure that development in Rwanda is undertaken in a manner that inflicts minimal damage to the environment, and building resilience to threats posed by climate change for the sustained support to economic, social and cultural development of Rwanda. Achievement of

strategy will include ecosystem rehabilitation based on job creation and income generation for rural poverty reduction and social protection.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Public powers are decentralised at local administrative entities in accordance with provisions of law. A law determines the organisation and functioning of decentralised entities.

[7 Years Government Programme: National Strategy for Transformation 2017 -2024](#). The strategy is aimed at informing sectoral and district level strategies that will enable Rwanda to achieve its development goals.

NET ZERO TARGET

2050 proposed/in discussion. [Updated NDC](#): 16% by 2030 relative to 2015 under BAU scenario (unconditional). 38% by 2030 relative to 2015 under BAU scenario (conditional).

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[7 Years Government Programme: National Strategy for Transformation 2017–2024](#). The strategy identifies the fact that Rwanda's oil and gas reserves have yet to be fully exploited as an opportunity.

[Climate change](#) has made rainfall increasingly intense. Changes in temperature and precipitation and their distributions are the key drivers of climate and weather-related disasters that negatively affect Rwandans and the country's economy, including through droughts, floods, and landslides which results in damage to infrastructure, loss of lives and property (including crops) and contribute to soil erosion and water pollution.

SENEGAL

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	16	0	6	16.74 m	0.07%	N/A

SUMMARY

Senegal's national climate framework consists of 3 laws, 16 policies and 6 climate targets. Two of these laws seek to regulate aspects of the energy industry, with one developing the biofuels sector and the other establishing a legal framework for the sustainable development of renewable energy. A 2021 policy makes certain materials used in renewable energy production VAT exempt. Commitments under the framework of the United Nations (with specific reference to the UNFCCC) are highlighted as the basis for actions on climate change and the control of emissions in the 2001 [Environment Code](#) legislation. [Decrees No. 2014-880 and No. 2020-2214 on the powers of the Minister of Environment and Sustainable Development](#) outline the responsibilities of the Minister of the Environment and Sustainable Development, including protecting the environment from pollution. The decrees further direct the minister to manage a climate change monitoring mechanism and track climate change trends. The [National Climate Change Committee](#) (NCCC) was established by a ministerial decree which passed in 2003, with jurisdiction over all domains related to UNFCCC activities and its legal instruments, including carbon emission reduction and energy efficiency. The NCCC is central to climate change communication and assisting national and local projects.

- Ranked 168 on Human Development Index.

CONSTITUTIONAL SYSTEM

The Republic of Senegal, which achieved independence from France in 1960, has a legal system based in French civil law and is a semi-presidential liberal democratic republic. The President is the head of State, while the Prime Minister is the head of Government and both the Government and Parliament possess legislative power. Senegal currently has a unicameral Parliament, the National Assembly, composed of 150 seats, 90 members of which are elected by direct and popular vote and 60 of which are selected on the basis of proportional representation from a list of political parties. All members serve five-year terms. The legislature has periodically fluctuated between a unicameral and bicameral parliament, and has been unicameral since 2012.

CONSTITUTION

The most recent Constitution was adopted and promulgated in 2001 and has been amended numerous times, most recently in 2016. It states that the Republic of Senegal is secular, democratic and social, stating that it assures equality before the law of all its citizens without distinction of origin, race, sex and religion.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Renewable Energy Law 2010-2021](#). Establishes the legal framework for the sustainable development of renewable energy. Goals outlined in this legislation include: reducing dependence on fossil fuels, diversifying the energy mix, reducing GHG emissions and facilitating domestic energy production.

2010 [Regulating the Biofuels Industry](#). Aims to develop the biofuels sector, establishing norms and conditions for the production and exploitation of biofuels in the national territory as well as for international co-operation. More broadly, the law aims to contribute to environmental protection and increase the value of forest and agricultural resources.

[Environment Code 2001](#). Key instruments for environmental protections outlines in the Code address: biodiversity; desertification; forest management; air pollution; urban planning; and hazardous waste disposal. Commitments undertaken under the framework of the United Nations are highlighted as the basis for actions on climate change (with reference to the UNFCCC) and the control the emission of pollutants (recalling the Vienna Convention and the Montreal Protocol).

Policies:

[2021 Interministerial decree](#). 22 materials used in production of renewables are VAT exempt.

[Decrees on the powers of the Minister of Environment and Sustainable Development](#) (2014 and 2020). Outlines the responsibilities of the Minister of the Environment and Sustainable Development, including protecting the environment of Senegal against pollution of any kind and ensuring that polluting activities do not impact the living conditions of the Senegalese people. Decree directs Minister further including: Fight desertification and promote soil rejuvenation policies and manage a climate change monitoring mechanism and track climate change trends.

[Ministerial Decree establishing the organization and functioning of the National Greenhouse Gas Reduction Programme through energy efficiency in the building sector and related regulation](#) (2013). Aims in particular at increasing the number of energy efficient building construction projects using innovative building materials and practices;

- developing standards for energy efficient construction;
- increasing the number of construction professionals integrating the energy efficient building standards in their project design and construction process.

[Ministerial Decree establishing the National Climate Change Committee](#) (2003). Formalises the creation of the National Climate Change Committee (NCCC) with jurisdiction over all domains related to the activities related to the UNFCCC and its legal instruments, such as: a) technological transfer; b) energy efficiency; c) promotion of renewable energy; d)

carbon emissions reduction; e) capacity building for biodiversity preservation; f) management of marine resources; g) pollution management.

2010 [Decree that creates a Steering Committee of the Project "Integration of Adaptation to Climate Change in Sustainable Development in Senegal](#).

2009 [Ministerial Order establishing the Technical Committee for disaster risk declaration](#).

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

The Territorial Collectives have a high council which is a consultative Assembly. It gives its substantiated opinion on the policies of decentralisation and of territorial development. An organic law determines the mode of designation, the number and the title of the members, as well as the conditions of organisation and of functioning of the institution.

[Decree establishes a National Committee on Climate Change](#) (COMNACC) (2012). Made up of representatives of state, local and associative structures, it is a body for coordination, consultation, training, awareness raising, management and monitoring of the various activities identified in the implementation of the United Nations Framework Convention on Climate Change and its additional legal instruments. COMNACC plays a facilitator role for information, raising awareness and training in the design, financing, implementation, validation and monitoring of national, sub-regional and regional programs and projects related to the priority areas related to climate change.

NET ZERO TARGET

2050 proposed/in discussion. 1st NDC: 29/12/2020. [Senegal commits](#) to reduce GHG emissions by 5% and 7% (unconditional) and 23.7% and 29.5% (conditional) compared to BAU levels in 2025 and 2030 respectively.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Decrease in overall rainfall and increase in intense mega storm events. Extreme drought is impacting agriculture, and causing food and job insecurity. More than 70% of the population is employed in the agricultural sector. Sea level rise and resulting coastal erosion is expected to cause damage to coastal infrastructure and displace a large percentage of the population living in coastal areas. Climate change also has the potential to increase land degradation that will likely increase desertification in eastern Senegal, leading to an expansion of the Sahara.

Ranked 168 on Human Development Index.

SOUTH SUDAN

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	3	0	3	11.19 m	N/A	N/A

SUMMARY

South Sudan's national climate framework consists of 0 laws, 3 policies and 3 climate targets, which come from their INDC. The [National Energy Policy 2015-2025](#) includes a section on climate change and environmental responsibilities. The goal of the [National Environment Policy 2015-2025](#) is to ensure the protection, conservation and sustainability of South Sudan's natural resources, and contains a chapter on climate change. South Sudan's 2nd NDC (21/09/2021) aims for a transition to a low-carbon economy by 2030. Droughts and floods result in economic losses for South Sudan and are the most common climate hazards.

- Ranked 185 on Human Development Index

CONSTITUTIONAL SYSTEM

The Constitution (last revised 2013) establishes a presidential system of government headed by a president who is head of state, head of government, and commander-in-chief of the armed forces. It also establishes the National Legislature comprising two houses: a directly elected assembly, the National Legislative Assembly, and a second chamber of representatives of the states, the Council of States. Legislative power is vested in the government and the bicameral National Legislature.

CONSTITUTION

The Constitution (last revised 2013) was signed by the President of South Sudan on Independence Day in 2011 and thereby came into force. It is now the supreme law of the land, superseding the Interim Constitution of 2005.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[2021 First National Adaptation Plan for Climate Change.](#) NAP will guide national level efforts down to communities and households. 3 pillars: 1. Building climate resilient communities; 2. Building a climate resilient economy and development trajectory; and 3. Building a climate-resilient environment and ecosystems.

[National Energy Policy 2015-2025.](#) It contains ten chapters including sections on climate change, management of resources, corporate social and environmental responsibilities and environmental planning.

[National environment policy 2015-2025.](#) The strategic goal of the National Environment Policy 2015 to 2025 is to ensure the protection, conservation and sustainable use of the natural resources of South Sudan without compromising the tenets of inter-generational equity. The policy will pursue and archive to develop laws, regulations and guidelines to ensure sustainable management of the environment as well as the prudent utilisation of natural resources. The policy contains ten chapters including chapters on climate change, management of resources, corporate social and environmental responsibilities and environmental planning.

[Fisheries Policy for South Sudan 2012 - 2016.](#) This document aims to promote, regulate and facilitate animal production and fisheries, create value and access to credit and Regional and International markets for food security, poverty alleviation and socio-economic development.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Governance system is composed of the central or national government, state level of government and the local level of government with certain administrative functions devolved to the local and state levels of government by law.

NET ZERO TARGET

2030 proposed/in discussion. [2nd NDC:](#) South Sudan has developed multiple sectoral policies and plans. SUDAN

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	1	0	14	43.85 m	0.32 %	N/A

SUMMARY

Sudan's national climate framework consists of 0 laws, 1 policy and 14 climate targets. The [Sudan National Forestry Policy Statement](#), passed in 2019, seeks to face and deal with deforestation, desertification and environmental degradation problems, but makes no mention of climate change. Sudan's 1st NDC sets an integration target of renewable energy into the power system of 20% by 2030. Sudan's NDC also outlines its high level of vulnerability to climate change. According to the [Africa Adaptation Initiative](#), more than 70% of Sudan's population's livelihoods depends on the rain-fed mechanised and traditional farms sector, which is highly vulnerable to increasingly frequent droughts and floods, which threaten millions of hectares.

- Ranked 170 on Human Development Index.

CONSTITUTIONAL SYSTEM

Following a military coup in 2019, the government was led by a Transitional Military Council, which later dissolved in August 2019, giving authority over to the Sovereignty Council of Sudan. This council and the government were dissolved by the military in October 2021.

Prior to the military coup, the Sudanese Constitution (last revised 2013) provided that the Republic of Sudan is an independent, sovereign, democratic, parliamentary, pluralistic, decentralized state.

CONSTITUTION

The temporary de facto Constitution of Sudan is the Draft Constitutional Charter for the Transitional Period of 2019 which was signed by representatives of the Transitional Military Council and the Forces of Freedom and Change alliance on 4 August 2019. The Draft Constitutional Declaration defines the leadership, institutions and procedures for the 39-month transition period.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[Sudan National Forestry Policy Statement](#). Policy notably seeks to create a "greener Sudan", by countering deforestation and degradation of forest cover caused by illegal cutting, misuse and mismanagement of cutting permits, agricultural expansion, and demand for fuel energy. This goal is meant to reverse the trend of forest cover loss by facing and dealing with the deforestation, desertification and environmental degradation problems.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

The 2019 Draft Constitutional Charter makes provision for different levels of government under clause 9. It provides that the Republic of Sudan is a decentralized state with the following levels of government: the federal level, the regional or state level and the local level. The exercise of any powers at the regional (state) and local levels will be subsequently determined through other measures (laws).

NET ZERO TARGET

2050 proposed/in discussion. 1st NDC: 20% renewable share in power system by 2030.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Ranked 170 on Human Development Index.

[Sudan's NDC outlines that it is highly vulnerable to climate change and climate variability](#), predominantly a result of climatic and non-climatic factors. These factors in addition to the interaction of other multiple stresses such as ecosystem degradation, complex disasters and conflicts, and limited access to capital, markets, infrastructure and technology have all weakened people's ability to adapt to changes in climate. Frequency of extreme climatic shocks is increasing, particularly drought and floods. Frequent drought threatens about 19 million hectares of rain-fed mechanized and traditional farms, as well as the livelihoods of many pastoral and nomadic groups; more than 70% of Sudan's population's livelihood depends on this sector.

TANZANIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	11	0	7	59.73m	0.67%	N/A

SUMMARY

Tanzania's national climate framework consists of 4 laws, 11 policies and 7 climate targets. The [National Climate Change Strategy 2021-2026](#) (NCCS) discusses low emissions development pathways, climate financing and the mainstreaming of climate change issues into national and local government development plans and budgets. The policy also seeks to promote gender-responsive climate change adaptation and mitigation efforts. The policy details gaps in the implementation of the 2012 NCCS, such as inadequate awareness and understanding of climate change, and discusses improved mechanisms to address these. Research into climate change resilience and including climate change as a public health topic are features in two national laws. The 2005 [Environmental Management Act](#) instructs the Minister for Environment and relevant sector ministries to address climate change, with a focus on its impacts and adaptation measures.

- Ranked 163 on Human Development Index.

CONSTITUTIONAL SYSTEM

Tanzania is a unitary presidential democratic republic, with legislative power vested in both its government and its unicameral National Assembly. The Assembly has up to 357 members, 239 of which are elected by popular vote, 102 are women appointed by the president, 5 are members of the Zanzibar House of Representatives, 1 is filled by the Attorney General and up to 10 additional members may be appointed by the president.

All members serve five-year terms. Additionally, Zanzibar's House of Representatives, composed of 50 popularly elected members who serve 5-year terms, has exclusive jurisdiction over Zanzibar. There are two types of Bills: Government Bills and Private Members' Bills. Government Bills are introduced by a Minister or Attorney-General. Private Members' Bills are introduced by an MP who is not a minister or Attorney-general (a private member of the National Assembly). Before a Government Bill is introduced, it passes through a process of consultation and decision-making at the Ministerial level, Permanent Secretaries level, and finally the cabinet.

CONSTITUTION

Since 1977, several amendments have been applied to the original Constitution, which was last revised in 2005. Many of these are related to the relationship between the united government and the Zanzibar government. The Eighth Amendment (1992) established that a member of any registered political party could run for any political seat; coherently, new rules were defined governing the parties' registration. The Ninth Amendment reorganized presidential elections and introduced the possibility of impeachment by the Parliament; further, it separated the functions of President and Prime Minister.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Tanzania Agricultural Research Institute Act](#) (2016). Climate change resilience is included as one of the research topics.

[Public Health Act](#) (2010). Includes provisions related to the adoption of regulations with regard to Climate Change.

[Environmental Management Act](#) (2005). Provides for a legal and institutional framework for sustainable management of the environment. It also outlines principles for management, impact and risk assessments, prevention and control of pollution, waste management, environmental quality standards, public participation, compliance and enforcement. Also specifically addresses areas directly or indirectly relevant to climate change. The Act instructs the Minister for Environment (and relevant sector ministries) to take measures to address climate change, with a particular focus on the impacts of climate change and adaptation measures.

Policies:

[National Climate Change Strategy 2021-2026.](#) Emerging opportunities such as digital and blue economy initiatives, low emissions development pathways as well as climate financing are well prioritized in the Strategy. Enhance mainstreaming of climate change issues into national sector and local government development plans and budgets. Devise and implement strategic adaptation and mitigation measures in line with the national circumstances, requirements of climate change related multilateral environmental agreements, sustainable development goals (SDGs) and related bilateral and regional Agreements. Promote gender-responsive climate change adaptation and mitigation interventions.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

The Constitution makes provision for the establishment of local governments whose powers shall be provided for by an act of parliament. These powers may include the right to participate and involve the people in the planning and implementation of development programmes within their respective areas and generally throughout the country .

[Disaster Management Act](#) (2015). The Act designates Regional, District, Ward and Village Disaster Management Committees.

[Environmental Management Act](#) (2005). Regional Secretariats are empowered to designate Regional Environmental Management Experts. The Regional Environmental Management Expert (REME) is responsible for advising and overseeing implementation and enforcement of EMA at the regional level. Local Government Authorities (City, Municipal, District, Township) are empowered to designate or appoint Environmental Management Officers. The Act gives the Local Government Authorities mandate to ensure environmental compliance in their areas of jurisdiction. Additionally, local authorities are charged with drafting Environmental Action Plans relevant to their geographical areas, in compliance with the National Environmental Action Plan.

NET ZERO TARGET

2050 proposed/in discussion. [Strengthened NDC](#) commitments: commits to reduce greenhouse gas emissions economy-wide between 30-35% relative to the BAU scenario by 2030.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Record breaking rainfall & temperatures. The adverse effects associated with these extreme weather events affect agricultural production and food security, water resources, marine and coastal zones, public health, energy supply and demand, infrastructure, biodiversity, ecosystem services, and tourism. Therefore, existing climate vulnerability and future climate change adverse impacts are likely to curtail Tanzania's efforts from achieving projected economic growth, sustainable development and Vision 2025 goals and poverty reduction targets as well as quick COVID -19 recovery measures.

[National Climate Change Strategy 2021-2026](#): There have been some gaps in the implementation of the NCCS 2012, which require improved mechanisms to address them. These gaps include: inadequate awareness and understanding of the risks posed by climate change and variability to general public and decision makers; limited platform for hosting the inventory of resources and data availability; limited national capacity to undertake research to generate climate data and information to fill existing gaps and to conduct regular climate change impacts on; socio-economic and environmental monitoring; inadequate capacity (human resources and infrastructures) and inadequate financial resources in the implementation, monitoring and evaluation of climate change impacts at all levels.

Ranked 163 on Human Development Index.

TUNISIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	5	0	9	11.82m	0.08%	N/A

SUMMARY

Tunisia's national climate framework consists of 3 laws, 5 policies and 9 climate targets. The 2018 [Decree to operationalise the implementation of the Paris Agreement](#) establishes a management unit to monitor and coordinate relevant activities. The [Tunisian National strategy and action plan for biodiversity 2018-2030](#) seeks to protect Tunisia's diversity from the effects of climate change. Legislation also exists to establish the framework for renewable energy projects at the local level and for export purposes. Tunisia's updated NDC (10/10/2021) raises its GHG mitigation ambitions, with a goal of reducing national carbon intensity to 27% (unconditional) and 45% (conditional) by 2030, compared to its 2010 level. Tunisia is vulnerable to rising sea levels and escalating extreme weather events, particularly droughts and floods. The [Africa NDC Hub](#) states Tunisia is already experiencing water scarcity, and this is due to be exacerbated by climate change, with a decrease in conventional water resources estimated at approximately 28% by 2030.

- Ranked 95 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Tunisia is a representative democracy, a civil state, with an executive president, a legislature and judiciary. The President serves as head of state, a Prime Minister as head of government, a unicameral parliament & a civil law court system.

CONSTITUTION

The 2014 Constitution's preamble states a paragraph that illustrates the motives to set a new constitutional framework as follows: "With a view to building a republican, democratic and participatory system, in the framework of a civil state founded on the sovereignty of the people, exercised through the peaceful alternation of power through free elections, and on the principle of the separation and balance of powers, which guarantees the freedom of association in conformity with the principles of pluralism, an impartial administration, and good governance, which are the foundations of political competition, where the state guarantees the supremacy of the law and the respect for freedoms and human rights, the independence of the judiciary, the equality of rights and duties between all citizens, male and female, and equality between all regions." The country's Constitution has supremacy over all other laws.

[Constitution of the Republic of Tunisia](#). Provides for an environmental provision that simultaneously guaranteed the right to a healthy and balanced environment and the right to participate in the protection of the climate. Noteworthy, the wording does not imply any obligation or commitment from the State on the matter, other than eradicating pollution.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Law Relating to the Generation of Renewable Energy \(2015\)](#). Sets the legal framework for the realisation of renewable energy projects at the local scale and for export purposes.

[1991 law](#) sets the framework to organise Tunisia's operational response to different natural disasters.

Policies:

2018 [Decree to operationalise the implementation of the Paris Agreement](#). Decree establishes a management unit to monitor and coordinate activities relating to the implementation of the Paris Agreement. It defines its missions, its organisation and the modalities of its functioning.

[Tunisian National strategy and action plan for biodiversity 2018-2030](#).

[National energy management strategy \(2014\)](#). Government's strategy to enhance its energy production and demand, notably by increasing the share of renewable sources in the power mix, and by improving energy efficiency.

[National Sustainable Development Strategy \(2007\)](#).

[Decree establishing the powers of the national Renewable Energy Agency \(2004\)](#). Responsibilities include mitigation of GHG emissions and developing a GHG inventory.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[National Sustainable Development Strategy \(2007\)](#). Regional environmental structures are increasingly playing an important role in protecting the environment and contributing to the promotion of sustainable development in the implementation of the national decentralisation policy. These regional structures will be particularly involved at this level in the fight against all forms of environmental damage and in the integration of the environmental component in the planning of regional programmes.

NET ZERO TARGET

No target. The updated NDC raises Tunisia's greenhouse gas emissions mitigation ambitions, by raising the goal of reducing national carbon intensity to 27% (unconditional) and 45% (conditional) by 2030, compared to its 2010 level. In cumulative terms over the 2021-2030 period, the emission reductions compared to the BAU trajectory will total 87.5 MtCO₂. These emission reductions are believed to come predominantly from the energy sector (72%), followed by LULUCF (13%), and industrial processes (9%). The rest of the mitigation results (6%) stem from the low-carbon policy of the waste sector.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Tunisia Climate Risk Country Profile](#). Tunisia is considered to be one of the countries most exposed to climate change in the Mediterranean. The main risks which it is likely to confront are temperature increases, reduced precipitation, rising sea levels and escalating extreme weather phenomena (floods and droughts). These risks are likely to result in major environmental and socio-economic vulnerability. Already experiencing water scarcity. This situation is due to be exacerbated by climate change over the coming years, with the decrease in conventional water resources estimated at about 28 per cent by 2030. Following the expected rise in the sea level, losses through the salinization of coastal aquifers would account for about 50 per cent of the current resources of these aquifers by 2030. The physical vulnerability of the Tunisian coastline to rising sea levels already has various direct and indirect socio-economic consequences.

UGANDA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	9	2	27	45.74m	0.17	N/A

SUMMARY

Uganda's national climate framework consists of 3 laws, 9 policies and 27 climate targets. Uganda's [National Climate Change Act 2021](#) mandates the development of a Framework Strategy for Climate Change in Uganda, a Climate Change Action Plan and a District Climate Action Plan, as well as binding into law the UN Framework Convention on Climate Change, the Kyoto Protocol and the Paris Agreement. The [Third National Development Plan \(NDPIII\) \(2020/21 - 2024/25\)](#) (2020) includes targets such as increasing forest cover from 9.1% to 15% by 2025 and increasing the share of clean energy used for cooking from 15% (2018/19) to 50% by 2025. The increase in frequency and severity of droughts due to climate change in Uganda is leading to frequent crop failures.

- Ranked 159 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Uganda is a presidential republic. The president is head of state and head of government. The unicameral legislature consists of the National Assembly, which has 529 seats, 499 of which are directly elected and 30 are indirectly elected. In addition to the 529 members, the president may appoint any person outside parliament to the cabinet.

CONSTITUTION

The Ugandan constitution, the supreme law, was last amended in 2017. The constitution states there should be one woman representative for every district and makes provisions for representatives of the army, youth, workers, persons with disabilities and other groups as determined by parliament. 30 members are indirectly elected to represent these groups, 20% of which must be women. The constitution was amended in 2017 to extend the terms of office for the president, parliament and local government from five to seven years and removed the presidential age limit of 75 years.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[National Climate Change Act 2021](#). Gives the following agreements the force of law in Uganda: the UN Framework Convention on Climate Change, the Kyoto Protocol and the Paris Agreement. The Act also mandates the development of a Framework Strategy for Climate Change in Uganda, a Climate Change Action Plan and a District Climate Action Plan.

[The National Environment Act \(2019\)](#). Provides for emerging environmental issues including climate change. Prioritises approaches in the implementation of public and private projects that increase the environment and people's resilience to climate change. Climate change considerations are included within the functions of the Policy Committee on Environment, including providing guidance to government on the harmonisation of policies with environmental and climate change considerations. In November 2020, four civil society organisations filed a lawsuit against the governments of Uganda and Tanzania in the East African Court of Justice seeking an injunction to stop the East African Crude Oil Pipeline. Whether agreements to build the pipeline violate environmental and human rights impact assessments as set out in national legislation, such as the Ugandan National Environment Act (2019) policy, is a core objective of the case. The case is pending.

[Uganda National Meteorological Authority Act \(2012\)](#). Established the Ugandan National Meteorological Society, whose functions include monitoring and analysing climate and climate trends and their implications for socio-economic development. To assist the government in meeting its international obligations in agreements related to climate change.

Policies:

[Third National Development Plan \(NDP III\) \(2020/21 - 2024/25\)](#) (2020). Third of a series of six NDPs which will deliver aspirations in Uganda Vision 2040. Natural Resources, Environment, Climate Change, Land and Water Management Programme is identified in the NDP III. This programme aims to stop, reduce and reverse environmental degradation and climate change effects as well as improve the utilisation of natural resources for livelihood security and sustainable economic growth. Key expected outcomes include improved land use and management as well as increased forest and wetland cover. On the topic of natural resources, the NDP III states that "commercial production of oil remains viable even though the window for profitable exploitation of oil is narrowing as concerns over climate change increase." The NDP III states that whilst Uganda's contributions to climate change have been minimal, the effects of climate change can be seen within its borders, and Uganda intends to fulfil its international obligations regarding emissions reductions and adaptation. The NDP III includes targets such as increasing forest cover from 9.1% to 15% by 2025 and increasing the share of clean energy used for cooking from 15% (2018/19) to 50% by 2025.

[National Budget Framework Paper FY 2019/20 – FY 2023/24](#) (2018). Aims to provide relief aid in response to natural disasters including climate change induced floods and landslides. Includes programmes to build resilience within agriculture and aquaculture to the effects of climate change. It is noted within the budget that apart from the climate change department within the Environment and Natural Resources sector, "all the other departments in the sector lack gender mainstreaming concerns in the planning, monitoring, budgeting and reporting systems on all activities". [Link to National Budget Framework Paper FY 2019/20 - FY 2023/24](#).

[Uganda Green Growth Development Strategy 2017/18 - 2030/31](#) (2017). Objectives include supporting a "low-emissions economic growth pathway integrating resource use efficiency, climate resilience, disaster risk reduction and optimal use of natural capital" and establishing governance and financing frameworks to implement this development strategy.

[National Climate Change Policy \(2015\)](#). Policy goal is to ensure a coordinated approach to climate change and low-carbon development for sustainable development in Uganda. Key initiatives include reducing GHG emissions from the transport sector and encouraging the use

of cleaner fuels. Adaptation and mitigation policy priorities are listed and include the agriculture and livestock sector, forestry and the wildlife and tourism sector. Common policy priorities include mainstreaming gender issues in mitigation and adaptation approaches and recognising the vulnerability of women and children from climate change and their key role in tackling the issue.

[Uganda's Vision 2040](#) (2013). There will be an emphasis on renewable energy and the government will invest in research & development and provide incentives to encourage the use of renewables. The Vision states: "Uganda is signatory to the United Nations Framework Convention on Climate Change (UNFCCC) and ratified the Kyoto protocol, and is privy to a number of Multilateral Environmental Agreements (MEAs) that have strong links with climate change. National plans and policies include the [National Adaptation Plan of Action \(NAPA 2007\)](#), [National Development Plan \(NDP 2010/11 – 2014/15\)](#), the [Renewable energy Policy \(2007\)](#), the [Disaster Management and Preparedness Policy](#) inter alia." The government will develop appropriate adaptation and mitigation strategies over the Vision 2040 period. A monitoring and evaluation system will be put in place to observe the implementation of national guidelines.

[National Environment Management Policy \(NEMP\)](#) (1995). "Specifically, the NEMP recognizes climate as a 'vital natural resource' that needs to be monitored in order to better direct land use, encourage sustainable economic development, and manage air pollution, and GHG emissions."

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

[Uganda National Meteorological Authority Act \(2012\)](#). Provides for capacity building at a local government level for implementing climate and weather programmes through regional offices of the National Meteorological Society.

[National Budget Framework Paper FY 2019/20 – FY 2023/24](#). The population will be mobilised to take up climate change mitigation measures by replicating best practices for sustainable livelihoods being implemented by model villages.

[Uganda Green Growth Development Strategy 2017/18 - 2030/31](#) (2017). Strategy is to be implemented at local authority levels through integration with their planning and budgeting tools. In the context of funding at a local government level through financing instruments, the "Local Government Act Cap 234" is mentioned as aiming to improve solid waste management, with a reduction in GHG emissions. Regulations for the management of wetlands will be strengthened for local governments and urban authorities.

[Uganda's Vision 2040](#) (2013). Guidelines will be developed and popularised for incorporating climate change in local government plans and budgets. Coordination between national and local governments will be strengthened and the capacity of local governments will be increased in relation to climate change.

[National Climate Change Policy \(2015\)](#). Outlines management arrangements at district levels for implementing the strategies in the National Climate Change Policy (2015) where relevant. Departments will ensure climate change issues within their sector are integrated into their District Development Plans. Provisions will be made so districts can address climate change priorities along with implementing performance indicators.

NET ZERO TARGET

No net zero target.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Third National Development Plan \(NDP III\) \(2020/21 - 2024/25\)](#) lists a number of outstanding challenges, including forest cover reduction and wetland degradation and encroachment leading to increased risk from climate change. From 1986/87 to 2017/18, forest cover reduced from 20% to 9.5% and wetland cover reduced from 13% to 10.9%. The NDP III states "This has led to climate change as evidenced by severe weather patterns, prolonged droughts and floods. The implication is increased vulnerabilities and disparities in incomes as well as loss of livelihood to the population and reduction in GDP growth rates. The continued environmental degradation, loss of forest cover and wetlands is impacting negatively on Uganda's tourism, agriculture, among others; therefore, needs to be addressed urgently." The increase in frequency and severity of droughts is leading to frequent crop failures, which the NDP III states largely contributed to a reversal in the poverty levels in 2017 for the first time in over a decade.

[National Budget Framework Paper FY 2019/20 – FY 2023/24](#). Effects of climate change have heightened conflicts around natural resources.

[Uganda's Vision 2040](#) (2013) states that "Uganda's development is constrained by a number of factors" including "weak public sector management and administration", an example of which is stated as "weak management of environment and climate change." The Vision states that one of the effects of climate change Uganda is currently experiencing is the emergence of malaria in areas which were previously free of mosquitos.

YEMEN

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	4	0	8	29.83 m	0.05%	N/A

SUMMARY

Yemen's national climate framework consists of 2 laws, 4 policies and 8 targets. The [National Agriculture Sector Strategy 2012-2016](#) aims at increasing production, food security and climate resilience, alongside fighting rural poverty and malnutrition. Yemen's economy largely relies on its rural natural resources, and more than 75% of the population is engaged in farming and pastoralism, making them highly vulnerable to climate change. Yemen has been suffering from famine since 2016 because of the civil war. Whilst there are laws and policies on renewable energy and environmental protection, these are over 10 years old. The 2009 [National Strategy for Renewable Energy and Energy Efficiency](#) aims for a 15% increase in energy efficiency in the power sector by 2025 against a 2009 baseline.

- Ranked 179 on Human Development Index.

CONSTITUTIONAL SYSTEM

Yemen is a republic with a bicameral legislature. Under the 1991 Constitution, an elected president, an elected 301-seat Assembly of Representatives, and an appointed 111-member Shura Council share power. The President is the head of state, and the Prime Minister is the head of government. The 1991 constitution provides that the president be elected by popular vote from at least two candidates endorsed by at least 15 members of the Parliament. The prime minister, in turn, is appointed by the president and must be approved by two-thirds of the Parliament. The presidential term of office is seven years, and the parliamentary term of elected office is six years.

CONSTITUTION

The Constitution of Yemen was adopted in 1991 and last amended in 2015. The House of Representatives shall ratify international treaties and Conventions of a general political and economic nature, in whatsoever form or level, and in particular those connected to defense, alliance, conciliation, peace or border issues. All international Conventions and treaties which involve financial commitments on part of the State or require a law for enactment shall also be ratified by the House of Representatives.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[2009 Electricity Law](#). Seeks to promote renewable and sustainable sources of energy.

[1995 Law on Environment Protection](#). This law aims at protecting the environment, organising conservation and maintenance and maintaining the safety and balance of its natural ecosystems. It also aims at 1) combating all types of pollution resulting from implementation of economic, agricultural, industrial, construction development programs, 2) protecting local species, 3) protecting society and health, 4) protecting the national environment from activities performed out of the national territory, 5) implementing international obligations, including the protection of the ozone layer and the climate.

Policies:

[National Agriculture Sector Strategy 2012-2016](#) The Strategy aims in particular at increasing production, food security and climate resilience, and fighting rural poverty and malnutrition.

[2009 National Strategy for Renewable Energy and Energy Efficiency](#). Seeks to promote renewable power generation and energy efficiency. Has a reference to reducing greenhouse gas emissions. 15% increase in energy efficiency in the power sector by 2025 against a 2009 baseline.

[2005 establishment of the Public Environmental Protection Authority](#). Reduce air pollution and mitigate the effects of climate change.

[National Strategy for Environmental Sustainability 2005-2015 and National Environmental Action Plan 2005-2010](#). Focus on increasing sustainability in four key areas: water, land resources, biological diversity and coastal and the marine environment, and waste management. It recognizes the potentially negative consequences of climate change for coastal ecosystems, land resources, biodiversity, and migration. The National Strategy for Environmental Sustainability 2005-2015 and National Environmental Action Plan 2005-2010 set the government's policy objectives for sustainable water and land use management, coastal zone and fisheries management, improving air quality, sustainable forest management, and reducing waste.

NET ZERO TARGET

2050 proposed/in discussion. [Intended NDC](#) states: 1% (unconditional) and 14% (conditional) reduction (representing estimated total cumulative GHG reduction of about 35 MtCO₂e from 2020 through 2030) in GHG emissions by 2030 compared to the BAU scenario.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Yemen is highly vulnerable to climate change-related impacts such as drought, extreme flooding, pests, sudden disease outbreaks, changes of rainfall patterns, increased storm frequency/severity and sea level rise. These are serious concerns as Yemen's economy largely depends on its rural natural resources. Moreover, more than 75% of the population is rural-based engaged in farming and pastoralism and hence highly reliant on favorable climatic conditions for their livelihoods. Yemen has been suffering from a famine since 2016 as a result of the Civil War. More than 50,000 children in Yemen died from starvation in 2017. The famine is being compounded by an outbreak of cholera that has affected more than one million people. The Saudi Arabian-led intervention in Yemen and blockade of Yemen have contributed to the famine.

Ranked 179 on Human Development Index.

AFGHANISTAN

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	11	0	4	38.93 m	0.2%	N/A

SUMMARY

Afghanistan's national climate framework consists of 3 laws, 11 policies and 4 targets. The Taliban were overthrown by a United States-led invasion in 2001 which began a 20-year-long war that concluded with the 2021 Taliban offensive and the resulting fall of Kabul in August 2021, with the Taliban returning to power and regaining control of the government. Following the effective collapse of the Islamic Republic of Afghanistan during the 2021 Taliban offensive, the Taliban declared the country an Islamic Emirate. A new caretaker government was announced on 7 September. As of 8 September 2021, no other country had formally recognized the Islamic Emirate of Afghanistan as the de jure government of Afghanistan. Afghanistan is being confronted with land degradation and desertification, with [35% of Afghanistan's population suffering from food insecurity](#) which is projected to increase. The [Law on Disaster Response, Management and Preparedness](#) passed in 2012 did not mention climate or climate change. However, the [Afghanistan National Peace and Development Framework \(ANPDF\) 2017-2021](#) does establish measures to mitigate the effects of climate change, notably in the energy sector but also by expanding agroforestry and reforestation to support environmental conservation and income generation for farmers.

- Ranked 169 on Human Development Index.

CONSTITUTIONAL SYSTEM

The Parliament of Afghanistan, the Jirga (National Assembly), comprising the Wolesi Jirga (House of the People) and the Meshrano Jirga (House of Elders), was effectively dissolved following the Taliban takeover in August 2021. The Taliban announced an interim government in September 2021.

CONSTITUTION

Afghanistan Constitution has been done away with since the Taliban offensive and the Taliban have restored their constitution drafted in 1998. The Taliban is considered to be a theocratic monarchial system with a supreme leader as its king. The previous 2004 Constitution gave equal rights to men and women, and secured seats for women in the House of Elders (now dissolved).

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Legislative Decree on the Endorsement of the Power Services Regulation Act \(2015\)](#). Including supplying electrical energy from natural resources of the country and imported energy.

[Law on Disaster Response, Management, and Preparedness \(2012\)](#). Enacted to oversee the management, prevention and mitigation of causes of all sorts of disasters, as well as post disaster management in the country. The natural disasters in scope include droughts, landslide, forest fires "and others". Does not mention climate or climate change.

[The Law On Regulating Forest Affairs \(2011\)](#). Ensure a sustainable management and regulation of forest resources.

Policies:

[Afghanistan National Peace and Development Framework \(ANPDF\) 2017-2021](#). The Framework establishes measures to mitigate the effects of climate change, notably in the energy sector but also by expanding agroforestry and reforestation to support environmental conservation and income generation for farmers. It also creates strategies to mitigate the adverse effects of climate change across the trans-Himalayan region.

[National Comprehensive Agriculture Development Priority Program 2016-2020](#). Development & reform of agricultural sector. Includes goal of climate-sensitive natural resource management. This goal aims at ensuring that the Program only supports sustainable projects that depend on natural resources, create a green environment, conserve soil, water, and protect biodiversity. Foresteries are one of the pillars of this goal.

[National Renewable Energy Policy \(2015\)](#). Promotes the production and use of energy from renewable sources. Sets development targets for the years 2015-2020 and 2021-2032. Intends to foster renewable energies through measures such as promoting technical solutions to obtain carbon credits & on-grid and off-grid projects as well as private investment.

[National Biodiversity Strategy and Action Plan \(2014\)](#). This document notably examines the threats to biodiversity of climate change and desertification. The document establishes a number of sectoral targets and subtargets to organise the resilience of the components of biodiversity to adapt to climate change maintained and enhanced; pollution and its impacts on biodiversity reduced.

[Disaster management strategy \(2014-2017\)](#).

NET ZERO TARGET

2050 proposed/in discussion. 1st NDC: 23/11/2016. 13.6% reduction in GHG emissions by 2030 compared to a BAU scenario, conditional on external support. This was pre the Taliban 2021 offensive.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Afghanistan is being confronted with desertification & land degradation. [35% of Afghanistan's population is suffering from food insecurity](#), with an increase projected. The increasing droughts [could lead to a boom of the opium production](#) in Afghanistan, as opium is drought-resistant. In addition to droughts, extreme rainfall will increase due to climate change, which could lead to landslides. As of August 2021, the Islamic Emirate is undergoing a transitional political period with an unofficial Coordination Council led by senior statesmen in the process of coordinating the transfer of the state institutions of the Islamic Republic of Afghanistan to the Taliban.

Ranked 169 on Human Development Index.

BANGLADESH

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	14	0	22	164.7 m	0.44%	N/A

SUMMARY

Bangladesh's national climate framework consists of 4 laws, 14 policies and 22 targets. The [National Action Plan for Clean Cooking 2020-2030](#) aims to reduce air pollution and GHG emissions through cleaner cooking methods. The [Bangladesh Delta Plan 2100](#) (2018) seeks to ensure safety from floods and climate disasters, which are particularly devastating for the population of Bangladesh due to its low elevation and high population density, and inadequate infrastructure. The [Bangladesh Climate Fiscal Framework 2014](#) policy was published by the Ministry of Finance with goals including dividing climate funds and ensuring their allocation to relevant sectors. Furthermore, the policy recommends estimating long-term climate financial needs by identifying potential climate-related expenditures across government ministries. The [Bangladesh Climate Change and Gender Action Plan](#), passed in 2013, defines how the Ministry of Environment and Forest will promote gender equality and the empowerment of women whilst tackling climate change issues. In 2009, the Ministry also published the [Bangladesh Climate Change Strategy and Action Plan \(BCCSAP\)](#), which sets out 44 programmes over the short, medium and long term within areas such as food security, low carbon development and infrastructure. In 2019, the Bangladesh parliament [declared that climate change was a planetary emergency](#).

- Ranked 133 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Parliamentary Republic. The Parliament, known as the "House of the Nation", is the sovereign law-making body, vested with the legislative power of the Republic. It has 350 members of which 300 are directly elected for five-year terms in single seat constituencies. The remaining 50 seats are reserved for women, and these positions are selected by either the ruling party, or the ruling coalition. Statutory law is made by Parliament. Laws are proposed, prepared and processed by the executive, which is the Cabinet. The Prime Minister is the head of state, elected by Parliament. The President occupies a ceremonial post with no authority exercised over the running of the state.

CONSTITUTION

Bangladesh constitution was adopted in 1972 and was last amended in 2018. The Constitution is the Supreme law. It provides for a president, prime minister, cabinet and parliament, which includes secured seats for women. The principles of nationalism, socialism, democracy and secularism contribute to the fundamental principles of state policy.

CLIMATE POLICIES AT NATIONAL LEVEL

[Sustainable and Renewable Energy Development Authority Act \(2012\)](#). This act, predicated on the aim of increasing energy security, creates an independent authority, the Sustainable and Renewable Energy Development Authority, to promote the development and use of renewable energy.

[2012 Disaster Management Act](#). The Act is intended to help in promoting a comprehensive disaster management programme upholding the all-hazard, all-risk and all-sector approach where risk reduction as a core element of disaster management has equal emphasis with emergency response management with greater focus on equitable and sustainable development.

[The Climate Change Trust Fund Act \(2010\)](#). Stipulates allocating an initial budget of USD100m per year for three years between 2009 and 2011. It stipulates that 66% of its budget will be spent on the implementation of projects/programmes prioritised in the BCCSAP. The remaining 34% will be maintained as a deposit for emergencies.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Helvetas, Bangladesh](#): "The Local Government Initiative on Climate Change (LoGIC) enhances the capacity of vulnerable communities, Local Government Institutions and Civil Society Organizations for planning and financing climate change adaptation in climate vulnerable areas. The project is a multi-donor initiative of the Government of Bangladesh, the UN Development Programme, the UN Capital Development Fund, the European Union and the Swedish International Development Cooperation Agency." the project priorities will be achieved through three sets of actions: capacity building, providing access to climate change funds and policy advocacy - [UNDP](#).

NET ZERO TARGET

2030 proposed/in discussion. Updated NDC: In the unconditional scenario, GHG emissions would be reduced by 27.56 Mt CO₂e (6.73%) below BAU in 2030 in the respective sectors. In the conditional scenario, GHG emissions would be reduced by 61.9 Mt CO₂e (15.12%) below BAU in 2030 in the respective sectors

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Low elevation, high population density](#) and inadequate infrastructure all put the nation in harm's way, along with an economy that is heavily reliant on farming. Because of the country's natural susceptibility to extreme weather, the people of Bangladesh have always used migration as a coping strategy. However, as conditions intensify under climate change, more people are being driven from their homes and land by more frequent and severe hazards. Sea level rise, storms, cyclones, drought, erosion, landslides, flooding and salinization are already displacing large numbers of people. It has been estimated that by 2050, one in every seven people in Bangladesh will be displaced by climate change. Up to 18 million people may have to move because of sea level rise alone.

BHUTAN

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
6	16	0	7	771 612	N/A	2°C Compa- tible

SUMMARY

Bhutan's national climate framework consists of 6 laws, 16 policies and 7 targets. In 2021, the [Bhutan Sustainable Hydropower Development Policy \(SHDP\)](#) made hydropower a core energy source for the country, and set out to protect this resource from the adverse effects of climate change, notably by storing water from melting glaciers. The [Renewable Natural Resources \(RNR\) Strategy 2040](#) includes a goal of increasing Bhutan's resilience to climate change and focussing on low emission development. Initiatives to achieve these goals include maintaining the carbon sequestration potential of forests and developing climate smart and resilient farming technologies. The [CAT](#) gives Bhutan an overall rating of "2°C Compatible", however this is being updated soon. Furthermore, the CAT states that whilst Bhutan's goal to remain carbon neutral is admirable, increasing emissions and its status as a Least Developed Country could put it in a difficult position with regards to its long-term low-carbon transition, and lead to it no longer being carbon neutral. The [Climate Change Policy of the Kingdom of Bhutan 2020](#) also reiterates its aims to maintain its carbon neutrality. The policy provides guidance on achieving a climate resilient and carbon neutral economy that contributes to gross national happiness.

- Ranked 129 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Bhutan is a constitutional monarchy with a parliamentary form of government. The Druk Gyalpo (Dragon King) is the head of state. The political system grants universal suffrage. It consists of the National Council, an upper house with 25 elected members; and the National Assembly with 47 elected lawmakers from political parties. Executive power is exercised by the Council of Ministers led by the Prime Minister. Legislative power is vested in both the government and the National Assembly. Judicial power is vested in the courts. The legal system originates from the semi-theocratic Tsa Yig code, and was influenced by English common law during the 20th century.

CONSTITUTION

The Constitution adopted in 2008 defines the Kingdom of Bhutan as a democratic constitutional monarchy belonging to the people of the Kingdom. The Constitution is the supreme law of the State and affirms the authority of legal precedent. Article 5 on the environment provides that every Bhutanese is a trustee of the environment and natural resources and it is a fundamental duty of every citizen to contribute to the protection of the natural environment, conservation of the rich biodiversity of Bhutan and prevention of all forms of ecological degradation including noise, visual and physical pollution through the adoption and support of environment friendly practices and policies.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Disaster Management Act of Bhutan \(2013\)](#). Aims to establish and strengthen institutional capacity for disaster management, the mainstreaming of disaster risk reduction, and for integrated and coordinated disaster management focusing on community participation.

[National Environment Protection Act \(2007\)](#). Aims at conserving and protecting the environment through actions led by the National Environment Commission (or administrative successors), and to promote sustainable development.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Power and authority is decentralized by the Constitution to local governments to ensure local participation in the development and management of social, economic and environmental well-being.

[Disaster Management Act of Bhutan \(2013\)](#). Includes aims for disaster management focusing on community participation.

NET ZERO TARGET

Achieved (self-declared). 2nd NDC reaffirmed commitment to remain carbon neutral. In the second NDC, Bhutan has provided much greater detail on the types of mitigation measures it seeks to implement, with international support.

CLIMATE ACTION TRACKER RATING

2°C Compatible (being updated soon). Bhutan's second NDC, submitted in June 2021, did not change the country's carbon neutral goal that it's had since 2009, and has been achieving. However, as a result of the latest inventory data, the ultimate emissions level of this target has increased. While Bhutan's target remains the same, the effective emissions limit of that target has increased due to the latest inventory data which shows a larger land sector sink. In the first NDC, the net sink was estimated to be 6.3MtCO2e per year and is now 7.8 MtCO2e. The CAT have rated the second NDC as being stronger than the first NDC on

the basis of the further detail on mitigation measures Bhutan seeks to implement with international support. Recent positive developments show progress in climate mitigation in the country. They include the National Energy Efficiency and Conservation Policy released in November 2019, that aims to lower the energy intensity of the economy, focusing on buildings, appliances and industry. The recently adopted National Waste Management Strategy is another example. It sets a target of zero waste by 2030.

ISSUES & CHALLENGES

CAT: While Bhutan's goal to remain carbon neutral is admirable, especially given its Least Developed Country status, increasing energy and industry emissions could put Bhutan in a difficult position for its long-term low-carbon transition, risking a breakdown of its carbon neutrality.

CAMBODIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	26	0	13	16.72 m	0.14%	N/A

SUMMARY

Cambodia's national climate framework consists of 2 laws, 26 policies and 13 targets. There are multiple climate change action plan policies developed for different sectors, such as the rural development sector and tourism sector. The [Gender and Climate Change Action Plan \(2014-2018\)](#) discusses the planning and implementation of pilot measures with a focus on gender aspects and the role of women in coping with climate change. The [Climate Change Financing Framework](#), passed in 2015, identifies sources of climate finance and uses potential trends over the next 5 to 10 years to propose realistic costings of the country's climate change response. The 2013 [Cambodia Climate Change Strategic Plan](#) seeks to build cohesion between the various government policies to address mitigation, adaptation, GHG emissions and low-carbon development. It seeks to set goals to develop towards a green and resilient economy. Strategies include strengthening national responses to climate change issues within institutions and improving water and energy security. At COP26, the Cambodian Environment Minister pledged to reduce emissions by 42% by 2030.

- Ranked 144 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The government is a constitutional monarchy operated as a parliamentary representative democracy. The Prime Minister of Cambodia, an office held by Hun Sen since 1985, is the head of government, while the King of Cambodia is the head of state. The prime minister is appointed by the king, on the advice and with the approval of the National Assembly. The prime minister and the ministerial appointees exercise executive power. Legislative powers are shared by the executive and the bicameral Parliament of Cambodia which consists of a lower house, the National Assembly and an upper house, the Senate. Members of the 123-seat Assembly are elected through a system of proportional representation and serve for a maximum term of five years. The Senate has 61 seats, two of which are appointed by the king and two others by the National Assembly, and the rest elected by the commune councillors from 24 provinces of Cambodia. Senators serve six-year terms. Since the 2017 crackdowns on political dissent and free press, [Cambodia has been described](#) as a de facto one-party state.

CONSTITUTION

The [Cambodian Constitution](#) adopted in 1993 and last amended in 2008 aims to restore Cambodia into an “Island of Peace” based on a multi-party liberal democratic regime guaranteeing human rights and the respect of law. It provides that Cambodia is a Kingdom with a King who shall rule according to the Constitution and to the principles of liberal democracy and pluralism.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Law on Disaster Management \(2015\)](#). Regulations and measures will be formulated for strengthening public awareness and cooperation in the development and implementation of hazard risk prevention programmes, including the climate change adaptation.

[Law on the adoption of the National Strategic Development Plan \(NSDP\) 2019-2023](#). Detailing Cambodia's strategy to achieve a wide range of development targets over the period 2019- 2023. These include a curbing of deforestation and a strengthening of renewable energy sources.

Policies:

[Climate Change Action Plan for Mines and Energy 2015-2018](#). Includes climate proofing of future energy infrastructure, decoupling economic growth and sectors' future development from GHG emissions.

[Climate Action Plan of Ministry of Environment 2016-2018](#). Includes following actions: to promote climate resilience through improving food, water and energy security & to reduce sectoral, regional, gender vulnerability and health risks to climate change impacts.

Cambodia has further climate change policies including a financing framework, & action plan on industry and handicraft sectors.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Law on Disaster Management](#). NCDM shall issue a guideline to the sub-national committees for disaster management, ministries-institutions, armed forces, public sector, private sector and civil society to conduct risk assessments and explore the measures, methodologies, and necessary technology for disaster risk reduction and climate change adaptation. [Law on the adoption of the National Strategic Development Plan \(NSDP\) 2019-2023](#). Undertaking an inventory of available local DRR strategies/plans and work towards achieving the Sendai Framework Target on “risk-informed local DRR strategies/plans” by 2020.

NET ZERO TARGET

Achieved (self-declared). Updated NDC: Cambodia has proposed a 42% reduction in GHG emission below BAU by 2030. The majority of targets identified are conditional on international support.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Climate Links: The country is particularly challenged given its low adaptive capacity, still-prevalent poverty, and geographic location. Increased temperatures, drought, and changes in seasonal rainfall patterns, in combination with extensive damming for hydropower throughout the Mekong Basin, threaten to impact food security and human health through reduced freshwater availability which may in turn reduce agricultural and fishery production.

FIJI

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	8	0	15	896 444	0.0%	N/A

SUMMARY

Fiji's national climate framework consists of 3 laws, 8 policies and 15 climate targets. The [Climate Change Act 2021](#) established various committees and taskforces and seeks to set the legal framework for the country's mitigation, adaptation and disaster risk management strategies. The law also aims to relocate at-risk communities and safeguard their rights, an important aim due to the high vulnerability of Fiji to rising sea levels, coastal erosion and extreme weather. Legal frameworks are also established for carbon sequestration, carbon stocks and emissions reduction projects. It also established a target of net zero for 2050. The [Fiji Low Emission Development Strategy 2018-2050](#) policy defines a pathway for low-emission development, and the [National Climate Change Policy 2018-2030](#) provides high-level guidance on achieving long-term, climate resilient development.

- Ranked 93 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Politics in Fiji normally take place in the framework of a parliamentary representative democratic republic wherein the Prime Minister of Fiji is the head of government and the President the Head of State, and of a multi-party system. Executive power is exercised by the government, legislative power is vested in both the government and the Parliament of Fiji, and the judiciary is independent of the executive and the legislature. Actual executive power is in the hands of the cabinet, presided over by the Prime Minister. The Prime Minister is elected by Parliament, under the 2013 Constitution of Fiji.

CONSTITUTION

The Constitution is the supreme law. Came into effect in 2013. Any attempt to establish a government other than in accordance with the constitution is unlawful. Following the 2006 Fijian coup d'état, the power was subsumed by the military. Nominal head of state Ratu Josefa Iloilo abrogated the Constitution of Fiji and dismissed all Courts, after the Court of Appeal ruled that the post-coup Bainimarama government was illegal. A new Constitution was promulgated in September 2013, and a general election was held in September 2014. Under the 2013 Constitution, Fiji's Parliament is unicameral. Its 50 members are elected for

four-year terms by Party-list proportional representation, with the entire country voting as a single constituency. To win election to Parliament, a political party (or an independent candidate) must win five percent of the total valid vote nationwide. Fiji's system differs from that of many other countries using the party-list system, however, in that voters do not vote for a party, as such, but for an individual candidate.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Climate Change Act 2021](#). Establishes the National Climate Change Coordination Committee, the National Adaptation Plan Steering Committee, the Fijian Adaptation Registry, the Fijian Taskforce on the Relocation and Displacement of Communities Vulnerable to the Impacts of Climate Change, the National Ocean Policy Steering Committee, and may establish a private sector advisory committee. Net zero by 2050.

Policies:

[Fiji Low Emission Development Strategy 2018-2050](#). This document aims at defining pathways to achieve low emission development in Fiji until 2050. The strategy lays out sectoral targets for decarbonisation, determines the government's strategy for adaptation and resilience, examines opportunities for green jobs, aims to foster education and raise awareness, and determines how the implementation of this strategy will be ensured through governance, monitoring and evaluation.

[National Climate Change Policy 2018-2030](#). The purpose of NCCP is to provide the high-level guidance, principles, institutional architecture and objectives required to establish and support a long-term climate-resilient development.

NET ZERO TARGET

Net zero by 2050. In policy documents [Climate Change Act 2021](#). Updated NDC: To reduce 30% of BAU CO₂ emissions from the energy sector by 2030. As a contribution to Target 1, to reach close to 100% renewable energy power generation (grid-connected) by 2030, thus reducing an expected 20% of energy sector CO₂ emissions under a BAU scenario.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Fiji is particularly vulnerable to rising sea levels, coastal erosion and extreme weather. These changes, along with temperature rise, will displace Fijian communities and will prove disruptive to the national economy - tourism, agriculture and fisheries, the largest contributors to the nation's GDP, will be severely impacted by climate change causing increases in poverty and food insecurity.

KIRIBATI

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
1	11	0	25	119 446	0.0%	N/A

SUMMARY

Kiribati's national climate framework consists of 1 law, 11 policies and 25 climate targets. The [Kiribati Joint Implementation Plans for Climate Change and Disaster Risk Management 2014-2023 and 2019-2028](#) aims to increase resilience through sustainable adaptation and disaster risk reduction. This policy formalises the role of the Kiribati National Expert Group on Climate Change and Disaster Risk Management as the main advisory body, coordination mechanism and entry point for climate change initiatives. The policy also includes specific goals, such as strengthening and greening the private sector, increasing water and food security and enhanced effectiveness of disaster early warning systems and emergency management. The [Climate Change Knowledge Portal](#) rates Kiribati as one of the most vulnerable nations in the world to climate change. The village of Tebunginako has already had to relocate due to coastal erosion and saltwater intrusion. The 2018 [Kiribati Climate Change Policy](#) includes climate change adaptation, mitigation and disaster risk management as key focusses, recognising the importance of coordinated, multi-sectoral, multi-partner and whole-island approaches.

- Ranked 134 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The executive branch consists of a president (te Beretitenti), a vice-president and a cabinet. The president, who is also chief of the cabinet, is directly elected by the citizens, after the legislature nominates three or four persons from among its members to be candidates in the ensuing presidential election. The president is limited to serving three four-year terms, and remains a member of the assembly. The cabinet is composed of the president, vice-president, and 13 ministers (appointed by the president) who are also ministers of parliament. The legislative branch is the unicameral Maneaba ni Maungatabu (House of Assembly). There are a total of 21 inhabited islands in Kiribati. Each inhabited island has its own council with elected members who handle local affairs.

CONSTITUTION

The Constitution of Kiribati, promulgated 12 July 1979 and last revised in 2013, provides for free and open elections in a parliamentary democratic republic. The constitutional provisions governing administration of justice are similar to those in other former British possessions in that the judiciary is free from governmental interference.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[Kiribati Joint Implementation Plans for Climate Change and Disaster Risk Management 2014-2023 and 2019-2028](#). 2014-2023 document aims at identifying an integrated set of specific actions and measures to increase the country's resilience to climate change and associated risks in different sectors. It is designed to complement the National Disaster Risk Management Plan and the National Framework for Climate Change and Climate Change Adaptation. Specific goals include strengthening good governance, policies, strategies and legislation & increasing water and food security with integrated and sector-specific approaches and promoting healthy and resilient ecosystems.

[Kiribati Climate Change Policy \(2018\)](#). Principles include Safeguarding communities and the country as a whole from the adverse impacts of climate change and disasters and ensuring a safe and resilient Kiribati with a healthy environment for all.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Kiribati Climate Change Policy \(2018\)](#). Mainstreaming climate change and disaster risk reduction into development planning, policies, strategies, sector plans, and decision-making and budgeting processes at both national and local level. Emphasizing that adaptation, mitigation and disaster risk management are shared responsibilities that require coordinated, integrated, multi-partner, multi-sectoral and whole-of-government or whole-of-island approaches.

NET ZERO TARGET

2050 proposed/in discussion. 1st NDC: 21/09/2016. 13.7% reduction in GHG emissions by 2025 and 12.8% by 2030 compared to a BAU projection.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[The village](#) of Tebunginako in Abaiang Island has already had to relocate due to the effects of severe coastal erosion and saltwater intrusion.

[Kiribati is](#) amongst the most vulnerable nations to climate change on Earth. As an extremely isolated and very low-lying island nation, Kiribati faces considerable risk from climate variability and sea-level rise.

[Kiribati's president has](#) alerted the United Nations to the challenges the country faces from beach erosion, sea-level rise, and contamination of freshwater.

MALDIVES

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	5	0	6	540 542	0.0%	N/A

SUMMARY

The national climate framework of the Maldives consists of 4 laws, 5 policies and 6 targets. The [2021 Climate Emergency Act](#) introduces the legal structure and guidelines for addressing climate change issues and concerns. These include reporting, ensuring the sustainability of natural resources, overcoming negative impacts and allocating funds for renewable energy sources. The 2015 [Climate Change Policy Framework](#) aims to tackle climate change impacts in the short, medium and long term. The guiding principles include mainstreaming climate change policies, climate leadership and international commitments and partnerships. Policy goals include scaling up financial resources, increasing the use of climate friendly technology and integrating climate change into sector policies. The Maldives is a champion for climate action, particularly on the international stage, and is a member of the Alliance of Small Island States and the Climate Vulnerable Forum.

- Ranked 95 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The Republic of Maldives is a presidential representative republic. The executive branch consists of the President, Vice-President and Cabinet. The President and Vice-President are elected on the same ticket by popular vote for a five-year term with a two-term limit. The President serves as head of government and appoints a cabinet, subject to approval by Parliament. Parliament is unicameral and called the Majlis, with 85 representatives serving five- year terms elected from population-decided constituencies. The government or elected members of the Majlis may present a proposed legislation (called a bill) to the "floor" where it is then delegated to a legislative committee for debate and amendments.

CONSTITUTION

The Constitution is supreme law of the Maldives. The current Constitution of Maldives was ratified by President Maumoon Abdul Gayoom on 7 August 2008, and came into effect immediately, replacing and repealing the Constitution of 1998.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Climate Emergency Act 9/2021](#).

The Climate Emergency Act stipulates actions to address the climate emergency resulting from the swift acceleration of the severity of the repercussions from climate change. It introduces the legal structure and guidelines for addressing issues and concerns related to climate change, including reporting, ensuring the sustainability of natural resources, overcoming negative impacts and allocation of funds for renewable energy sources.

[Environmental Protection and Preservation Act of the Maldives](#) (2008). This short Act provides the basis for the powers of the Ministry of Planning, Human Resources and Environment to enact any regulations necessary for environmental protection. While the Act does not specify climate change it does provide the government with the ability to terminate any projects that are deemed to have an undesirable impact on the environment.

Policies:

[Climate Change Policy Framework \(2015\)](#). The Climate Change Policy Framework was released by the Ministry of Environment and Energy to provide Maldives with a strategic vision of policies necessary to tackle climate change impacts on the short, medium and long terms. The principles guiding the document are climate leadership, intergenerational equitability, mainstreaming climate change policies, international

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Support to climate change adaptation and mitigation in Maldives from GCCA+](#) (2009-2013): A total of 229 local council members (200% achievement of target) from 10 atolls were trained on climate change adaptation.

NET ZERO TARGET

2030 – in policy document. Updated NDC: “Maldives commits to reduce emissions by 26% (conditional) by 2030 compared to BAU and strives to achieve net-zero by 2030, with ambitious plans to increase our share of renewable energy in the energy mix through various initiatives.” Also commitment for net zero by 2030.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

In the near term, the islands of the Maldives are very vulnerable to inundation and gradual sea level rise will aggravate the existing problem of beach erosion. Rising sea levels also threaten the scarce fresh water resources of Maldives. Salt water intrusion is gradually encroaching into the islands' small pockets or 'lenses' of fresh water underground. The coral reefs surrounding the Maldives are at risk due to gradual warming of sea water (in addition to pollution from man-made sources). Given that these reefs support both the country's tourism and fisheries industries upon which the people depend almost exclusively, climate change is a profound threat to its economic base.

MARSHALL ISLANDS

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	5	0	11	59 194	0.0%	N/A

SUMMARY

The national climate framework of the Marshall Islands consists of 0 laws, 5 policies and 11 climate targets. Its [2050 Climate Strategy](#), passed in 2018, makes recommendations to achieve the country's 2050 net zero target and 100% renewable energy target by 2050. These include periodic revisions of GHG emission reduction goals and specific sectoral goals. The policy is to be periodically reviewed. The policy also promotes the establishment of a long-term financial strategy and seeks to decrease GHG emissions from cooking and lighting. Should sea levels continue to rise, the nation will face increasingly costly adaptation measures to protect essential infrastructure. The [Joint National Action Plan for Climate Change Adaptation & Disaster Risk Management 2014 - 2018](#) aimed to increase community resilience and ensure better emergency preparedness, an important measure due to the increasing strength of typhoons threatening the nation.

- Ranked 117 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Each of the twenty-four constituencies elect one or more representatives (senators) to the lower house of RMI's unicameral legislature, the Nitijela. The President, who is head of state as well as head of government, is elected by the 33 senators of the Nitijela. Legislative power lies with the Nitijela. The upper house of Parliament, called the Council of Iroij, is an advisory body comprising twelve paramount chiefs. The executive branch consists of the President and the Presidential Cabinet, which consists of ten ministers appointed by the President with the approval of the Nitijela. The twenty-four electoral districts into which the country is divided correspond to the inhabited islands and atolls.

CONSTITUTION

Operates under a mixed parliamentary-presidential system as set forth in its 1979 Constitution (last revised in 1995). The Constitution is the supreme law. The Constitution of the Marshall Islands mixes British and American constitutional concepts based mainly on Westminster system, with a legislative branch that originates the executive branch.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[2050 Climate Strategy \(2018\)](#). Number of recommendations to achieve the country's objectives of net zero emissions by 2050 and 100% renewable energy. These include periodic revision of GHG emissions reductions, specific goals such as in the waste sector, and a planning of new climate policies to adopt, such as a National Adaptation Plan by the end of 2019. This Strategy shall be periodically reviewed by the authorities over the period. Includes promotion of the establishment of a long-term finance strategy to implement this strategy & efforts to phase out the use of kerosene for lighting and strengthen existing institutional arrangements to reduce GHGs from cooking and lighting.

[National Energy Policy and Energy Action Plan](#). 40% cut in CO2 emissions by 2020 compared with a 2009 baseline.

[Joint National Action Plan for Climate Change Adaptation & Disaster Risk Management 2014-2018](#). The JNAP aims at 1) enhance coordination of action targeting disaster risk management and climate change adaptation, 2) public education and awareness, 3) better emergency preparedness at all levels, 4) improved and low-carbon energy security, 5) better local livelihoods and community resilience, and 6) integrated approach to development planning.

[The Marshall Islands approved its NDC Partnership Plan](#) in November 2018 and has been working on its implementation, including by significantly strengthening the internal coordination structure for climate and resiliency activities in a whole-of-government approach. With Partnership support, the government of the Marshall Islands has convened multiple climate change dialogues to ensure engagement and empowerment of all its citizens, including youth, in implementing climate actions. The Partnership Plan highlights key actions in mitigation and adaptation, led by the National Energy Office and the Office for Environmental Planning and Policy Coordination, and includes four additional outcome areas focusing on key cross-cutting issues that will strengthen and accelerate implementation.

NET ZERO TARGET

2050 - in policy document. [2050 Climate Strategy \(2018\)](#). Updated 2nd NDC: economy-wide NDC target under the Paris Agreement of reducing emissions at least 45% below 2010 levels by 2030.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Relief Web](#): climate change is a big threat to the Marshall Islands, with typhoons becoming stronger and sea levels rising. There is a high risk of permanent flooding to some atolls. Should existing sea level rise trends continue, the country will confront a series of increasingly costly adaptation choices to protect essential infrastructure, such as schools, hospitals, and government buildings. Ranked 172 on Global Climate Risk Index.

MONGOLIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
8	7	0	22	3.278 m	0.14 %	N/A

SUMMARY

Mongolia's national climate framework consists of 8 laws, 7 policies and 22 climate targets. The 2012 [Law on Air Quality](#) aims to regulate actions related to pollution reduction and monitoring of emissions. The law also established that the National Committee for Climate Change would provide guidance on the implementation of the UNFCCC. Mongolia also has a [Green Development Policy](#), passed in 2014, which discusses key indicators for measuring progress, such as GHG emissions, levels of recycling and green employment. Mongolia does not have a target for net zero.

- Ranked 99 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Mongolia has a sole legislative body, the State Great Hural. The legislature is unicameral and consists of 76 members, 48 elected by a mixed member proportional system representing single member constituencies, and 28 elected by a proportional representation system. Members serve a four-year term, and the State Great Hural can override any presidential veto with a two-thirds majority vote. The President, the government (usually the Prime Minister or a Deputy Prime Minister, or Ministers who are members of Parliament) and individual members can propose legislation.

CONSTITUTION

Adopted on 13 January 1992, put into force on 12 February, and amended in 1999, 2000 and 2019. The new constitution established a representative democracy in Mongolia, providing for freedom of religion, rights, travel, expression, unalienable rights, government setup, election cycle, and other matters. It was written after the Mongolian Revolution of 1990 and dissolved the People's Republic of Mongolia.

CLIMATE POLICIES AT NATIONAL LEVEL

[Law on Air Quality \(2012\)](#). The purpose of this law is to regulate actions related to the protection of ambient air, prevention of air pollution, and reduction and monitoring of emissions of air pollutants. If an international treaty to which Mongolia is a party is inconsistent with this law then the provisions of the international treaty shall prevail. Approval and management of the implementation of the National Programme for Air Protection and Climate Change. It also establishes that the National Committee for Climate Change shall organise, manage, and provide guidance to the implementation of the UNFCCC, focusing on climate change adaptation and mitigation of ecological vulnerability and climate change impacts at the national level.

[Law on Soil Protection and Prevention of Desertification \(2012\)](#). The law provides guidance to facilitate a safe and healthy environment for the population, and to prevent soil damage and lower soil fertility from overgrazing and desertification, and systems to prevent soil erosion.

Policies:

[Action Programme for the Government of Mongolia 2016-2020](#). Paragraph 4.1.5 states that the government shall elaborate and implement strategies on diminishing and adapting to the effects of climate change, establish an environment and climate fund and strengthen national capacity.

[Green Development Policy \(GDP\) \(2014\)](#). Key indicators for measuring progress will include the savings of natural resources derived from production and services, level of recycling, green employment and green procurement growth, reduction of usage of energy, water, GHG emissions and ecological footprint per unit of production.

NET ZERO TARGET

No target. Updated NDC: "Mongolia intends to achieve a target to mitigate its greenhouse gas emissions by 22.7 percent by 2030, compared to the business as usual scenario, excluding LULUCF. In addition, if conditional mitigation measures such as the carbon capture and storage and waste-to-energy technology are implemented, then Mongolia could achieve a 27.2% reduction in total national GHG emissions."

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Climate Risk Country Profile](#): Recent climate changes have led to chronic drought, and increased exposure to secondary impacts such as dust storms. Mongolia faces rates of warming far higher than the global average. On the highest future emissions pathway

average warming could exceed 5°C by the end of the century. The intensity of extreme climate-driven hazards including heat wave, drought, and river flood, is expected to increase. Mongolia's unique ecosystems are likely to come under pressure from long-term warming and drying processes, with shifts in species ranges likely, and potential loss of forest cover and associated species. Changes in climatic conditions are projected to place further downward pressure on yields of current agricultural crops, particularly wheat, threatening Mongolia's food security. Focus is needed on the interplay between climate changes and current development trends in Mongolia, unplanned development in flood exposed areas and air pollution issues could interact with climate changes to enhance health risks and inequalities.

NEPAL

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	14	1	33	29.14m	0.13%	Almost Sufficient

SUMMARY

Nepal's national climate framework consists of 3 laws, 14 policies and 33 climate targets. The [Environment Protection Act 2019](#) and the [Forest Act 2019](#) were approved following a lawsuit and decision from the Nepal Supreme Court mandating the government to take legislative action to meet its commitments to the UNFCCC and the Paris Agreement. The Environment Protection Act 2019 includes articles which mandate the state to identify sectors ideal for mitigation strategies and creates an Environment Protection Fund, which includes responsibilities for the prevention and control of pollution and the management of climate change. The 2020 [National Climate Change Policy](#) more effectively applies constitutional provisions guaranteeing the right of every citizen to live in a clean and healthy environment. The policy also enhances Nepal's climate change adaptation capacity and promotes a green economy through low carbon development.

- Ranked 142 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The Constitution of Nepal (adopted in 2015 and last revised in 2016) states the form of government for Nepal should be multi-party, competitive, federal, democratic, republican, parliamentary and based on pluralism. The Federal Legislature consists of two houses: the House of Representatives (275 members) and the National Assembly (59 members). 165 members of the House of Representatives are elected by the first past the post electoral system, one member for every election constituency. 110 members are elected through a proportional electoral system whereby voters vote for political parties, with the whole country considered as a single constituency. There are reserved seats in the National Assembly for women, Dalits, people with disabilities and minorities.

CONSTITUTION

Nepal adopted the 2015 Constitution (last revised in 2016) which replaced the 2007 interim Constitution. Its institutions were put in place in 2010 and 2018 through a series of direct and indirect elections in all governing levels. The 2015 constitution restructured Nepal into a federal republic. It resolved to build an egalitarian society and eliminate discrimination based on class, caste, region, language, religion and gender.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[The Environment Protection Act 2019](#). This law was approved following the Shrestha v. Office of the Prime Minister et al. case mandating Nepal to take legislative action to be able to meet its commitments to the Paris Agreement. Article 25 mandates the state to identify mitigation-prone sectors and set national targets. Article 31 creates the Environment Protection Fund responsible for the protection of the environment, prevention and control of pollution, management of climate change and protection of the national heritages.

Policies:

[National Climate Change Policy](#). Published in 2020, the National Climate Change Policy replaces the previous 2011 policy, in part to more effectively give effect to Constitutional provisions guaranteeing the right of every citizen to live in a clean and healthy environment. Includes: to enhance climate change adaptation capacity and to promote a green economy through low carbon development.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

The government has 3 levels at the federal regional and local levels. Schedule 8 of the constitution (last revised 2016) contains the powers at the local levels and includes local development, drinking water, alternative energy, disaster management and conservation amongst others.

Laws:

[The Environment Protection Act 2019](#). Article 23 mandates the relevant ministry to periodically provide information to local communities about the impacts of climate change. Article 24 charges authorities at national and local levels to adopt adaptation plans.

[National Framework for Local Adaptation Plans for Action \(LAPAs\)](#). Climate change sensitisation also supports in identifying institutions that will implement and/or assist the implementation of LAPA or adaptation programmes. The likely institutions may include District Energy and Environment Sections or Units, District Disaster Risk Reduction Committees, village level Monitoring and Evaluation Committees etc.

NET ZERO TARGET

2045 – proposed/in discussion.

CLIMATE ACTION TRACKER RATING

Almost sufficient. [From the CAT](#): While Nepal's updated NDC is a step in the right direction, Nepal needs to strengthen its conditional target further, with international support. Nepal's current policies are 1.5°C compatible when compared to its fair-share contribution. The "1.5°C Paris Agreement compatible" rating indicates that Nepal's climate policies and action are consistent with limiting warming to 1.5°C. Nepal's climate policies and action do not require other countries to make comparably deeper reductions. Nepal's conditional target is "Critically insufficient". The "Critically insufficient" rating indicates that Nepal's internationally supported target in 2030 reflects minimal to no action and is not at all consistent with the Paris Agreement's 1.5°C temperature limit. In Nepal, land use and forests are a significant emissions sink.

ISSUES & CHALLENGES

[Nepal is highly](#) vulnerable to climate change impacts and recent studies by the Asian Development Bank suggested Nepal faces losing 2.2% of annual GDP due to climate change by 2050. Nepal's varied topography and social vulnerability make the country particularly susceptible to geological and climate-related disasters. Weakness in effective response mechanisms and strategies for dealing with natural hazards has historically exacerbated this vulnerability. An increase in soil erosion, landslides, flash floods, and droughts has been reported in recent years across the country.

PALAU

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	5	0	6	18 092	0.0%	N/A

SUMMARY

Palau's national climate framework consists of 3 laws, 5 policies and 6 targets. The 2015 [Palau Climate Change Policy](#) establishes mitigation and adaptation actions, as well as policy frameworks for managing GHG emissions, including protecting carbon sinks, and disaster risk reduction and management. Other objectives include increasing energy efficiency. Sea level rise and the associated salination of agricultural soil and freshwater sources make Palau highly vulnerable to the effects of climate change. An increase in typhoon and severe storm frequency associated with climate change poses a significant threat.

- Ranked 50 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Palau is a democratic republic. The President of Palau is both head of state and head of government. Executive power is exercised by the government, while legislative power is vested in both the government and the Palau National Congress. Palau has a bicameral legislature, the Palau National Congress (Olbiil era Kelulau), consisting of the House of Delegates and the Senate of Palau. The House of Delegates has 16 members, each serving four-year terms in single-seat constituencies. The Senate has 13 members, also serving four-year terms in multi-seat constituencies. In the last elections, held in 2020, only non-partisans were elected; no political parties exist.

CONSTITUTION

Palau adopted a Constitution in 1981 which was last revised in 1992. The Constitution provides a general guarantee of equality regardless of race, gender, religion, tribe/clan,

disability and social status. It provides for a president who is chief executive of the national government, and establishes a cabinet as well as a Council of Chiefs composed of a traditional Chief from each state which advises the president on matters concerning traditional laws, customs and their relationship to the Constitution and laws of Palau.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Energy Act \(2016\)](#). The document notably charges the Energy Administration to report information related to climate impacts in the energy sector.

Policies:

[Palau Climate Change Policy \(2015\)](#). Establishes Palau's National Appropriate Mitigation Actions (NAMA) and National Adaptation Plan (NAP) as well as the institutional and policy frameworks for: (a) climate change mitigation via management of greenhouse gas emissions including carbon sinks; and (b) climate change adaptation and risk reduction and management.

[Actions For Palau's Future - Medium-Term Development Strategy 2009-2014](#). It recognises climate change as one of the major threats facing the country. The Strategy notably charges the state to 1) address previously unforeseen risks including climate change and bio-security, 2) complete, and/or approve existing drafts of laws e.g. climate change, energy conservation and bio-security, and 3) improve capacity for environmental management, including on climate risks, through awareness campaigns.

[Strategic Action Plan Energy Sector \(2009\)](#). 30% reduction in energy consumption by 2020. 20% renewables in energy mix by 2020.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[National Disaster Risk Management Framework 2010](#). At the community level, disaster risk reduction programs and activities are to be developed and incorporated into programs that address community development and coping mechanisms in times of disasters. Relevant traditional knowledge and practices are to be included in all national, state and community disaster risk reduction plans.

NET ZERO TARGET

2050 – proposed/in discussion. 1st NDC: 22/04/2016. 22% reduction in GHG emissions from energy sector 2025 compared to 2005.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[UNDP Climate Change Adaptation](#): Low lying areas may be affected by sea level rise. Inundation of low-lying atolls may reduce the agricultural capacity of Palau due to soil salination. Although rainfall in Palau is plentiful, increasing atmospheric temperatures and saltwater inundation as a result of climate change may threaten freshwater supplies. Palau is subject to typhoons and severe storms which have caused damage to local infrastructure and fisheries. An increase in storm-frequency associated with climate change could therefore pose a significant threat to Palau in the future. Climate change-induced damage to the environment such as coral bleaching could adversely affect the tourism industry. Other economic bases include subsistence agriculture and fishing, both contributing to Palau's GDP. Increases in ocean temperatures may alter the migratory patterns of fish populations in Palau's waters, also adversely affecting this industry. The government is a major employer and relies heavily on external funding.

PAPUA NEW GUINEA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	10	0	7	8.947 m	0.13%	N/A

SUMMARY

Papua New Guinea's national climate framework consists of 3 laws, 10 policies and 7 targets. In 2016, Papua New Guinea passed the [United Nations Paris Agreement \(Implementation\) Act](#). Included in the act are principles for sharing revenues generated from the regulation of carbon emission and sequestration. The act also establishes a consultation process on the consequences of GHG emissions on local development, and defines the legal framework needed for GHG emission regulations. The [2014 National Climate Change Compatible Development Management Policy](#) aims to stimulate climate resilient and carbon neutral development through improved disaster risk management, more sustainable forestry and agricultural practices and developing and using clean technologies. In its [enhanced NDC](#), Papua New Guinea aims for 50% carbon neutrality by 2030, and to be entirely carbon neutral by 2050.

- Ranked 155 on Human Development Index.

CONSTITUTIONAL SYSTEM

Papua New Guinea is a Commonwealth realm with HM Elizabeth II as Queen of Papua New Guinea. The monarch is represented by the Governor-General of Papua New Guinea. The Prime Minister heads the cabinet, which consists of 31 members of Parliament from the ruling coalition, which make up the government. The unicameral National Parliament has 111 seats, of which 22 are occupied by the governors of the 22 provinces and the National Capital District. Candidates for members of parliament are voted upon when the prime minister asks the governor-general to call a national election, a maximum of five years after the previous national election.

CONSTITUTION

The Constitution (last revised 2016) provides for a parliament consisting of a single-chamber legislature. It calls for: "(1) wise use to be made of our natural resources and the environment in and on the land or seabed, in the sea, under the land, and in the air, in the interests of our development and in trust for future generations; and (2) the conservation and replenishment, for the benefit of ourselves and posterity, of the environment and its sacred, scenic, and historical qualities; and (3) all necessary steps to be taken to give adequate protection to our valued birds, animals, fish, insects, plants and trees.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[United Nations Paris Agreement \(Implementation\) Act 2016](#). This Act addresses climate change issues in Papua New Guinea and implements the country's obligations under the Paris Agreement. The document is declared a matter of national interest. It establishes the authority responsible for 1) determining the benefits and levies of the Organic Law in respect of GHG emissions and carbon capture and storage, 2) determining the rates, management, sharing arrangements and application of related benefits and levies, and 3) establishing and administering trust funds of Section 98(3) of the Organic Law.

Policies:

[National REDD+ Strategy \(2017-2027\)](#). The strategy is a key part of the country's response to climate change and of the Green Growth Development agenda as per the National Strategy for Responsible and Sustainable Development. The NRS aims to strengthen sustainability of Papua New Guinea's forest while helping to improve land use planning and management to ensure forests and environments are protected. The ultimate aim is to reduce greenhouse gas emissions and reduce the vulnerability of communities to climate change.

[National Climate Change Compatible Development Management Policy \(2014\)](#). Aims at stimulating climate-compatible development ("climate resilient and carbon neutral") through improved disaster-risk management, mitigation including from sustainable forestry and agricultural practices, and the fostering of clean technologies. Carbon neutrality by 2050.

NET ZERO TARGET

2050 – proposed/in discussion. [2nd NDC](#): 50 percent carbon neutral by 2030, and be entirely carbon neutral by 2050.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Rising sea levels](#) and destructive weather events flood coastal and inland regions. Extreme weather events will lead to the loss of the country's wetlands, destroy the country's fisheries, pollute clean water sources and heighten the risk, and spread, of water-borne diseases. Increasing temperatures, coupled with diminishing fresh water sources and persistent droughts, hamper agricultural processes at the cornerstone of the Papua New Guinean economy and the population's livelihood.

Ranked 155 on Human Development Index.

PHILIPPINES

SUMMARY

The national climate framework of the Philippines consists of 12 laws, 21 policies and 12 targets. There have also been 4 climate-related litigation cases. In 2009, The Philippines passed The [Climate Change Act and its Implementing Rules and Regulations](#) created the Climate Change Commission. Its purpose is to build a climate-resilient and a climate-smart Philippines with highly adaptive communities by developing and mainstreaming evidence-based climate adaptation and mitigation policies through coordination amongst key stakeholders. The [Philippine Green Jobs Act](#) (2015) is currently developing the standards for green jobs and establishing an accreditation and certification system that incentivises businesses that support green jobs and a just transition to a green economy. In 2020, the Minister for Energy declared a [moratorium](#) on endorsements for greenfield coal power plants. The [CAT](#) assess the Philippines as not on track to achieve its Paris Agreement conditional 2030 target as emissions are increasing. Furthermore, it highlights recent developments in the energy sector as contradictory to announcements and policies. The CAT has not yet released its updated assessment of the Philippines. However, the Philippines has stated that whilst their compliance is dependent on foreign support, it is optimistic in pursuing its NDC goals and obtaining the financial and technological backing from developed parties as committed under the Paris Agreement.

- Ranked 107 on the Human Development Index.

CONSTITUTIONAL SYSTEM

- The Philippines is both a republican and democratic state. Sovereignty resides in the people and all government authority emanates from them.
- The legal system of the Philippines [is a mixture of Roman \(Civil law\) and Anglo-American \(Common law\) systems](#), customary usage, and Islamic Law. Civil law operates in areas such as family relations, property, succession, contract, and criminal law while statutes and principles of common law origin are evident in such areas as constitutional law, procedure, corporation law, taxation, insurance, labor relations, banking and currency.

- It has a presidential form of government.
- The Executive branch carries out and enforces laws. It is composed mainly of the President and his cabinet members. They act as the leader of the country and functions as the Head of State and Commander-in-Chief of all armed forces of the Philippines. The President serves a six-year term and cannot be re-elected.
- The Legislative branch is the law-making body. It is bicameral and consists of the Lower House and the Upper House. The Upper House or the Senate is composed of 24 Senators, who are elected at large by qualified voters of the Philippines. The Senators serve for six years and may only be elected twice successively. The Lower House is composed of district representatives who are voted locally and party-list representatives who are elected at large. They serve for three years with a three-term limit.

CONSTITUTION

The basic charter of the Philippines is presently the 1987 Constitution. It dictates the framework of government and assigns powers to the different branches. The Philippine Constitution is classified as rigid and may only be revised or amended in ways provided therein. The Philippine Constitution mandates that all legislative districts be represented in Congress and that the party-list representatives shall constitute 20% of the total number of representatives including those under the party-list.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Philippine Green Jobs Act no 10771/2016.](#)

The Philippines is currently developing the standards for green jobs and establishing an accreditation and certification system that incentivizes businesses that support green jobs and just transition to a green economy.

[The Climate Change Act \(RA 9729\), and its Implementing Rules and Regulations.](#)

The Climate Change Act created the Climate Change Commission (CCC) in 2009. Its purpose is to build a climate-resilient and a climate-smart Philippines with highly adaptive communities by taking lead in the development and mainstreaming of evidence-based climate adaptation and mitigation policies through optimum coordination among key stakeholders. The CCC promulgated the National Framework Strategy on Climate Change (NFSCC) which was later translated into the National Climate Change Action Plan (NCCAP) which sets the directional plan for the government on its actions on 7 thematic areas: food security, water sufficiency, ecological and environmental stability, human security, climate-smart industries and services, sustainable energy, and knowledge and capacity development.

Policies:

[Moratorium on endorsements for greenfield coal power plants \(2020\).](#)

[Enhanced National Greening Program \(2019\).](#) The programme gives effect to Executive Orders No. 23 and 26 (Declaring an Inter-departmental Convergence Initiative for a National Greening Program) of 2011, which aim to address climate change, ensure the

sustainable management of natural resources, and reduce poverty through forest management practices.

Philippine [National Climate Risk Management Framework of 2019](#). It aims at informing the administration's work with regard to climate-related risk in a wide range of sectors. It sets a vision for a science-based planning system encompassing a "strong risk" database as well as other information systems available to central and local governments.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

In terms of Article X of the Phillipines Constitution of 1987 Each local government unit shall have the power to create its own sources of revenues and to levy taxes, fees, and charges subject to such guidelines and limitations as the Congress may provide, consistent with the basic policy of local autonomy. Such taxes, fees, and charges shall accrue exclusively to the local governments. The organic act of autonomous region shall provide for legislative powers over the creation of sources of revenue, ancestral domain and natural resources, regional urban and rural planning development and such other matters as may be authorised by law.

Laws:

[The People's Survival Fund Act \(2012\)](#).

The law provides long-term financing to climate adaptation projects. It received its P1 Billion replenishable fund allocation under the General Appropriations Act (GAA) in 2015. The objective is to provide an effective combination of engineering and non-engineering interventions that can directly address the area's climate risks and capacity-building programs designed to empower the community and ensure project sustainability.

[Philippine Disaster Reduction and Management Act \(2010\)](#).

The law promotes the development of capacities in disaster management at the individual, organizational and institutional levels. It recognizes the local risk patterns and trends and encourages the participation of the different sectors in the community. It also mandates the establishment of a Disaster Risk Reduction and Management Office (DRRMO) in every province, city, municipality, and a Barangay Disaster Risk Reduction and Management Committee (BDRRMC) in every barangay. A number of local government units across the country have passed ordinances banning or regulating single-use plastics. Among the most prominent proponents are Quezon City and the City of San Fernando in Pampanga, which has been cited as the model city in [Zero Waste management](#).

NET ZERO TARGET

No target. 1st NDC: 15/04/2021. ["The Philippines](#) commits to a projected GHG emissions reduction and avoidance of 75%, of which 2.71% is unconditional and 72.29% is conditional, representing the country's ambition for GHG mitigation for the period 2020 to 2030 for the sectors of agriculture, wastes, industry, transport, and energy."

CLIMATE ACTION TRACKER RATING

2°C COMPATIBLE. Waiting for the updated CAT assessment so this may change. The Philippines is further advancing the implementation of its ambitious Paris Agreement target, as the first country in the Southeast Asian region to set a moratorium on new coal, and implementing several measures to support renewables. These actions would halt emissions growth and potentially curb the Philippines' emissions by up to 35% below current policy projections in 2030.

From the Climate Action Tracker:

We rate the Philippines' conditional 2030 Paris Agreement 2030 target "2°C compatible", as it would require emissions to decline significantly. Philippines is not yet on track to achieve this target, as emissions increase. Recent developments in the energy sector remain contradictory. The draft PEP does not include the moratorium on new coal-fired power plants announced in October, and aims to introduce inflexible nuclear power to the power grid. These developments are not in line with President Duterte's speech in July 2019 when he stated the need to "fast-track the development of renewable energy sources and to reduce dependence on traditional energy sources such as coal."

Response from Philippines: "As regard the CVF's finding that the Philippines is not on track in meeting its 2030 target, we submit the following:

The Philippines has set its goal to achieve a 75% reduction in greenhouse gas emissions by 2030. Broken down as follows – 2.71% unconditional, which shall be implemented mainly through domestic resources and 72.79% which is conditional on the support of climate finance, technologies, and capacity development provided by the progressive countries. The compliance of the Philippines is admittedly dependent on foreign support, nevertheless, it is optimistic in pursuing its goal and obtaining the much-needed financial and technological backing from developed parties as committed under the Paris Agreement."

ISSUES & CHALLENGES

Several typhoons and COVID-19 have put a significant strain on the country and make economic rescue a national priority.

SAMOA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	14	0	18	198 410	0.0%	N/A

SUMMARY

Samoa's national climate framework consists of 4 laws, 14 policies and 18 climate targets. The [Samoa Climate Change Policy 2020-2030](#) provides the framework for coordination on climate change adaptation and mitigation between different institutions and levels of government, as well as establishing effective responses to climate change impacts. The [Samoa 2040](#) policy seeks to increase resilience to natural disasters, public health emergencies and climate change, as well as advance climate-smart technologies in farming and improve the resilience of infrastructure. According to the [Climate Change Knowledge Portal](#), approximately 70% of Samoa's population and infrastructure are located in low-lying coastal areas which are vulnerable to sea level rise and coastal erosion.

- Ranked 111 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The unicameral legislature (the Fono) consists of 51 members serving 5-year terms. Forty-nine are matai title-holders elected from territorial districts by Samoans; the other two are chosen by non-Samoans with no chiefly affiliation on separate electoral rolls. At least, 10% of the MPs are women. Universal suffrage was adopted in 1990, but only chiefs (matai) may stand for election to the Samoan seats. There are more than 25,000 matais in the country, about 5% of whom are women. The prime minister, chosen by a majority in the Fono, is appointed by the head of state to form a government. The prime minister's choices for the 12 cabinet positions are appointed by the head of state, subject to the continuing confidence of the Fono.

CONSTITUTION

The 1960 constitution, which formally came into force with independence from New Zealand in 1962, builds on the British pattern of parliamentary democracy, modified to take account of Samoan customs.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Forestry Management Act 2011](#) Art. 32 on climate change and carbon trading notably states that regulations made under this Act shall be taken to 1) prepare inventories of Samoa's forestry resources, and effectively mapping or recording such resources and other measures. [Electricity Act 2010](#). Two of the objectives of this Act are to promote the prevailing national policies on combating climate change.

Policies:

[Samoa 2040 \(2021\)](#). This document sets the government's vision for socioeconomic development until 2040. It notably seeks to 1) focus investments on increasing resilience to external shocks, "including natural disasters, public health emergencies, and the effects of climate change", 2) advance climate-smart technologies in farming, and 3) improve the resilience of the infrastructure to adverse effects of climate change.

[Samoa Climate Change Policy 2020-2030](#). Provides the foundations of actions to guide coherence coordination on climate change adaptation and mitigation activities between different institutions and levels of government and supports Samoa to meet its international obligations. The policy targets primarily internal actions and encourages synergies. Objectives include: establish an effective Governance framework and support systems in place for effective response to climate change impacts.

NET ZERO TARGET

2050 proposed/in discussion. 2nd NDC: Samoa aims to reduce overall GHG emissions by 26 percent in 2030 compared to 2007 levels (or by 91 Gg CO₂ e compared to the new reference year once Samoa's GHG emissions inventory has been updated).

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Approximately 70% of Samoa's population and infrastructure are located in low-lying coastal areas. Projected sea level rise could exacerbate coastal erosion, loss of land and property and dislocation of the island inhabitants. [The extreme events](#) of tropical cyclones Ofa (1990) and Val (1991) caused damage with cost estimates of approximately four times the gross domestic product (GDP) of Samoa.

SRI LANKA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	13	0	33	21.92 m	0.08%	N/A

SUMMARY

Sri Lanka's national climate framework consists of 4 laws, 13 policies and 33 targets. The [National Climate Change Policy of Sri Lanka](#) was passed in 2012 and aims to foster adaptation and mitigation efforts within the framework of sustainable development. Its core objectives include climate change communication to the population which includes highlighting its vulnerability, mitigating GHG emissions whilst pursuing sustainable development and promoting sustainable consumption and production. Sri Lanka also passed a [National Adaptation Plan for Climate Change Impact 2016-2025](#), which seeks to strengthen cooperation between stakeholders, mobilise resources, develop technology and build awareness and capacity to increase the resilience of vulnerable communities. Sri Lanka set a target of carbon neutrality by 2050 in its updated NDC.

- Ranked 72 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Sri Lanka is a democratic republic and a unitary state which is governed by a semi-presidential system, with a mixture of a presidential system and a parliamentary system. The President of Sri Lanka is the head of state; the commander in chief of the armed forces; head of government, and is popularly elected for a five-year term. The president heads the cabinet and appoints ministers from elected members of parliament. The Parliament of Sri Lanka is a unicameral 225-member legislature with 196 members elected in multi-seat constituencies and 29 elected by proportional representation.

CONSTITUTION

Most provisions of the Constitution (last revised 2020) can be amended by a two-thirds majority in parliament. The amendment of certain basic features such as the clauses on language, religion, and reference to Sri Lanka as a unitary state require both a two-thirds

majority and approval in a nationwide referendum. It is Sri Lanka's second republican constitution, replacing the Sri Lankan Constitution of 1972.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National Action Plan for Haritha Lanka Programme \(2019\)](#). 20% increase in renewable energy percentage of national grid, from 4.8% baseline by 2020 against a 2008 baseline.

[Coastal Zone and Coastal Resource Management Plan 2018](#). It mandates the country to combat erosion notably by adopting climate compatible technologies and designs for fisheries, tourism and other economic activities located in coastal zones. Proposed actions include establishing a database on climate change features relevant to coastal zone management in collaboration with relevant state organisations & analyse impacts of climate change and establish systems for timely adaptive and mitigatory action.

[National Adaptation Plan for Climate change impacts 2016-2025](#). The Plan provides the opportunity for all the stakeholders for developing policies, strengthening cooperation, institutional setup, resources mobilization, technology development and transfer, awareness and capacity building to increase resilience of vulnerable communities.

[Sri Lanka Energy Sector Development Plan for a Knowledge-based Economy 2015-2025](#). Reduce the carbon footprint of the energy sector by 5% by 2025.

[National Climate Change Policy of Sri Lanka \(2012\)](#). It aims at fostering adaptation and mitigation efforts within the framework of sustainable development. Its core objectives include 1) Sensitize and make aware the communities periodically on the country's vulnerability to climate change, 2) Take adaptive measures to avoid/minimize adverse impacts of climate change to the people, their livelihoods and ecosystems.

NET ZERO TARGET

2050 – in policy document. Updated NDC: carbon neutrality by 2050.

[National Adaptation Plan for Climate change impacts 2016-2025](#). Identifies agriculture, fisheries, water, human health, coastal and marine, ecosystems and biodiversity, infrastructure and human settlements as vulnerable sectors to the adverse effects of climate change.

TIMOR-LESTE

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	2	0	0	1.318 m	N/A	N/A

SUMMARY

Timor-Leste's national climate framework consists of 4 laws, 2 policies and 0 climate targets. The Timor-Leste National Climate Change Centre collects data on climate change and encourages technological innovations to address adaptation and mitigation. This centre was further developed as a result of the [Program of the Fifth Constitutional Government 2015-17 Legislature](#). A 2013 [decree](#) established a National Directorate for International Environmental Issues for Climate Change. A 2012 [Decree Establishing the Environmental Basic Law](#) stated that climate change mitigation and adaptation measures should be implemented as well as GHG emissions reduction measures. Timor-Leste has a [high rate of deforestation](#) and degradation of natural resources. With a high dependence on subsistence agriculture, climate change threatens to affect vulnerable rural communities in the nation.

- Ranked 141 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Politics of Timor-Leste takes place in a framework of a unitary semi-presidential representative democratic republic, whereby the Prime Minister of Timor-Leste is the head of government and the President of Timor-Leste exercises the functions of head of state. Timor-Leste has a multi-party system. Executive power is exercised by the president and the government. Legislative power is vested in both the government and the National Parliament. The 2002 Constitution was modelled on that of Portugal, though the president has less powers than the Portuguese counterpart. The country is still in the process of building its administration and governmental institutions.

The unicameral Timorese National Parliament (Parlamento Nacional) has 65 members elected by proportional representation for a five-year term. The number of seats can vary from a minimum of 52 to a maximum of 65, though it had 88 members during its first term which also exceptionally lasted six years – from 2001 to 2007 – this was because the Constitution provided that the 88-member Constitutional Assembly would become the first parliament after the Constitution came into force.

CONSTITUTION

The Constitution came into force in 2002 and was modeled after that of Portugal. It provides for a president of the Republic who is head of state and supreme commander of the armed forces. Their term of office is five years and can only be renewed once. The Constitution provides for a Council of State, which advises the president, and a unicameral national parliament. The Constitution states that Timor-Leste is democratic, sovereign, independent and unitary state.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Decree-Law No. 01/2013 establishing the structure of the Ministry of Trade, Industry and Environment](#). Establishes and specifies the responsibilities of the National Directorate for International Environmental Issues for Climate Change.

[Decree-Law No. 26/2012 establishing the Environmental Basic Law](#). Provides that the State should implement the necessary adaptation and mitigation measures to climate change to promote the reduction of greenhouse gas emissions to the atmosphere, their removal by sinks and the minimization of the negative effects of climate change impacts on biophysical systems.

Policies:

[Program of the Fifth Constitutional Government: 2015-17 Legislature](#). States that the Government will continue developing the National Climate Change Centre to conduct research and observation on climate change, collect data on climate change impacts and encourage technology innovation to address adaptation and mitigation.

[Timor-Leste Strategic Development Plan, 2011-2030](#). Has multiple references to climate change adaptation, mitigation and research, renewable energy and carbon credits.

NET ZERO TARGET

2050 proposed/in discussion. 1st NDC: 16/08/2017 Reduce emissions in sectors of agriculture, energy, land-use change and forestry and waste. Does not have a target for emissions reduction.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Timor-Leste is a country](#) with high dependence on subsistence agriculture, mountainous topography, food insecurity, and high rate of deforestation and degradation of natural resources. Unpredictable climate events that are intensified with effects of climate change, affect the coping mechanisms of rural communities in the country.

TUVALU

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
4	6	0	5	11 792	0.0%	N/A

SUMMARY

Tuvalu's national climate framework consists of 4 laws, 6 policies and 5 targets. The 2016 [Climate Change and Disaster Survival Fund Act](#) was set up to provide immediate and vital services to the population of Tuvalu to combat climate change and natural disasters, and allows the government to respond to climate change impacts and natural disasters in an effective manner. The act also established a government committee to create a national strategy for climate change and natural disasters, as well as review requests for assistance. Detailed measures and projects are included in the [National Strategic Action Plan for Climate Change Adaptation and Disaster Risk Management 2012-2016](#), such as developing nurseries for heat and salt tolerant species and establishing building codes for climate resilient housing. This policy is the implementation plan for the 2012 [Te Kaniva: Tuvalu National Climate Change Policy](#) which includes goals such as strengthening adaptation, implementing disaster risk reduction programmes and researching site-specific impacts of climate change.

- Human Development Index score not calculated.

CONSTITUTIONAL SYSTEM

Tuvalu is a parliamentary representative democratic monarchy, with HM Queen Elizabeth II as head of state, represented by a Governor General, and the Prime Minister as head of government. As there are no political parties, Tuvalu is a de facto non-partisan democracy. The unicameral parliament follows the Westminster system of representative democracy, and has 15 members, each elected for a four-year term. The Prime Minister and Speaker of the Parliament are elected by these 15 members by secret ballot. Two members of parliament are elected by each of the seven larger islands (Funafuti, Nanumanga, Nanumea, Niutao, Nui, Nukufetau, Vaitupu) and one member of parliament is elected by Nukulaelae. The smallest island of Niulakita is represented by the members elected for Niutao. Up to half of the members of parliament, including the Prime Minister may be appointed to cabinet. The legal system combines acts voted into law by the Parliament (and associated statutory instruments), acts passed by the Parliament of the United Kingdom during the period in which Tuvalu was a British protectorate (1892-1916) or a British colony (1916-1978), common law and customary law.

CONSTITUTION

The current Constitution was enacted in 1986 and amends a previous constitution adopted in 1978 upon independence. It was last revised in 2010. [National Strategic Action Plan for Climate Change Adaptation and Disaster Risk Management 2012-2016](#). Actions include reviewing and amending Tuvalu's constitution and relevant legislation to address Tuvalu's sovereignty of its EEZ (exclusive economic zone) regardless of projected impacts of climate change.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Climate Change and Disaster Survival Fund Act 2015 \(No. 11 of 2016\)](#). This law establishes a Climate Change and Disaster Survival Fund to Provide immediate vital services to the people of Tuvalu in combating the devastating impact of climate change and natural disasters, and allows the Government and the people of Tuvalu to respond to future climate change impacts and natural disasters in a coordinated, effective and timely manner. It also establishes a government committee to review requests for assistance and create a national strategy for climate change and natural disasters.

[Energy Efficiency Act 2016](#). The Energy Efficiency Act promotes energy efficiency, energy conservation and gives effects to certain obligations that Tuvalu has under the Climate Change Conventions and relations conventions.

Policies:

[National Strategic Action Plan for Climate Change Adaptation and Disaster Risk Management 2012-2016](#). The actions include:

develop nurseries to nurture selected food crop and tree species that are salt and heat tolerant & establish building code for climate resilient housing.

[Te Kaniva: Tuvalu National Climate Change Policy \(2012\)](#). It defines seven thematic goals, each containing detailed strategies and subsequent expected outcomes. The goals include strengthening adaptation actions to address current and future vulnerabilities and improving understanding and application of climate change data, information and site specific impacts assessment to inform adaptation and disaster risk reduction programmes.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

2008 [Environmental Protection Act \(Revised edition, CAP. 30.25\)](#). The Act includes a short section on 'Responses to Climate Change', which states that each Kaupule (the island council or executive branch of the Falekaupule, the traditional assembly of elders present on each island of Tuvalu), in conjunction with other Departments and relevant international agencies, and through the involvement of the community, shall formulate, apply and implement strategies and programmes to: - Raise the level of understanding throughout the

world about the implications of climate change, and activities which contribute to climate change, on Tuvalu and the future of its people;

- Promote understanding about the causes and implications of climate change;
- Address the effects of climate change within Tuvalu on its water resources, coastal areas, lands and land usage, food security, biodiversity, fisheries, economic welfare, public infrastructure and its vulnerability to natural disasters;
- Implement programmes and facilitate projects to protect its water resources, coastal areas, mangroves, lands, biodiversity, fisheries and public infrastructure, and to contribute to the health well-being and livelihoods of Tuvaluans; and
- Participate in international conventions and forums with a view to obtaining the fullest possible assistance to address the implications of climate change and undertake adaptation initiatives.

[National Strategic Action Plan for Climate Change Adaptation and Disaster Risk Management 2012-2016](#). Actions include conduct training for all eight island Kaupule on integrating climate change and disaster risks into Island Strategic Plans.

[National Action Plan to Combat Land Degradation and Drought \(2006\)](#). Six projects to be implemented:

- Water management: Northern Islands Rainwater Catchment Enhancement Project;
- Community tree care: Tuvalu Community Tree Care Project;
- Developing national environmental protection legislation: development of National Environmental Protection Act with provisions for environmental impact assessment and regulations related to sustainable land management;
- Water catchment development (Funafuti): Funafuti AirstripWater Catchment Development Project;
- Protected area survey: Tuvalu Land-Based Protected Area Survey Project; and

Integrated solid waste management: Integrated Solid Waste Management Project (Funafuti).

NET ZERO TARGET

2050 – proposed/in discussion. [1st NDC](#): 22/04/2016. 100% reduction (i.e. almost zero emissions) in GHG emissions from the electricity generation by 2025; 60% reduction in GHG emissions from the entire energy sector by 2025 compared to 2010.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Seven major causes of land degradation](#):

- Lack of land use planning (specifically related to a road project on Funafuti);
- Sea level rise;
- Drought and bush fires;
- Unsustainable agricultural practices;
- Unsustainable development activities (seawalls and boat ramps);
- Unsustainable use of watershed (extraction of materials from the foreshore leading to accelerated coastal erosion and loss of land); and Uncontrolled waste disposal.

VANUATU

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
3	6	0	7	307 150	0.0%	N/A

SUMMARY

Vanuatu's national climate framework consists of 3 laws, 6 policies and 7 climate targets. In 2018, the [National Policy on Climate Change and Disaster-Induced Displacement](#) was passed which seeks to minimise the drivers of displacement, understand the population's needs and wishes and promote access to disaster-resilient housing. The [Vanuatu Climate Change and Disaster Risk Reduction Policy 2016-2030](#) discusses a 2012 UN report which assessed Vanuatu as one of the most highly exposed countries in the world to disaster risks, with many being made worse and more frequent by climate change. The policy includes measures such as adaptation and disaster risk reduction which ensures community inclusion, low carbon development, use of renewables and increased energy efficiency. Equity, collaboration, innovation and sustainability are core principles throughout this policy.

- Ranked 140 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The legal system of the Republic of Vanuatu combines English common law, French civil law and indigenous customary law. The Parliament of Vanuatu is a unicameral legislative body that comprises 52 members, directly elected for four-year terms. The republic was formed in 1980, after 74 years of joint British and French administration. The constitution allows for three arms of government: the executive (Prime Minister and cabinet, also known as the Council of Ministers), the legislature (members of parliament) and the judiciary (judges of the courts). The Republic of Vanuatu comprises seventeen multi-member constituencies. The parliament is derived from the Westminster system and includes a President, elected for a five-year term by members of parliament and the presidents of Vanuatu's local government councils (who together comprise the Electoral College). The President is largely a figurehead, and may not veto parliamentary legislation unless the Supreme Court considers it to be contrary to the constitution.

CONSTITUTION

The Constitution (last revised 2013) asserts Vanuatu to be a sovereign democratic state, with sovereignty vested in the people of Vanuatu which they exercise through their elected representatives. The Constitution enumerates certain fundamental rights and freedoms of the individual, establishes a basic citizenship law, and establishes and regulates the country's major political, judicial, and cultural institutions.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Meteorology, Geological hazards and Climate Change Act no 25/2016.](#) The Meteorology, Geological hazards and Climate Change act sets the following objectives: 1) to ensure a high quality services provided in relation to weather, climate, flood forecasting and geological hazards; 2) to promote capacities of governments, communities and organisations to understand and respond to risks arising from weather events, climate change and geological hazards.

[The Environmental Management and Conservation Act No. 12 as amended by The Environmental Management and Conservation \(Amendment\) Act No. 28 \(2011\).](#) The Amendment Act makes a number of important changes directly relevant to climate change. It includes a definition of climate change. It also adds the concept of ecosystem services and processes to the Act, and applies the precautionary principle to any decision made regarding the environment that may risk human health or threaten damage to the environment. It also specifies that any decision made under the terms of the Act must be guided by consideration of climate change adaptation and mitigation issues.

Policies:

[National Policy on Climate Change and Disaster-Induced Displacement \(2018\).](#) The policy seeks to minimise the drivers of displacement, better understand the population's needs and wishes and take it into account, and promote access to disaster-resilient housing.

NET ZERO TARGET

2050 – proposed/in discussion.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

From the [Vanuatu Climate Change and Disaster Risk Reduction Policy 2016-2030](#): a 2012 United Nations report assessed Vanuatu as one of the most highly exposed countries in the world to disaster risks. Vanuatu is vulnerable to a range of hazards, including volcanic eruptions, earthquakes, tsunamis, cyclones, climate variability, storm surge, landslides, droughts and flooding. Potential impacts of climate change on Vanuatu's agriculture,

fisheries, forestry, tourism, health, transport and infrastructure sectors were considered. Projected consequences of climate change include:

reduced availability of fresh water; shifts in crop seasonality of harvest, planting and fruiting;

- more pests and diseases of animals, crops and trees;
- saltwater inundation and intrusion of coastal land and groundwater;
- compromised food security;
- coral reef deterioration;
- reduced fisheries productivity;
- increased risk of human disease and health problems, including vector-borne disease transmission and heat-related illness;
- damage to infrastructure;
- loss of coastal land; and
- reduced economic growth and revenue generation

VIETNAM

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
5	29	0	41	97.34 m	0.66%	Critically Insufficient

SUMMARY

Vietnam's national climate framework consists of 5 laws, 29 policies and 41 targets. The [CAT](#) gives Vietnam an overall rating of "Critically Insufficient". Stating that it lacks policies for a low-carbon economy transition and has not focused on emissions reduction. Furthermore, it states that whilst there are some positive developments in renewable energy policies (such as the [National Energy Policy 2019-2030](#)), these don't outweigh Vietnam's continued expansion of fossil fuels. However, Vietnam has the potential to become a regional leader for solar power. A 2017 [policy](#) sets out the mechanisms to encourage the development of solar projects, which includes funding and incentives. In 2017, Vietnam's Green Growth Strategy was passed, the key themes of which include low carbon growth and the greening of production and lifestyles. The strategy contains numerous targets, such as reducing GHG emissions by at least 1% per year (unconditional) and 2% per year (conditional) by 2030.

- Ranked 117 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The majority of power resides at this central level with all laws and policies issued by the National Assembly and the government. The former produces framework legislation, while the latter provides guidance on the implementation of legislation. The National Assembly is a unicameral body elected for a five-year term, which elects a president as head of state, and a prime minister as head of government. The assembly is Vietnam's legislative body, and the highest level representative body. It is responsible for approving and supervising the implementation of state plans. The Communist Party has decisive influence over the executive and exercises control through the Central Committee. Members of the party hold all senior government positions. The legislative branch is exercised by the National Assembly, a 498-member unicameral body elected to a five-year term and is recognized as "the highest organ of state power". The National Assembly further decides significant national affairs and has control over all activities of the State (article 69), including making and

amending the Constitution (article 70), and naming the President and cabinet, the Prime Minister and the President of the Supreme People's Court.

CONSTITUTION

Vietnam is a highly centralised state, whose constitution provides the fundamental and highest law. The current Constitution of the Socialist Republic of Vietnam was passed in 1992; it has since had two amends in 2001 and 2013. Vietnam is a socialist republic with the Vietnamese Communist Party as the sole source of leadership for the State and society. National Assembly holds the power of control of conformity over the Constitution and abrogating decisions from the Supreme People's Court — the highest court for appeal and review.

[The first paragraph of](#) article 63 establishes that the State has to "take initiative" preventing and resisting natural calamities, as well as responding to climate change. This text reads as follows: "1. The State has a policy to protect the environment; manages, and effectively and stably use natural resources; protects the nature and biodiversity; takes initiative in prevention and resistance against natural calamities and response to climate change. 2. The State encourages all acts of protection of the environment, development and use of new energy and recycled energy. 3. Organizations and individuals who cause environmental pollution, debilitate natural resources and weaken biodiversity shall be strictly dealt with and must be responsible for remedy and compensation for damage".

CLIMATE POLICIES AT NATIONAL LEVEL

[Viet Nam's Plan for Implementation of the Paris Agreement \(PIPA\)](#) forms the basis for whole-of-country action on NDC implementation, and thus for the engagement of the Partnership. Implementation of PIPA is led by the National Climate Change Committee and split among all relevant line ministries, government agencies, subnational actors, and stakeholders, with coordinated support from NDC Partnership members. An extensive mapping of development partners' climate change support projects provides insight into PIPA areas requiring further support through gap analyses. An NDC Implementation Platform is being established to become operational beginning in 2020 for results-oriented and inclusive dialogues between partners and line ministries on progress towards achieving the NDC targets, and for coordinating effective NDC action to accelerate implementation.

Laws:

[Law on Natural Disaster Prevention and Control](#) (2019). It specifies that natural disaster prevention and control activities must be based on scientific grounds, protect the environment, and recognise the importance of adapting to climate change. It requires the creation, every 10 years, of a National Strategy on Natural Disaster Prevention and Control which must include results of any climate change-related risks. District level and provincial natural disaster prevention and control plans must identify potential climate change-related impacts on socio-economic activities.

[Law on Marine and Island Resources and Environment \(2015\)](#). Article 4 notably charges the government to protect these areas from climate change and sea-level rise.

[Law on Environmental Protection \(2014\)](#). The Law specifies that environmental protection should be in harmony with economic development, social protection, biodiversity protection and adapting to climate change. The revised law replaces a previous version published in 2005 and states that protecting the environment is the responsibility of all agencies, organisations, households and individuals; that organisations and individuals that benefit from the environment are responsible for providing financial support for environmental protection activities; and also outlines a polluter-pays principle. It recommends that the development and use of clean and renewable forms of energy be encouraged to reduce GHG emissions and to protect the ozone layer. It also specifies that a road map is to be developed so that Vietnam may take part in global GHG mitigation activities that are appropriate with respect to the country's socio-economic circumstances and the international treaties of which Vietnam is a member.

[Vietnam's Green Growth Strategy for 2021-2030, vision 2050 and related PM Decisions](#). Reduce GHG emission by 1.5-2% per year by 2030, 2050 against a 2010 baseline.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

Policies:

[PM Decision 1002/2009 on Community Awareness and Community-based management of natural disaster risks](#). The objectives of the scheme include: 1) to perfect mechanisms and policies on community-based management of natural disaster risks from central to local levels 2) to improve the capacity of local administration officials on natural disaster prevention, combat and mitigation; 3) to develop disaster prevention plans, information and communication systems in all villages and communes highly prone to natural disasters; 4) to develop core forces specialised in natural disaster mitigation and a contingent of volunteers to assist people; 5) to disseminate knowledge about flood and storm prevention; 6) to include knowledge on natural disaster prevention and mitigation in general schools' curricula.

NET ZERO TARGET

2050 – declaration/pledge at COP26. [Updated NDC](#): With domestic resources, by 2025 Viet Nam will have reduced total GHG emissions by about 7.3% compared to the BAU scenario (equivalent to 52.9 million tonnes of CO₂eq), and by 2030 Viet Nam will have reduced total GHG emissions by about 9% compared to the BAU scenario (equivalent to 83.9 million tonnes of CO₂eq). The above-mentioned 9% contribution can be increased to 27% by 2030 (equivalent to 250.8 million tonnes of CO₂eq) with international support. The adaptation component identifies strategic tasks in order to improve adaptive capacity, enhance resilience, and reduce risks caused by climate change, thus contributing to the achievement of the country's sustainable development goals.

CLIMATE ACTION TRACKER RATING

CAT rating: Critically insufficient. Viet Nam lacks policies for a transition to a low-carbon economy, and has not focused efforts on emissions reductions. While renewable energy policy has seen some positive developments, they don't outweigh plans for continuing the expansion of fossil fuels. Solar capacity has increased despite the pandemic and global supply chain disruptions. Viet Nam has the potential to become a regional leader for solar and has a large untapped potential for offshore wind, yet its coal and gas pipelines are still expansive: Viet Nam has the third largest coal power plant pipeline globally, behind China and India. Viet Nam updated its Paris Agreement NDC target in 2020 without driving more ambitious action. The update resulted in a slightly lower emissions level than the previous target, and is still well above projected emissions under current policies and action.

ISSUES & CHALLENGES

Vietnam's coastline is 3,200 kilometers long and 70 percent of its population lives in coastal areas and low-lying deltas. Given the country's concentration of population and economic assets in exposed areas, the negative impact on industrial production and economic growth could be unimaginable. Extreme natural disasters have caused huge Vietnamese casualties and property damage. In the first half of 2016, water intrusion, heavy rainfall, and extremely cold weather resulted in 37 deaths and 108 injuries, disaster losses are estimated to be 757 million US dollars. [Asia Times](#).

BARBADOS

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	7	0	4	287 371	0.01 %	N/A

SUMMARY

Barbados's national climate framework consists of 2 laws, 7 policies and 4 climate targets. The 2012 National Climate Change Policy aims to establish a national process for its adaptation to climate change, as well as reducing GHG emissions and increasing renewable energy use. As an island state, Barbados is particularly vulnerable to the effects of climate change through sea level rise, increases in tidal and storm surges, coastal erosion and more frequent and intense tropical cyclones. In its [National Energy Policy 2019-2030](#), Barbados aims to achieve a fully renewable power grid by 2030, as well as carbon neutrality.

- Ranked 58 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Barbados has been an independent country since 30 November 1966. It functions as a parliamentary republic modelled on the British Westminster system. The head of state is the President of Barbados elected by the Parliament of Barbados for a term of four years, and advised on matters of the Barbadian state by the Prime Minister of Barbados, who is head of government. There are 30 representatives within the House of Assembly, the lower chamber of Parliament. Legislation is passed by the Parliament of Barbados but does not have the force of law unless the President grants her assent to that law. The right to withhold assent is absolute and cannot be overridden by Parliament.

CONSTITUTION

The Constitution of Barbados is the supreme law of the country. It was adopted in 1966 and last amended in 2007.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National Energy Policy 2019-2030](#). This document lays out the governmental policy to achieve a fully renewable-powered grid by 2030 and reach carbon neutrality at the same date.

[National Climate Change Policy](#). The Barbados National Climate Change Policy of 2012 aims at establishing a national process for adaptation to climate change, reduce the country's greenhouse gasses emissions, design appropriate mechanisms to respond to climate change, and move towards renewable energy.

NET ZERO TARGET

2030 - [in policy document. Updated NDC](#): 44% reduction by 2030 in GHG emissions compared to the BAU scenario, translating to a 23% reduction compared to 2008 in absolute terms; Interim target of 37% reduction compared to its BAU scenario by 2025.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[As an island state](#), Barbados is highly vulnerable to hurricanes and other natural hazards, and is particularly susceptible to the potential impacts of climate change, including coastal inundation and sea level rise, an increase in tidal and storm surge levels, coastal erosion, rising temperatures, changes in rainfall patterns, drought and more frequent and intense tropical cyclones.

COLOMBIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
10	28	2	8	50.88 m	0.49%	Highly Insufficient

SUMMARY

Colombia's national climate framework consists of 10 laws, 28 policies and 8 climate targets. In 2017, the [National Policy for Climate Change](#) was passed, which aimed to incorporate climate change management into public and private decision making to encourage a climate-resilient and low-carbon development pathway. The policy also set a long-term target for the country to be carbon neutral. In 2018, a law passed [Establishing Guidelines for the Management of Climate Change](#) for national government and subnational municipalities and districts. This addresses adaptation, mitigation and GHG reductions, as well as reducing the vulnerability of the population and ecosystems. The [CAT](#) gives Colombia an overall rating of "Highly Insufficient", stating it needs stronger actions to cut emissions across the board.

- Ranked 83 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The Republic of Colombia is a unitary republic, governed by representatives of the people, who are elected through direct vote. The three branches of governmental power are the executive, the legislative, and the judiciary. The legislative power is vested in a bicameral Congress composed of a Senate, with 102 members, and a House of Representatives with 163 members. Senators and Representatives are elected to four year-terms and may be re-elected for indefinite terms.

CONSTITUTION

The 1991 Constitution (last revised 2015) is the source and origin of all laws and it overrides them all. Objections to bills by reasons of constitutionality are submitted to the Constitutional Court. If both chambers, by simple majority votes, override the President's objections for reasons of convenience, or if the Court dismisses objections for reasons of constitutionality, the President is required to sanction and enact the bill as law. The structure of Government and the supreme set of norms are provided by the Constitution. Congress in turn approves laws with varying hierarchy that in all cases must be consistent with the Constitution. International treaties duly ratified by Congress also have the status of law. The Constitution grants the President regulatory power to issue decrees, resolutions, directives and orders that must conform to existing laws.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Law no 1931 establishing guidelines for the management of climate change \(2018\)](#). This law establishes the guidelines for the management of climate change in the decisions of public and private persons, the concurrence of the Nation, Departments, Municipalities, Districts, Metropolitan Areas and Environmental Authorities mainly in the actions of adaptation to climate change, as well as as in mitigation of greenhouse gasses, with the aim of reducing the vulnerability of the population and the ecosystems of the country against its effects and promoting the transition towards a competitive, sustainable economy and low carbon development. Both mitigation and adaptation are pursued.

[Law 1715/2014, regulating the integration and promotion of non-conventional renewable energy \(FNCER\)](#). The 2014 law aims to promote the development and use of non-conventional energy sources, mainly renewable energy sources, in the national energy system, by integrating them into the electricity market and in other energy uses.

Policies:

[Colombian Low-Carbon Development Strategy \(2019\)](#). The Colombian Low-Carbon Development Strategy (ECDBC) was launched in February 2012 as a tool to deliver the objectives of the National Development Plan 2011-2014 and the CONPES Document on Climate Change by promoting efficient low-carbon growth. It foresees the identification of a GHG emissions baseline and the formulation and implementation of low-carbon development plans for the sectors of energy, mining, agriculture, transportation, industry, waste and construction.

[National Climate Finance Strategy \(2018\)](#). This document derives from Colombia's National Policy for Climate Change. It defines the strategy for the Financial Management Committee of SISCLIMA, the administration's body in charge of dealing with climate change, to follow.

[National Policy for Climate Change \(2017\)](#). The National Policy for Climate Change aims to incorporate climate change management into public and private decisions to advance in a climate-resilient and low-carbon development path that reduces the risks of climate change and allows opportunities to be seized. The long-term objective is for the country to be carbon neutral.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Law 1943 for the restoration of the balance of the general budget \(2018\)](#). The article 800-1 of this law states that the object of rental tax agreements will be direct investment in the execution of projects of economic and social importance in the different municipalities defined as the Areas Most Affected by the Armed Conflict, related to drinking water and basic sanitation, energy, public health, public education, rural public goods, adaptation to climate change and risk management, payments for environmental services.

[National Climate Change Decree \(SISCLIMA\) \(2016\)](#). Decree creates Regional Nodes for Climate Change, responsible for "promoting and supporting implementation of climate change policies, strategies, plans, programs, projects and actions in regions".

NET ZERO TARGET

2050 – proposed/in discussion. Updated NDC: "Colombia commits to maximum of 169.44 MtCO₂e in 2030 (equivalent to 51% reduction compared to BAU) and reduce black carbon emissions by 40% compared to 2014 in 2030."

CLIMATE ACTION TRACKER RATING

[CAT Tracker](#): Highly insufficient. "Colombia needs stronger action to cut emissions across the board. It adopted a stronger target in its NDC update, but that did not go far enough."

"Reducing emissions from deforestation is a vital part of Colombia's climate action, but in order to fully decarbonise its economy, Colombia will also need to focus on other sectors, especially energy and transport."

"Colombia updated its NDC target in December 2020. It intends to rely on land-based mitigation measures for approximately 70% of the reductions needed for its updated target, despite the fact that deforestation levels in the country continue to rise and current forest protection policies are not adequately enforced. While Colombia does have mitigation targets for energy and transport, further action is needed. Its first renewable energy auction occurred in 2019, awarding 2200 MW of new capacity and putting the country on track to exceed its 1500 MW new renewable capacity target by 2022. The Colombian Ministry of Energy signed an agreement with eight energy companies to reach carbon neutrality in Colombia's electricity sector by 2050, though this is likely not fast enough to be Paris compatible. Colombia, which still depends on coal for roughly 10% of its power supply, has yet to announce a coal phase-out strategy. In Latin America, coal power generation would need to be reduced by 85% by 2030 (compared to 2010 levels), leading to a phase-out by 2032 to be Paris compatible."

ISSUES & CHALLENGES

From [Mainstreaming Climate Change in Colombia](#) project: "Colombia is at high risk from climate change impacts. The majority of the population lives in the elevated Andes, where water shortages and land instability are already a reality, and on the coast, where the increase in sea level and floods can affect key human settlements and economic activities. Furthermore, the country has a high incidence of extreme events with growing emergencies associated with climate conditions. Colombia has made strides in the attainment of the MDGs. However, these goals are still fragile and marked by a scenario burdened with social conflicts teeming with regional inequalities and social gaps, including a high percentage of vulnerable populations that may suffer serious setbacks in their human development due precisely to climate change."

COSTA RICA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
5	22	0	21	5.094m	0.01%	Almost Sufficient

SUMMARY

Costa Rica's national climate framework consists of 5 laws, 22 policies and 21 climate targets. In 2011, a decree was passed declaring a moratorium on oil exploitation. In 2019, this decree was amended to extend this to 2050. In 2018, the government set out a [strategy](#) to decarbonise Costa Rica's economy until 2050. Focus areas include developing safe and efficient renewable transport and modernising the industrial sector, through sustainable and efficient processes with low and zero carbon technology. The policy also set a target of net zero by 2050. The [CAT](#) gives Costa Rica an overall rating of "Almost Sufficient", stating that whilst its climate policies are consistent with the Paris Agreement's 1.5°C temperature limit, its climate commitments are not, but could be with moderate improvements.

- Ranked 62 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The National Assembly is constituted of 57 Members of the Parliament – MPs directly elected for a single four-year term without the possibility of direct re-election. The proposal of a piece of law can be initiated by the Executive, the Legislature and directly by citizens. Popular initiative requires the endorsement of a minimum of 5% of the electorate and should not address fiscal issues, taxation, loans and other administrative acts. Legislative power in Costa Rica is unicameral.

CONSTITUTION

The National Constitution was established in 1949 and last revised in 2020. It provides for a Legislative Assembly of 57 deputies, a president and two vice-presidents. It describes Costa Rica as a democratic, free and independent Republic.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[Decree 36693-MINAET declaring a national moratoria on oil exploitation \(2011\)](#). This document declares a moratorium all activities that have "the purpose of developing the exploration and exploitation of oil deposits in the continental and marine national territory". The 2019 amendment extends this moratorium to 2050.

[Decarbonisation plan \(2018\)](#). This plan sets out the government's strategy to decarbonise Costa Rica's economy until 2050. Focus areas include development of a mobility system based on safe, efficient and renewable public transport, and active and shared mobility schemes and modernization of the industrial sector through the application of electrical, efficient, and sustainable processes and technologies of low and zero emissions. Commits to net zero by 2050.

[National Adaptation Policy 2018-2030](#). This Policy is proposed as a guiding framework that will guide the country's actions in terms of adaptation. It establishes an overall and sectoral diagnostic about how climate change will impact Costa Rica, synthesises the global and national legal norms under which the government has to place its adaptation efforts, discusses the institutional framework under which these efforts must be undertaken, and develops a strategy.

2018 [Decree No. 41122 - 'formalises the Program Carbon Neutral Country 2.0'](#) In 2007, Costa Rica launched its commitment of being carbon neutral by 2021, a goal included in the Estrategia Nacional de Cambio Climático (2009) y en su Plan de Acción (2013).

[Ministerial Decree no. 40616 creating the Citizen Advisory Council on Climate Change \(2017\)](#).

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[Forest Law \(1996\)](#). Operating on the basis of decentralisation of policy-making, the 1996 law also supported the Regional Environmental Councils, which have played a limited role so far.

NET ZERO TARGET

2050 – in policy document. Updated NDC: 29/12/2020. Costa Rica Commits to an absolute maximum of net emissions by 2030 of 9.11 MtCO₂e, and an absolute maximum budget of net- emissions during 2021-2030 of 106.53 MtCO₂e.

CLIMATE ACTION TRACKER RATING

Almost sufficient. [From the Climate Action Tracker](#): The "Almost sufficient" rating indicates that while Costa Rica's climate policies are consistent with the Paris Agreement's 1.5°C temperature limit, its climate commitments are not, but could be with moderate improvements. Costa Rica's 2030 emissions reduction target of "maximum absolute net emissions of 9.11 MtCO₂e incl. LULUCF" is rated as "Almost sufficient" when compared to modelled domestic emissions pathways and "1.5°C Paris Agreement compatible" when

compared with its fair-share contribution to climate action. Costa Rica's policies are in line with what is needed to limit warming to 1.5°C, but its target needs some improvements. While Costa Rica's target meets its fair-share contribution to limiting warming to 1.5°C, it needs additional support to implement additional policies and to strengthen its reduction target, in order to get national emissions on a pathway compatible with 1.5°C.

ISSUES & CHALLENGES

[From the Climate Change Knowledge Portal](#): Costa Rica is at risk from several natural disasters, which pose a great threat under a changing climate. Costa Rica has the 8th highest economic risk exposure to three or more hazards and 6.8 percent of its total area is exposed to three or more adverse natural events. Further, 77.9 percent of Costa Rica's population and 80.1 percent of the country's gross domestic product reside in areas at high risk of multiple hazards, including floods and landslides, cyclones, storm surge, and sea level rise.

DOMINICAN REPUBLIC

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
9	9	0	6	10.85m	0.06%	N/A

SUMMARY

The Dominican Republic's national climate framework consists of 9 laws, 9 policies and 6 targets. The [National Policy for Climate Change](#) was passed in 2016 to manage the effects of climate change on the population and national territory through strategies and programmes at the national level in accordance with the UNFCCC. In 2018, the intersectional [Climate Change and Gender Action Plan](#) was passed, which aims at advancing women's empowerment and enabling gender equality in the context of climate change response plans. In 2019, the Dominican Republic implemented its [NDC Partnership Plan](#) which looks to develop a package of legal and planning instruments to implement its NDC in areas including waste, renewable energy and forestry. The region is vulnerable to floods and mudslides from severe storms and is in the centre of the hurricane belt.

- Ranked 88 on the Human Development Index.

CONSTITUTIONAL SYSTEM

The Dominican Republic is an electoral democracy with universal and compulsory suffrage, in which the legal system is based on French Civil Codes. The President is both the Head of State and the Head of the Government. The President and Vice-President are elected on the same ticket by popular vote for four year terms. The National Congress is bicameral, with a 32-seat Senate and a 183-seat Chamber of Deputies, the members of which are elected by popular vote for 4-year terms without term-limits.

CONSTITUTION

The Dominican Republic put climate change at the heart of its development agenda, recognizing it in the country's Constitution. The first Constitution was written in 1844 following the nation's independence from Haiti. Subsequently, there have been 39 constitutions, the most recent of which was passed in 2015. The Constitution of Dominican Republic is "the

supreme norm and foundation of the juridical order of the State. Any law, decree, resolution, regulation or act that is contrary to this Constitution is null of plain right" (article 6). The Constitutional Court's decisions are deemed definitive and irrevocable and constitute binding precedents for the public powers and all the organs of the State.

CLIMATE POLICIES AT NATIONAL LEVEL

[From NDC Partnership](#): to bring its NDC to reality, the Government launched their Partnership Plan for NDC implementation in May 2019. Due to the Dominican Republic's high vulnerability to climate change-related impacts, its Partnership Plan looks to develop a package of legal and planning instruments to implement its NDC in the land use, waste, energy efficiency, renewable energy, and forestry sectors. Strong emphasis has been placed on kick-starting demonstrative adaptation and mitigation initiatives on the ground with approaches to improve coordination and learning among all relevant state and non-state actors. Key outputs of the Partnership Plan include gradual renewal of the public transport fleet, improved control of transport emissions, increased share of renewables in the country's energy matrix, reduced deforestation, and supporting sustainable business in the tourism and industrial sectors.

[Law 94-20 on Environmental Education and Communication \(2020\)](#). Its stated goals include promoting the implementation of policies and measures for adaptation to climate change and the management of climate risks & encourage the adoption of behaviors in the individual and human groups, and the development of skills to search for joint solutions to environmental problems that generate climate change, contributing to the prevention of environmental impacts and the ability to plan solutions those that already exist, emphasizing the impacts generated by climate change.

[Law 1-12: National Development Strategy 2030 \(2012\)](#). It contains a central theme that mandates national adaptation to climate change. The Law establishes a binding commitment to achieve a reduction in GHG emissions of 25% by 2030, compared to 2010 levels, and mandates a review of targets to reduce emissions every five years until 2030. Additionally, mandates that GDP increase by 140% over the period 2010-2030.

Policies:

[Climate Change and Gender Action Plan \(PAGCC-RD\) \(2018\)](#). The ccGAP is an intersectional document aiming at advancing women empowerment and enabling gender equality while setting climate change response plans. It focuses in priority on infrastructure, energy and transport; waste; forests; water; sustainable agriculture and food security; Health; coastal zones; disaster risk reduction, preparedness and resilience; and tourism.

[National Policy for Climate Change \(2016\)](#). Manage climate variability directly or indirectly attributed to human activity and the effects it generates on the population and the national territory, through an adequate strategy, programming, plans and projects at the national level, in accordance with the provisions of the Convention United Nations Framework on Climate Change and the Kyoto Protocol.

NET ZERO TARGET

2050 – proposed/in discussion. Updated NDC: 29/12/2020. Dominican Republic commits to reduce emissions by 27% (7% unconditional to domestic finances and 20% conditional to external finances) by 2030 compared to BAU. This also includes an adaptation component.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

The Dominican Republic shares the Caribbean Island of Hispaniola with Haiti and is one of the most vulnerable countries in the world to climate change. The north-eastern region is vulnerable to floods and mudslides from severe storms, while arid parts of the northwest are experiencing increasing temperatures leading to more drought, which reduces crop yields and water supplies. Hispaniola Island is in the center of a hurricane belt, where intense storms often damage coastal infrastructure and fish nursery areas, which negatively impact tourism and coastal fisheries. The energy sector is responsible for most of the Dominican Republic's greenhouse gas emissions, followed by agriculture, industrial processes, and waste.

GRENADA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	7	0	14	112 519	0.0%	N/A

SUMMARY

Grenada's national climate framework consists of 0 laws, 7 policies and 14 targets. Grenada is particularly vulnerable to extreme weather events, and has seen an increase in crop loss, forest fires and water shortages due to climate change. The [National Climate Change Policy for Grenada, Carriacou and Petite Martinique \(2017-2021\)](#) includes strengthening institutional structures to support adaptation and mitigation measures, as well as integrating adaptation across levels of government into development policies, plans, programmes, projects, budgets and processes. The policy also aims to build resilience, particularly in priority areas such as water supply and sewage management, agriculture, health and coastal zone management. The [Grenada Vision 2030](#) (2012) includes a target of 100% renewable energy in the electricity and transport sector by 2030.

- Ranked 74 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Grenada is a small island state with a parliamentary democracy, which gained independence from the UK in 1974. It is a member of the Commonwealth of Nations, with the British Monarch as head of the executive and part of the legislature, represented by the Governor General. The Prime Minister is head of Government and the legislature, which consists of the bicameral Parliament (Senate – 13 seats, 10 members appointed by the Government; House of Representatives – 15 seats, elected by popular vote in single-member constituencies for a five-year term). Bills must be adopted by both Houses and receive Royal Assent from the Governor General before they can be published in the Official Gazette and become law.

CONSTITUTION

The Constitution (last revised 1992) provides a general guarantee of equality, as well as specific guarantees of equality regardless of political party, creed/belief, skin colour, race, origin and gender. The Constitution provides for a Governor General, a bicameral parliament, a prime minister and a cabinet of ministers.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National Climate Change Policy for Grenada, Carriacou and Petite Martinique \(2017-2021\)](#).

Policy objectives include: 1) Strengthen institutional structure to support coordination, mainstreaming and implementation of climate change adaptation and mitigation action, along with the systematic integration of climate change adaptation into development policies, plans, programmes, projects, budgets and processes. 2) Build climate resilience in the following priority thematic areas: water supply and sewage management; 'agriculture, agri-business and food security'; biodiversity and ecosystems; human health and coastal zone management.

[Grenada Vision 2030 \(2012\)](#). Lays down the proposal to establish a 100% renewable energy target for both the electricity and transport sectors for 2030.

[Grenada Disaster Vulnerability Reduction Project and Resettlement Policy Framework \(2011\)](#). The Grenada Disaster Vulnerability Reduction Project, prepared in cooperation with the World Bank, aims to reduce Grenada's vulnerability to natural hazards and climate change. It proposes a number of civil works in order to reduce the infrastructure vulnerability to natural hazards and climate change. The project is co-financed by the World Bank and the Climate Investment Fund up to USD26.2m, including a grant of USD8m.

[Grenada Strategic Program for Climate Resilience \(2011\)](#). Proposes six main areas of intervention through investment projects (IP) and technical assistance (TA) including IP1: Disaster Vulnerability and Climate Risk Reduction & TA 4: Preparation of a Project for Rehabilitation of Bathway Sandstone Reef.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

The Constitution (last revised 1992) does not make any general provision for local government; however, it states there should be a local government council on Carriacou and Petite Martinique. Whilst the Carriacou and Petite Martinique County Council Act 1995 has yet to be implemented, plans to establish a county council there are at an advanced stage as of 2019.

NET ZERO TARGET

2050 – proposed/in discussion. 2nd NDC: Grenada commits to reducing its GHG emissions by 40% of the 2010 emissions levels by 2030. Net anthropogenic CO₂ emissions reaching net zero around 2050.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

As a Small Island Developing State, Grenada is particularly vulnerable to the impacts of climate change, as evidenced by the impacts of extreme weather events and the occurrences of increased forest fires, crop loss, water shortages, and pests and diseases in recent years.

GUATEMALA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
2	6	0	7	16.86 m	0.09%	N/A

SUMMARY

Guatemala's national climate framework consists of 2 laws, 6 policies and 7 targets. Poor crop yields in Guatemala due to climate change have been identified as a factor for migration to the United States and indigenous communities are at risk of food shortages. In 2013, the [Framework Law to Regulate Reduction of Vulnerability, Mandatory Adaptation to the Effects of Climate Change, and the Mitigation of Greenhouse Gas Effects](#) was passed to develop national and institutional adaptation and mitigation plans, and established the National Council of Climate Change presided over by the President. In 2016, the [National Action Plan for Climate Change](#) was passed, and lists adaptation priorities - such as human health, coastal zones, small-scale agriculture, forests infrastructure and water resources - and mitigation priorities – such as energy, industrial processes, the agro-industrial sector, land use and scrap.

- Ranked 127 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Guatemala has a unicameral legislative system, with legislative power delegated to the congress of the republic. The 158 Members of the congress are directly elected through universal suffrage for a four year term, with possibility of re-election. In the case of presidential veto, the congress can overturn the decision by a two-thirds majority of votes and send the new law for publication in the Gazette.

CONSTITUTION

The legislative process is defined by the 1985 Constitution, amended in 1993 by referendum. The Constitution states that Guatemala's system of government is republican, democratic and representative. The Constitution provides for a president of the republic who is head of state, a council of ministers and the congress of the republic.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Framework law to regulate reduction of vulnerability, mandatory adaptation to the effects of climate change, and the mitigation of greenhouse gas effects](#) (2013). The primary objective of the law is to provide an immediate and co-ordinated response to climate change, in part through the establishment of the National Council of Climate Change presided over by the President of the Republic, and the development of a national adaptation and mitigation plan, as well as institutional adaptation and mitigation strategies in all public institutions.

Policies:

[National Action Plan for Climate Change \(2016\)](#). Adaptation efforts should prioritise human health, coastal marine zones, small-scale agriculture, forests, infrastructure and water resources. Mitigation efforts should focus on energy, industrial processes, the agroindustrial sector, land use and scrap.

[Climate Change Policy \(Government agreement N.329-2009\)](#). The Policy lays out the basis, objectives, entry points, guidelines and legal basis for national climate change adaptation and mitigation. It aims to develop climate change national capacities; promote vulnerability reduction and improvements in adaptation to climate change; and mitigate GHG emissions. The policy was detailed in 2016 with the National Action Plan for Climate Change.

NET ZERO TARGET

No target. "Unconditional INDC: 11.2% reduction from BAU by 2030. Conditional INDC: 22.6% reduction from BAU by 2030"

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Ranked [16 on Global Climate Risk Index](#). Both commercial agricultural production and subsistence farming have declined, and thus [subsistence farmers find it more difficult to find work as day laborers](#) when their own harvests fail. [About 300,000](#) subsistence farmers reported crop loss due to drought in 2018. [About half of Guatemala's workforce is in the agricultural sector](#). Poor crop yields due to climate change [have been identified](#) as a factor in migration to the United States. A [report](#) by the Guatemalan System of Climate Change Sciences in 2019 indicated that the rainy season is starting later as a result of climate change, putting subsistence farmers and indigenous people in poor communities at risk of food shortages resulting from poor harvests.

GUYANA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	3	3	5	790,329	0.08%	N/A

SUMMARY

Guyana's national climate framework consists of 0 laws, 3 policies and 5 targets. Guyana's [Green State Development Strategy](#) (2019) aims to foster sustained low-carbon and climate-resilient economic growth as well as good governance and careful management of finite natural resources in accordance with green economy principles. Guyana also has a [Low Carbon Development Strategy](#) (2009) which contains adaptation and climate resilience measures and programmes including facilitating investment in high-potential and low carbon sectors such as aquaculture, sustainable forestry and eco-tourism. Guyana is most at risk to floods and droughts, with the effects of floods exacerbated by Guyana's low-lying coastline, which is also at risk from rising sea levels.

- Ranked 122 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Guyana's system of government is a parliamentary representative democracy republic where the president is head of state and head of the government. Whilst the cabinet is appointed by the president, it is also responsible to the National Assembly. Legislative power rests with the unicameral National Assembly which may have up to 72 statutory members - there are currently 70, 45 men and 25 women. 65 members are directly elected. The last elections in 2020 were the first to be held after oil reserves were discovered off Guyana's coast in May 2015.

CONSTITUTION

The constitution was last amended in 2016. Elections must take place at least every five years and there are no term limits. The constitution commits to protecting the natural environment through legislative and other reasonable measures. This protection includes preventing pollution and ecological degradation, promoting conservation and securing sustainable development and use of natural resources whilst promoting justifiable economic and social development.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[Framework of the Guyana Green State Development Strategy and Financing Mechanisms \(2017\)](#). This framework lays the principle foundations for inclusive green economic and social growth. The document is the proposed framework for the [Green State Development Strategy \(2019\)](#) providing guidance on the key areas to be developed in the strategy. According to [LEAP](#), this strategy aims to foster sustained low-carbon and climate-resilient economic growth as well as good governance and careful management of finite natural resources in accordance with green economy principles. The development objectives of the policy include a transition to renewable energy, resilient infrastructure and sustainable management of natural resources.

[Low Carbon Development Strategy](#) (2009). The strategy aims to deliver greater economic and social development for the people of Guyana following a low-carbon development path. Adaptation and climate resilience measures in the strategy include low carbon infrastructure, adaptation and hinterland development, with programmes listed such as facilitating investment in high-potential and low carbon sectors such as aquaculture, sustainable forestry and eco-tourism. The strategy lays out methods to ensure adherence to mining regulations to reduce forest degradation. The strategy states: "Forest management should work towards sustainable management of forest with net zero emissions or positive carbon balance in the long-term."

[National Strategy for agriculture in Guyana 2013-2020](#). Its aims include increasing the capacity of the agriculture sector to adapt to climate change and build resilience, to assist the government in providing primary producers with a framework that includes research and development and promotes climate change adaptive agricultural techniques, and to build greater awareness of these techniques.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

Policies:

[National Strategy for agriculture in Guyana 2013-2020](#). At least one training session per year should be conducted with local authorities and stakeholders on disaster management and the distribution of supplies during emergencies such as floods and droughts.

NET ZERO TARGET

2019 - achieved ([self-declared](#)).

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

The [Climate Change Knowledge Portal](#) states: "Guyana is most at risk to floods and droughts. Guyana has experienced many floods in recent years that are heavily influenced by La Niña events. The country's low-lying coastline, which in some areas is 2 m below sea level, causes flooding to be an imminent threat. Sea level rise will lead to inundation of coastal areas, saline intrusion into surface and ground water sources and overtopping of existing sea defences."

HAITI

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
0	2	0	8	11.4 m	0.02%	N/A

SUMMARY

Haiti's national climate framework consists of 0 laws, 2 policies and 8 targets. In 2019, Haiti passed the [National Policy to Fight Climate Change](#), with the aim of low-carbon development, developing resilience to the adverse effects of climate change, generating new jobs and working to eradicate poverty and hunger. Haiti is rated 3rd on the [Global Climate Risk Index](#) for 2000-2019. According to [Climate Links](#), more than half the population live in areas at high risk to the effects of climate change, such as densely populated coastal cities, floodplains and in areas with steep slopes susceptible to landslides.

- Ranked 170 on Human Development Index.

CONSTITUTIONAL SYSTEM

The government of Haiti is a semi-presidential republic, a multiparty system wherein the president of Haiti is head of state elected directly by popular elections held every five years. The prime minister of Haiti acts as head of government and is appointed by the president, chosen from the majority party in the National Assembly. Executive power is exercised by the president and prime minister who together constitute the government. Legislative power is vested in both the government and the two chambers of the National Assembly of Haiti, the Senate (Sénat) and the Chamber of Deputies (Chambre des Députés).

CONSTITUTION

The current structure of Haiti's political system was set forth in the Constitution of Haiti on 29 March 1987 (last revised 2012). The Constitution contains articles on the protection of the environment, stating "any practices that might disturb the ecological balance are strictly forbidden." It also states that as long as forest cover is below 10% of the national territory, measures must be taken to restore the ecological equilibrium. The Constitution encourages the development of local sources of energy, such as solar and wind.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National policy to fight climate change \(2019\)](#). This policy aims to reorient Haiti's socio-economic development towards a more low-carbon regime, resilient to adverse climatic conditions attributable to climate change, generating new jobs and contributing to the eradication of poverty and hunger.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

Article 87-2 of the Constitution (last revised 2012) states: "The interdepartmental Council, in concert with the executive, studies and plans projects for decentralization and development of the country from the social, economic, commercial, agricultural and industrial standpoint."

NET ZERO TARGET

2050 – proposed/in discussion. 1st NDC: 31/07/2017. The Republic of Haiti intends to reduce its emissions by 31% relative to a baseline scenario, representing an absolute reduction of 45.24 MtCO2e.

Unconditional target: Reducing emissions by 5% compared to the reference scenario by 2030, for a cumulative reduction of 10 Mt CO2e.

Conditional target: Reducing emission by an additional 26% relative to a baseline scenario by 2030, for a cumulative reduction of 35.24 MtCO2e.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

Ranked 3 on Global Climate Risk Index.

Ranked 170 on Human Development Index.

[From Climate Links](#): Haiti is the most vulnerable country in Latin America and the Caribbean to climate change. Haiti shares the Caribbean Island of Hispaniola with the Dominican Republic. Factors heightening its vulnerability include topography, land-use practices, low per capita income, high population density, and limited infrastructure and services. More than half of the country's population lives in dense coastal cities, nearby floodplains, and in areas with steep slopes susceptible to landslides. Widespread deforestation and unmaintained drainage infrastructure increase Haiti's vulnerability to hurricanes, storm surges, and flooding, while increasing temperatures during dry months, strengthening tropical storms, and unpredictable rainfall patterns will likely worsen climate impacts on already sensitive sectors. The agriculture sector is responsible for nearly half of greenhouse gas emissions, followed by the energy, waste, industrial processes, land-use change and forestry sectors.

HONDURAS

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
6	10	0	10	9.905 m	0.11%	N/A

SUMMARY

The national climate framework of Honduras consists of 6 laws, 10 policies and 10 targets. In 2014, the [Law on Climate Change](#) was passed, which aims to respond to climate change risks with adaptation and mitigation measures, the specifics of which include preventing poor environmental management. The law also includes core principles that should be followed, the state's organisation on climate policy and the purpose and mission of the Inter-institutional Committee on Climate Change. In 2018, the [National Plan for Adaptation to Climate Change 2018-2030](#) was passed to guide adaptation measures focussed on sustainable development strategies, such as recognising the value of ecosystems and biodiversity in reducing the adverse effects of climate change on the human population and infrastructure, and mainstreaming adaptation in public policy frameworks. In its updated NDC, Honduras committed to reducing emission by 16% (excluding LULUCF) by 2030 compared to the BAU scenario.

- Ranked 132 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Honduras is governed within a framework of a presidential representative democratic republic. The President of Honduras is both head of state and head of government. Executive power is exercised by the Honduran government. Legislative power is vested in the National Congress of Honduras. The National Congress of Honduras (Congreso Nacional) has 128 members (diputados), elected for a four-year term by proportional representation. Congressional seats are assigned to the parties' candidates on a departmental basis in proportion to the number of votes each party receives.

CONSTITUTION

The Constitution was last revised in 2013 and describes Honduras as a free, democratic and independent republic, with the form of government being democratic, republican and representative. It provides for a National Congress and a president of the republic.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Decree no. 297-2013 \(Law on Climate Change\)](#). The objective of this document is to establish the principles and regulations necessary to plan, prevent and respond in an adequate, coordinated and sustained manner to the impacts generated by climate change in Honduras. It seeks to foster practices aimed at reducing environmental vulnerability and improving adaptation capacity, and develop proposals for the prevention and mitigation of the effects produced by climate change and other causes of poor environmental management.

Policies:

[National Plan for Adaptation to Climate Change 2018-2030](#). The objective of this document is to guide adaptation actions focused on the integration of sustainable development strategies in order to reduce the adverse impacts of climate change and variability in the country. Principles and policy actions include Adoption of precautionary measures for the benefit of the environment even in the face of scientific uncertainty & Participation and social inclusion in the design and implementation of adaptation measures, with special attention to vulnerable groups, with gender equality and in accordance with the needs and potential of indigenous and Afro-Honduran groups.

[National Climate Change Strategy \(2015\)](#). It projects climate scenarios in Honduras, estimates national emissions and sectoral vulnerabilities to climate risk, and sets mitigation and adaptation objectives accordingly.

[National Vision 2010-2038 and National Plan 2010-2022](#). Mitigation and adaptation to climate change are key strategic objectives, with financing and technology transfers as key aspects.

NET ZERO TARGET

No target. Updated NDC: 19/05/2021. Honduras commits to reduce emissions by 16% (excluding LULUCF) by 2030, compared to the BAU scenario, along with sectoral non-GHG targets.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[From Climate Links:](#) Honduras has a mountainous interior that creates two distinct regions with lowland coastal areas on each side. High exposure to extreme weather events is the country's primary source of climate vulnerability, as tropical storms and hurricanes destroy key infrastructure and threaten human life and wellbeing. Additional stressors such as reduced rainfall and higher temperatures negatively impact the agriculture sector, increase risks of water scarcity, and may inhibit hydropower plant expansion. Honduras' coastal ecosystems and fisheries are vulnerable to warming temperatures, compounded by overfishing and environmental degradation. Forest resources are an important source of income in rural areas, contributing to high rates of deforestation and land use which dominate the country's greenhouse gas emissions.

NICARAGUA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
6	7	0	2	6.702m	0.04%	N/A

SUMMARY

Nicaragua's national climate framework consists of 6 laws, 7 policies and 2 targets. Nicaragua's [Resolution A.N. no. 003-2009 \(on climate change and adaptability\)](#) agrees to incorporate climate change as a cross-cutting and high priority issue into national development plans and into the strategic and operational plans of institutions that make up the government. The key aims of the [Presidential Decree 7/2019 establishing the national policy of climate change mitigation and adaptation and creating the national response system to climate change](#) include fostering resilient agricultural development, implementing a low carbon emission energy development strategy, build resilient infrastructure and modernise and strengthen surveillance and early warning systems. It is expected that rainfall in Nicaragua will decrease and this has been acknowledged as a risk to hydroelectric power generation within policies. Nicaragua is highly vulnerable to climate change, particularly as it is situated in the path of Atlantic hurricanes.

- Ranked 128 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Nicaragua's system of government is a presidential representative democratic republic where the president is head of state and head of the government. In the 2021 elections, President Ortega was re-elected for a fourth consecutive term, along with his wife, the Vice President Rosario Murillo. 46 women were elected. Prior to the elections, several potential presidential candidates were arrested. Members of the unicameral National Assembly are elected for five-year terms.

CONSTITUTION

The constitution of Nicaragua was last amended in 2014, which removed presidential term limits. The constitution states the National Assembly may comprise up to 92 members: 90 directly elected members and 2 other members. According to [IPU Parline](#) the other 2 members are "The outgoing President and Vice President of the Republic, who alternate as

members of the National Assembly; and the runner-up in the most recent presidential election and their running mate, who also alternate their membership." The constitution stipulates that lists of candidates for elections must have a 50:50 split of men and women. This was rigorously applied for the first time in the 2021 elections for the whole of the electoral process.

CLIMATE POLICIES AT NATIONAL LEVEL

Laws:

[Laws No. 532 and amending laws 901, 967 and 1037 - on the promotion of electricity generation with renewable sources](#) (2005). Mentions climate change once in reference to the Kyoto protocol. The law ramped up fiscal incentives to promote new projects.

[Law 956/2017 on energy efficiency](#). One principle of the law is to promote the efficient use of energy resources and efficient technologies in energy generation and production processes to protect the environment and adapt to climate change.

[Resolution A.N. no. 003-2009 \(on climate change and adaptability\)](#). The resolution agrees to incorporate climate change as a cross-cutting and high priority issue into national development plans and into the strategic and operational plans of institutions that make up the government. The resolution expresses the importance of including preventative actions in the preparation and implementation of National Adaptation Strategies and Plans to increase the capacity of adaptation in the most vulnerable communities to extreme events and climate change. The resolution also encourages universities and civil society institutions to disseminate their research and knowledge on climate change and best adaptation practices.

[Law 217 on the Environment and Natural Resources, as amended by Law 647](#) (2008). Allows for an adaptation policy which also contains mitigation measures. The law states that the policy should promote adaptation measures of vulnerable populations, strengthen institutional capacity and the capacity of key actors in climate change management, support the availability and exchange of information between national sectors on climate change measures as well as raising awareness of the public, contribute to monitoring and evaluating climate variability and the socioeconomic impact and mitigating climate change through mechanisms created by the UNFCCC.

[Ministerial Resolution no. 014.99 \(creating the Climate Change Commission\)](#) (1999). The commission's role includes to consult and recommend activities relating to climate change. This includes recording inventories of sources and sinks of GHG emissions and promoting consensus at the national levels on strategies, programs and projects on climate change.

Policies:

[National Climate Change Policy \(2022\)](#). The policy promotes comprehensive and effective climate change management at the national level and in the sectors of health, water management, conservation and marine-coastal ecosystems. The policy establishes principles which include climate justice with reparation, gender equity and climate finance. Five pillars of climate action were defined, each with their own policies: (1) adaptation and resilience, (2) mitigation, (3) loss and damage, (4) knowledge, research, innovation and transfer of technologies and good agroclimatic practices and (5) climate governance.

There is a 2017 policy for the [regulation on the generation of renewable energy for self-consumption](#).

[Presidential Decree 7/2019 establishing the national policy of climate change mitigation and adaptation and creating the national response system to climate change](#). The policy aims to "foster development, improve the complementarity to disaster risk management strategies, promote innovation and efficient use of resources, protect the national ecosystems, ensure gender equality and social participation, assess the viability of measures taken, manage climate finance resources, recognise the role of indigenous communities and enhance education over climate change." Key aims of the policy include fostering resilient agricultural development, implementing a low carbon emission energy development strategy, build resilient infrastructure and modernise and strengthen surveillance and early warning systems.

[National Development Plan](#) (2017). Seeks to continue productive modernisation and transformation in the context of climate change. Seeks to "Strengthen development planning in public and private investment, incorporating integrated management criteria for disaster risk reduction and climate change adaptation."

[Decree No. 38/14 approving Regulation implementing Law No. 835 - the Sustainable Rural Tourism Act](#) (2014). The decree mentions climate change once and states that rural tourism enterprises or initiatives shall implement risk management measures, mitigation and adaptation to climate change.

[Electricity Generation Expansion Plan 2016-2030](#) (passed in 2013). Aims for 64% electricity generation from renewable sources by 2023 and 73% by 2030.

[Plan for Adaptation to Climate Change in the Agriculture, Forestry, and Fisheries Sectors](#) (2013). The plan proposes that the sectors carry out measures to protect natural resources, carry out conservation work, recover and harvest water resources, promote adaptation of production systems and livelihoods and promote sustainable production processes.

[National Environmental and Climate Change Strategy 2010-2015](#). The strategy is made up of the following guidelines: "1. Environmental Education for Life 2. Environmental Defence and Protection of Natural Resources 3. Water Conservation, Reclamation, Capture and Harvesting Harvesting 4. Climate Change Mitigation, Adaptation and Risk Management 5. Sustainable Land Management."

[Decree No. 13/04 establishing the National Energy Policy](#) (2004). Does not mention climate change but does promote GHG reduction in energy projects and makes renewable and clean energy technologies a priority.

[Presidential Agreement No. 146/98 on the Restoration and Protection of the Forest Heritage](#) (1998). Proposes measures for carbon sequestration and mentions developing a Nicaraguan Clean Development Commission to mitigate the effects of climate change.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

Laws:

[Law 217 on the Environment and Natural Resources, as amended by Law 647](#) (2008). States that an adaptation policy should promote adaptation measures for vulnerable populations through the implementation of strategies and plans at the regional level as well as national.

Policies:

[Presidential Decree 7/2019 establishing the national policy of climate change mitigation and adaptation and creating the national response system to climate change](#). Municipalities must treat solid waste by adopting efficient treatment systems, adapted to the different climatic conditions of each municipality and with low carbon emissions. Each municipality will select forest areas as centres for environmental initiatives, education and learning for youth and adults.

NET ZERO TARGET

2050 - proposed/in discussion. Unclear when or where this was proposed.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

[Electricity Generation Expansion Plan 2016-2030](#) (passed in 2013). It is expected that rainfall will decrease due to climate change and therefore impact generation from hydroelectric power plants.

According to [Climate Links](#): Nicaragua is "highly vulnerable to climate change due to its geographic positioning along the path of Atlantic hurricanes, high poverty levels and production systems heavily dependent on natural resources. Roughly one-third of GDP is closely linked to the country's natural resource base through the agriculture, timber and fishery sectors. Nicaragua is susceptible to other natural disasters including floods, droughts and landslides, events whose frequency, severity and impacts will be amplified by increased climate variability."

SAINT LUCIA

Climate Laws	Policies	Lawsuits	Climate Targets	Population	% Global Emissions	Climate Action tracker
1	5	0	3	183 629	0.0%	N/A

SUMMARY

Saint Lucia's national climate framework consists of 1 law, 5 policies and 3 climate targets. Saint Lucia's [National Climate Change Adaptation Policy](#) was passed in 2005 and guides the legislative and policy work on sustainable development in governmental and non-governmental entities. Adaptation actions include building stronger infrastructure and providing finance for these efforts, which is the role of the Climate Adaptation Financing Facility from the Saint Lucia Development Bank. In its updated NDC, Saint Lucia sets a target of a 7% reduction in GHG emissions in the energy sector relative to 2010 by 2030. With population centres and economic activities centred along the coastline, the nation is highly vulnerable to sea level rise and severe weather events.

- Ranked 86 on the Human Development Index.

CONSTITUTIONAL SYSTEM

Saint Lucia is a Commonwealth realm. HM Queen Elizabeth II is Queen of Saint Lucia, represented on the island by a governor-general. The prime minister is normally the head of the party commanding the support of the majority of the members of the House of Assembly, which has 17 seats. The other chamber of Parliament, the Senate, has eleven appointed members.

CONSTITUTION

The constitution was adopted in 1978 and guarantees equality, specifically in regards to race, place of origin, political opinions, skin colour, creed and sex. It states the composition of the Senate and House of Assembly.

CLIMATE POLICIES AT NATIONAL LEVEL

Policies:

[National Environment Policy \(NEP\) and National Environmental Management Strategy \(2004; Revised 2014\)](#). Includes implementation of the National Climate Change Policy and Adaptation Plan.

[Saint Lucia's National Adaptation Plan 2018-2028](#). This National Adaptation Plan details St Lucia's current approach to climate change adaptation. The plan is part of an iterative ten year process and outlines key cross-sectoral and sectoral adaptation measures for the following sectors: Tourism; Water; Agriculture; Fisheries; Infrastructure and spatial planning; Natural resource management (terrestrial, coastal and marine); Education; and Health.

[National Energy Policy 2010](#). 5% of the electricity generated in 2013, at least 15% in 2015 and at least 30% by 2020 will originate from renewable energy sources.

[National climate change adaptation policy \(2005\)](#). The Policy institutes a framework to guide the legislative and policy work on sustainable development of governmental and non-governmental entities involved in Saint Lucia. The Climate Adaptation Financing Facility from the Saint Lucia Development Bank is defined as a prominent financing tool for such efforts. Concrete adaptation actions to enhance the island's resilience include building stronger buildings, roads and bridges. The government shall also support capacity and awareness building activities to enable mitigation pathways.

SUB-NATIONAL LEVEL /ACTION BY STATES OR REGIONS?

What different powers/ responsibilities do states/ regions/ provinces have compared to national governments?

[The constitution makes reference to local government](#) but contains no specific provisions. The main legislative text governing local government is the Constituency Councils Act 2012. Local elections were suspended in 1979, and since then the Minister of Social Transformation, Local Government and Community Empowerment has been responsible for the nomination of all councils. There are 10 administrative quarters within Saint Lucia, which consist of 15 constituency councils. The functions and responsibilities of local government have been discharged by centralised authorities since 1980, and many of the services provided are carried out in tandem with other governmental agencies.

[Saint Lucia's National Adaptation Plan 2018-2028](#). "Essential for planning and implementing effective national, subnational and sectoral adaptation action is the knowledge and understanding of expected impacts and their cascading effects."

NET ZERO TARGET

No target. Updated NDC: 27/01/2021. Saint Lucia's NDC is mitigation-centric and the NDC's target is 7% Greenhouse Gas (GHG) emissions reduction in the energy sector relative to 2010, by 2030.

CLIMATE ACTION TRACKER RATING

N/A

ISSUES & CHALLENGES

From UNDP Climate Change Adaptation: An open fragile economy highly vulnerable to external economic factors; Limited human resources; Limited financial and technical resources. Population centres and economic activities, including tourism, are concentrated along the coast. These are therefore highly vulnerable to the anticipated effects of climate change such as sea-level rise. In addition to temperature, there is also the threat of increased wind speeds. In Saint Lucia, the estimated damage from 12 windstorms (including hurricanes) affecting the island was US\$1 billion or about 106% of 2009 GDP. Climate change is also likely to significantly affect coral reefs.
